OFFICERS OF THE BOARD:

ROBERT BECK, *Secretary*.....Sacramento.

L. A. UPSON, *Treasurer*.....Sacramento.

CONSTITUTION

OF THE

CALIFORNIA STATE AGRICULTURAL SOCIETY.

ARTICLE I.—NAME.

SECTION 1. This Society shall be called "The California State Agricultural Society."

ARTICLE II.—OBJECT.

SECTION 1. It shall be the object of this Society to encourage the cultivation of the soil, and the general development of all the agricultural resources of this State.

SEC. 2. To foster every branch of mechanical and household arts calculated to increase the happiness of home life.

SEC. 3. To extend and facilitate the various branches of mining and mining interest.

ARTICLE III.—MEMBERSHIP.

SECTION 1. *Annual Members.*—Any person who has, during the year eighteen hundred and sixty-five, or who shall, during this year, or any subsequent one, pay into the funds of this Society the sum of five dollars, may become a member of the same; such membership to expire on the thirty-first day of the following December.

SEC. 2. *Life Members.*—Any person may become a member for life by the payment of fifty dollars; or, if already a member, by the payment of forty dollars, and shall thereafter be exempt from all dues and assessments.

SEC. 3. *Honorary and Corresponding Members.*—Any person whom the Board shall propose may be elected an honorary or corresponding member, and shall enjoy, free of charge, all the privileges of the Society, except voting and holding office.

SEC. 4. *Privileges of Members.*—Any citizen of this State, being a member of this Society, shall be eligible to office, entitled to vote, and enjoy the free use of the library, under the rules of the same, and have free admission, accompanied by his wife and minor children, to all the exhibitions of the Society, and shall be permitted to compete for premiums in any or all departments.

SEC. 5. *Expulsion of Members.*—Any member who shall present for exhibition any article or animal which he is not entitled by the rules of the Society to exhibit, or who shall attempt to deceive, or be guilty of a breach of good faith toward the Society, may be expelled by a vote of two-thirds of the members present at any meeting of the Society; *provided, always,* that no member shall be expelled unless written notice of the alleged offense shall have been served on him, or left at his usual place of residence at least twenty days previous to the action.

ARTICLE IV.—OFFICERS.

SECTION 1. The officers of this Society shall consist of a President and nine Directors, who shall constitute a State Board of Agriculture, five of whom shall constitute a quorum. They shall elect a Treasurer and Secretary, not members of the Board. They may also appoint, annually, as officers of the Board, a chemist, a botanist, a meteorologist, a geologist, a metallurgist, an ornithologist, and an entomologist, and define the duties of each. They may appoint such committees on the various departments of agriculture, mining, and manufactures, either generally, or for specific purposes, as they may deem important for the best interests of the State, and require such committees to report the results of their investigations to the Board at such times as may be named by them.

SEC. 2. *Duties of President.*—The President shall preside at all meetings of the Board, and of the Society; shall have power to call special meetings of the Board when necessary, and at the written request of ten members may call extra meetings of the Society; shall appoint all

meetings not otherwise provided for; shall vote only at the election of officers, and in case of a tie; and shall sign all financial and official documents emanating from the Society, and not otherwise provided for. In the absence of the President from any meeting of the Board or Society, any Director may be called to the chair, and during such meeting, and for the completion of any business transacted, or ordered at the same, shall have the same powers as the President.

SEC. 3. *Duties of Secretary.*—The Secretary shall conduct the correspondence of the Society, keeping in a separate book copies of all letters written in the name or on behalf of the Society, holding the same free to the inspection of any member of the Society, at any regular meeting of the same. He shall also receive and file all letters addressed to the Society, holding the same subject to the Board of Directors. He shall attend all meetings of the Society and the Board, keeping a full record of the doings of each in a separate book, and shall furnish a copy of the proceedings of each meeting to the Committee on Publication within five days after the close of such meeting. He shall prepare and publish all notices of meetings, shall keep a roll of all standing committees, and call the same (noticing absences) whenever desired to do so by the Chair: shall sign all certificates of honorary and corresponding memberships, and forward the same to those entitled to receive them. He shall keep, in a book prepared for that especial purpose, the name and address of every member; shall prepare and sign all gratuitous or complimentary cards or tickets of admission; shall countersign all diplomas, certificates of merit, etc., awarded by the Society, and forward the same to their respective claimants. He shall be ex officio Librarian: shall keep the seal, and all the plates, dies, engravings, etc., belonging to the Society, and shall cause to be struck therefrom such medals and impressions as may, from time to time, be required. He shall have charge of all specimens, models, plants, seeds, books, etc., and arrange, prepare, or distribute the same under the direction of the Board. He shall prepare all reports to be made by the Board to the Society, and all reports to be made by the Society to the State. He shall receive all moneys due or payable to the Society, and pay the same to the Treasurer, taking his receipt therefor; shall hold all bonds filed by officers of the Society for the faithful performance of their duty, and all vouchers for every class of expenditure. He shall countersign all drafts ordered by the Board, and all certificates of annual and life membership, and keep an account of the same in a separate book, as they are issued, and shall, in December of each year, prepare a tabular statement of the receipts and expenditures of the Society, according to the law incorporating the same. For which services he shall receive such compensation as the Board shall decide to pay.

SEC. 4. *Duties of the Treasurer.*—The Treasurer shall receipt for all funds at the hands of the Secretary, and shall disburse the same only on the order of the Board, attested by the President and the Secretary. He shall also hold in trust all certificates of stock, bonds, notes, deeds, or other evidences of debt or possession belonging to the Society, and shall transfer, invest, or dispose of the same only by direction of the Society, or by a written order of the Board. He shall, within ten days after his election, file with the Secretary a bond for the faithful performance of his duties; said bond to be approved by the Board, and to be in a sum equal to twice the combined amounts of the funds on hand and the estimated revenue for the year; and shall, at the annual meeting, make to the Society a detailed report of all his doings; for which services he shall receive such compensation as the Board shall, from time to time, decide to pay.

SEC. 5. *Duties of the Board.*—The Board of Managers shall have the general and financial management of all the affairs of the Society in the interim of annual meetings. It shall fill all vacancies occurring between elections, and shall make the necessary preparations and arrangements for all meetings, fairs, exhibitions, etc. The Board shall also have power to make its own by-laws (not inconsistent with this Constitution), and arrange the time and place of its own meeting.

ARTICLE V.—STANDING COMMITTEES.

SECTION 1. *Committee of Finance.*—The Committee of Finance shall consist of three (the President and Secretary being two), whose duty it shall be to audit the Treasurer's account, to examine and approve all bills before they are paid, to have general supervision of the finances of the Society, and to report their doings in full to the Board whenever called on so to do.

SEC. 2. *Library Committee.*—The Library Committee shall consist of three (the Secretary being one), whose duty it shall be to have the general supervision of the library and cabinet, to make all necessary rules and regulations for the government of the same (said rules and regulations being subject to the approval of the Board), to suggest such means for the safe-keeping and enlargement of both the library and cabinet as they may deem expedient, and to make a full report of their doings, together with the state of the department under their charge, at each annual meeting.

SEC. 3. *Visiting Committee.*—The Visiting Committee shall consist of three, whose duty it shall be to visit and examine all farms, orchards, vineyards, nurseries, field crops, mining claims, ditches, mills, etc., which may be entered for competition, and which shall require examination at other times and places than the annual fair: to award premiums for the same according to the schedule, and recommend such gratuities as they may deem proper, and make a full report to the Board at least one day previous to the annual meeting.

SEC. 4. *Committee on Publication.*—The Committee on Publication shall consist of three (the President and Secretary being two), whose duty it shall be to contract for and superintend, under the direction of the Board, all printing and publishing necessary for the prosperity of the Society.

ARTICLE VI.—DONATIONS AND REQUESTS.

SECTION 1. All donations, bequests, and legacies to this Society, designated by the donors for any particular purpose embraced within the objects of the Society, shall be with strict fidelity so applied; and the name of each donor, together with the amount and description of such donation, and the object for which it was designated, shall be registered in a book kept expressly for that purpose.

ARTICLE VII.—MEETINGS AND EXHIBITIONS.

SECTION 1. *Exhibitions.*—The Society shall hold an annual fair and cattle show in the City of Sacramento, and may, at its discretion, hold such other exhibitions as it may deem conducive to the interests of agriculture.

SEC. 2. *Annual Meeting.*—The annual meeting shall be held at the Capital of the State, at such time during the month of January in each year as the Board may designate, at which time all the officers from whom reports of the preceding year's service are required shall present the same, and all officers for the ensuing year shall be elected by ballot; and all officers shall continue in office until their successors are duly qualified.

SEC. 3. *Special Meetings, how called.*—No special meeting of the Society shall be called but upon thirty days' notice in the columns of a newspaper published in each of the Cities of San Francisco, Sacramento, Marysville, and Stockton; nor without a request signed by at least ten members.

SEC. 4. *Proxy Voting.*—It shall not be admissible for any member to vote by proxy in any meeting of this Society, or its Board of Managers.

SEC. 5. *Quorum of the Society.*—At any meeting of this Society, fifteen members (a majority of whom shall represent counties other than the one where the meeting shall be held) shall constitute a quorum.

ARTICLE IX.—OFFICE AND ROOMS.

SECTION 1. The office, rooms, library, and cabinet of the Society shall be permanently located at the Capital of the State.

ARTICLE X.—AMENDMENTS.

SECTION 1. Amendments to this Constitution must be presented in writing at an annual meeting, when, if unanimously agreed to, they shall be adopted: but if there be objection, and a majority consent thereto, they shall be spread upon the minutes and lie over until the next annual meeting, when they shall be read, and if, after due discussion, two-thirds of all the members present vote for the amendments, they shall be adopted and become a part and parcel of this Constitution.

ARTICLE XI.—EFFECT.

SECTION 1.—This Constitution shall take effect from and after its passage.

I certify the foregoing to be a true copy of the Constitution of the California State Agricultural Society, as amended by unanimous consent at the annual meeting of the Society, held on the twenty-eighth day of January, A. D. eighteen hundred and sixty-nine.

ROBT. BECK, Corresponding Secretary.

A COMPILATION

OF ALL THE LAWS NOW IN FORCE RELATING TO OR AFFECTING THE STATE
AGRICULTURAL SOCIETY.

AN ACT

TO INCORPORATE A STATE AGRICULTURAL SOCIETY AND APPROPRIATE
MONEY FOR ITS SUPPORT.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. There is hereby established and incorporated a Society to be known and designated by the name and style of the "CALIFORNIA STATE AGRICULTURAL SOCIETY," and by that name and style shall have perpetual succession, and shall have power to contract and be contracted with, to sue and be sued, and shall have authority to have and use a common seal, to make, ordain, and establish, and put in execution such by-laws, ordinances, rules, and regulations as shall be necessary for the good government of said Society, and the prudent and efficient management of its affairs; *provided*, that said laws, ordinances, rules, and regulations shall not be contrary to any provision of this charter, nor the laws and Constitution of this State or of the United States.

SEC. 2. In addition to the powers above enumerated, the Society shall, by its name aforesaid, have power to purchase and hold any quantity of land not exceeding four sections, and may sell and dispose of the same at pleasure. The said real estate shall be held by said Society for the sole purpose of establishing a model experimental farm or farms, erecting inclosures, buildings, and other improvements calculated and designed for the meeting of the Society, and for an exhibition of the various breeds of horses, cattle, mules, and other stock, and of agricultural, mechanical, and domestic manufactures and productions, and for no other purposes.

And be it further enacted, That if, from any cause, said Society shall ever be dissolved, or fail to meet within the period of two consecutive years, then the real estate held by it, together with all the buildings and appurtenances belonging to said estate, shall be sold as lands are now sold by execution, and the proceeds deposited in the State treasury, subject to the control of the Legislature.

AN ACT

SUPPLEMENTAL TO AN ACT TO INCORPORATE A STATE AGRICULTURAL SOCIETY, APPROVED MAY THIRTEENTH, EIGHTEEN HUNDRED AND FIFTY-FOUR, AND AMENDED MARCH TWENTIETH, EIGHTEEN HUNDRED AND FIFTY-EIGHT.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. The general prudential and financial affairs of the Society shall be intrusted to a Board of Agriculture, to consist of a President and nine Directors, five of whom shall constitute a quorum.

SEC. 2. Said Board of Agriculture shall be elected at a general State Agricultural Convention, to be held at the Capital of the State, in the year eighteen hundred and sixty-three, in the month of March, and in the month of January every year thereafter, to consist of the life members and annual members of the State Agricultural Society and four delegates from each County Agricultural Society within this State, incorporated under the general laws of this State for such corporations, and an equal number from each District Agricultural Society, also incorporated under the general laws of this State for such purposes; said delegates to be chosen at the annual fair or annual meeting of each such Society next preceding the State Agricultural Convention;

provided, said convention to be held in March, in the year eighteen hundred and sixty-three, may admit any person or persons representing any of said County or District Agricultural Societies, as the convention may determine by a majority vote, whether such persons shall have been elected by their respective County or District Societies, as provided in this Act or not.— [*Amended section.*]

SEC. 3. The Board of Agriculture shall, at its first meeting after its election, be divided by lot into three equal portions (omitting the President), one portion to continue in office one year, one portion two years, and one portion three years; one-third of the number, together with the President, to be elected at the State Agricultural Convention annually thereafter; the Directors to hold office three years.

SEC. 4. The Board of Agriculture may, in the absence of the President, choose one of its other members temporary Chairman. They shall elect a Treasurer and Secretary, not members of the Board, prescribe their duties, fix their pay; and the said Treasurer and Secretary shall be subject to removal at any time by a majority of said Board.

SEC. 5. The Board of Agriculture shall use all suitable means to collect and diffuse all classes of information calculated to aid in the development of the agricultural, stock raising, mineral, mechanical, and manufacturing resources of the State; shall hold an annual exhibition of the industry and products of the State; and, on or before the first day of January of each year in which the Legislature shall be in regular session, they shall furnish to the Governor a full and detailed account of all its transactions, including all the facts elicited, statistics collected, and information gained on the subject for which it exists; and also a distinct financial account of all funds received, from whatever source, and of every expenditure, for whatever purpose, together with such suggestions as experience and good policy shall dictate for the advancement of the best interests of the State; the said reports to be treated as other State documents are.

SEC. 6. The Board of Agriculture shall have power to appoint a suitable number of persons to act as Marshals, who shall be, from twelve o'clock noon of the day previous to the opening of the exhibition, until noon of the day after the close of the same, vested with all the powers and prerogatives with which Constables are invested, so far as acts or offenses committed within, or with reference to, or in connection with, the exhibition are concerned.

SEC. 7. The Board of Agriculture may, in its discretion, award premiums for the best cultivated farms, orchards, vineyards, gardens, etc.; *provided*, that said Board shall not audit, allow, or pay any amount exceeding one thousand dollars, in any one year, for traveling expenses of Visiting Committees in examining said farms, etc.; *provided further*, that no person, except practical agriculturists, shall be appointed on said committees.

SEC. 8. It shall be optional with any to whom a premium is awarded to receive the article named, or its equivalent (as affixed), in coin.

SEC. 9. The State Agricultural Society shall have power, at its first annual meeting after the passage of this Act, to make such alterations in its Constitution as shall make it conform to the provisions of this Act.

SEC. 10. All Acts or provisions in conflict with the provisions of this Act are hereby repealed.

SEC. 11. This Act shall take effect from and after its passage.

AN ACT

FOR THE ENCOURAGEMENT OF AGRICULTURE AND OTHER INDUSTRIES, APPROVED MARCH TWENTY-FIRST, EIGHTEEN HUNDRED AND SEVENTY-TWO.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. There is hereby appropriated, out of any money in the treasury not otherwise appropriated, the sum of five thousand dollars for the State Agricultural Society; the sum of three thousand dollars for the Bay District Agricultural Society; the sum of two thousand dollars for each of the following named Societies, viz: The Los Angeles District Agricultural Association; the Santa Clara Valley Agricultural Society; the Sonoma and Marin District Agricultural Society; the San Joaquin Valley District Agricultural Society; the Northern District Agricultural, Horticultural, and Mechanical Society; the Upper Sacramento Agricultural Society; the Siskiyou County Agricultural Society; and the Bay District Horticultural Society; and the California Vine-growers' and Wine and Brandy Manufacturers' Association, for each of the years eighteen hundred and seventy-two and eighteen hundred and seventy-three. Upon presentation of the requisition of the President and Secretary of either of the Societies above named to the State Controller, the Controller shall draw his warrant on the Treasurer in favor of such Society for the amount appropriated to such Society, and the Treasurer shall pay the same. The money so drawn by each Society shall be used for the purpose of paying premiums for the various agricultural, mineral, mechanical, and manufacturing products of this State, and for no other purpose.

SEC. 2. The Directors of each of the above named Societies, except the State Agricultural Society, shall each year report to the State Board of Agriculture the name and post-office address of each of the officers of such Society, on or before the first day of May; and on or before the first day of December of each year they shall report to said Board of Agriculture the transac-

tions of said Society, including the list of articles exhibited and premiums awarded; the amount of receipts and expenditures of the year, and the objects for which the expenditures have been made; the new industries inaugurated and new products produced, and any and all other facts showing the development of the resources of the district embraced in such Society, which they may deem worthy of such report.

SEC. 3. The State Board of Agriculture shall report annually, on or before the fifteenth day of January, to the Governor of the State, the full transactions of the State Society, including the facts and statistics collected and information gained on the subjects for which it exists; also, including the report from each of the above named Societies, or so much thereof as said Board may deem of value for publication.

SEC. 4. The Governor shall cause five thousand volumes of said report of the State Board of Agriculture to be printed each year, at the expense of the State, and paid for as other public printing, and delivered to the State Agricultural Society for general distribution.

SEC. 5. All laws or parts of laws conflicting with the provisions of this Act are hereby repealed.

SEC. 6. This Act shall take effect and be in force from and after its passage.

AN ACT

TO APPROPRIATE MONEYS TO PAY THE PRESENT OUTSTANDING INDEBTEDNESS OF THE STATE AGRICULTURAL SOCIETY, CONTRACTED IN ERECTING THE GRAND STAND, AND MAKING OTHER IMPROVEMENTS TO THE LANDS AND PROPERTY OF SAID SOCIETY, APPROVED MARCH THIRTIETH, EIGHTEEN HUNDRED AND SEVENTY-SIX.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. The sum of sixteen thousand one hundred and forty-one dollars and eighty-nine cents is hereby appropriated, out of any moneys in the State treasury not otherwise appropriated, to pay the outstanding indebtedness of the State Agricultural Society incurred in erecting the grand stand, and making other improvements upon the lands and property of said Society; and the Controller of State is hereby directed and authorized to draw his warrant in favor of said Society, upon the requisition of the President and Secretary of the same, which requisition shall be accompanied with certified copies of the evidences of debt to be canceled equal in amount to the amount of the requisition for the said sum of sixteen thousand one hundred and forty-one dollars and eighty-nine cents, and the Treasurer of State is hereby authorized and directed to pay the same. The money so drawn by said State Agricultural Society shall be used for the purpose of canceling the present outstanding indebtedness thereof, and for no other purpose.

SEC. 2. This Act shall take effect and be in force from and after its passage.

AN ACT

FOR THE ENCOURAGEMENT OF AGRICULTURE AND OTHER INDUSTRIES, APPROVED MARCH EIGHTEENTH, EIGHTEEN HUNDRED AND SEVENTY-EIGHT.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. There is hereby appropriated out of any money in the treasury, not otherwise appropriated, the sum of five thousand dollars for the State Agricultural Society; the sum of fifteen hundred dollars for the Upper Sacramento Valley Agricultural Society; the sum of fifteen hundred dollars for the San Joaquin Valley Agricultural Society; the sum of fifteen hundred dollars for the Golden Gate District Fair Association; the sum of fifteen hundred dollars for the Sonoma and Marin District Agricultural Society; the sum of fifteen hundred dollars for the Northern District Agricultural Society; the sum of fifteen hundred dollars for the Napa and Solano District Agricultural Society; the sum of fifteen hundred dollars for the Santa Clara Valley Agricultural Society; the sum of fifteen hundred dollars for the Southern District Agricultural Society; the sum of one thousand dollars for the Plumas, Lassen, and Modoc District Fair; one thousand dollars for the Monterey County Agricultural Society; one thousand dollars for the El Dorado County Agricultural Society, and one thousand dollars for the Siskiyou County Agricultural Society, for each of the years eighteen hundred and seventy-nine. Upon the presentation of the certificate of the President and Secretary of either of the Societies named above to the State Controller, that such sums have been expended in premiums in accordance with the provisions of this Act, at a fair held during the year eighteen hundred and seventy-

eight and eighteen hundred and seventy-nine, the Controller shall draw his warrant on the Treasurer in favor of such Society, for the amount appropriated to such Society, and the Treasurer shall pay the same. The money so drawn by each Society shall be used for the purpose of paying premiums for the different kinds of live stock, and the various agricultural, mineral, mechanical, and manufacturing products of this State, and for no other purpose; and no part whatever shall be given in any contingency in purses for horse-racing.

SEC. 2. The Directors of each of the above named Societies, except the State Agricultural Society, shall each year report to the State Board of Agriculture the name and post-office address of each of the officers of such Society, on or before the first day of May; and on or before the first day of December of each year they shall report to said Board of Agriculture the transactions of said Society, including the list of articles exhibited, and for which premiums were awarded; the amount of receipts and expenditures of the year, and the object for which the expenditures have been made; the new industries inaugurated, and new products produced, and any and all other facts showing the development of the resources of the district embraced in such Society which they may deem worthy of such report.

SEC. 3. The State Board of Agriculture shall report annually, on or before the first day of February, to the Governor of the State the full transactions of the State Society, including the facts and statistics collected and information gained on the subject for which it exists; also, including the report from each of the above named Societies, or so much thereof as said Board may deem of value for publication.

SEC. 4. The Governor shall cause five thousand volumes of said report of the State Board of Agriculture to be printed each year, at the expense of the State, the cost not to exceed one dollar per volume, and paid for as other public printing, and delivered to the State Agricultural Society for general distribution.

SEC. 5. All Acts and parts of Acts in conflict with the provision[s] of this Act are hereby repealed.

SEC. 6. This Act shall take effect and be in force from and after its passage.

ANNUAL REPORT

OF THE

BOARD OF DIRECTORS.

To the Members of the State Agricultural Society :

GENTLEMEN: In presenting their annual report, the Directors of the State Agricultural Society congratulate the members thereof, and the people of the State generally, on the prosperous condition of its management, and the usefulness which has attended its progress during the year just closed. It was supposed that the natural and unavoidable drawbacks attendant upon a dry season would have the effect of greatly weakening, if it did not entirely exhaust, the vitality of the Society; but, on the contrary, and in testimony of the oft-repeated expression that "all signs fail in dry weather," the fair of eighteen hundred and seventy-seven was one of the most successful ever held in the State, exceeding in a marked degree the revenue of the one held in eighteen hundred and seventy-six. More and increased interest seemed to be manifested in the well-being of the Society, and every effort was put forth by all classes to add to its importance and place it upon a strong foundation. During the year improvements have been made on the grounds of the Society at Agricultural Park, which cannot fail to conduce to the comfort and convenience of those exhibiting stock at its fairs, as well as to add to the pleasure of those visiting the Park upon such occasions. The grounds referred to are in thorough and complete order, and will present advantages at the coming and succeeding fairs never before vouchsafed those attending them. This, of course, has involved a great deal of attention and labor, and a heavy outlay of money. A handsome and broad avenue has been constructed around the grounds, in order that visitors may reach and examine the stock without being inconvenienced by vehicles; and a walk has been constructed to the east side of the Park, which, for ladies and children, will be found to be of great advantage.

In making this report it must of necessity be very brief, for the reason that the Legislature restricted us to such an extent in its preparation, confining us to one hundred pages in all, that any allusion to the industries and products of the State must be so meagre as almost to render them unintelligible. There are many things in connection with the welfare and progress of the society, and agricultural interests generally, in regard to which we would like to speak elaborately, but, for the reason just stated, we are debarred from so

doing. While it may be in the interest of economy thus to restrict a full and detailed account of the agricultural condition of the State from being published in the annual report of the State Agricultural Society, it seems to us to partake of that kind of economy which savors too much of the penny-wise and pound-foolish system. And we deem it of sufficient importance thus to direct public attention to the difficulty under which we labor by reason thereof. In our judgment the State of California can well afford an annual outlay in the publication of the reports of the State Agricultural Society. We dwell upon this matter more particularly for the reason that the demands upon our Secretary for volumes of our proceedings from the Eastern States, and particularly from Europe, are constant, but on account of the paucity of the information therein contained it has been considered better for the material interests of the State not to comply in many cases. We respectfully invite the attention of the members of the present Legislature to this condition of affairs, and ask that the restriction, heretofore imposed upon us in the publication of the annual report of the Society, be removed entirely, or so modified as to render the document of some interest to those abroad, and beneficial to the best interests of the State. At the present time the entire issue is an edition of one hundred pages of one thousand copies, but two hundred and fifty of which are apportioned to the Society. The issue, to be of any value, should be five thousand copies of five hundred pages.

The average quality of wheat raised during the season was fair. The crop of barley was satisfactory, and generally good prices were obtained; the quantity produced, however, as with wheat also, was far below the yield of the preceding year, a fact easily accounted for by the extreme dryness of the season. In eighteen hundred and seventy-six there reached San Francisco ten million five hundred and sixteen thousand nine hundred and thirteen centals of wheat produced in the State; and in eighteen hundred and seventy-seven, five million one hundred and fifty-nine thousand four hundred and ninety-four centals, a falling off of fifty per cent. In eighteen hundred and seventy-six one million six hundred and twenty-six thousand and sixty-six centals of barley produced in the State reached San Francisco; and in eighteen hundred and seventy-seven only seven hundred and seventy-five thousand seven hundred and thirty-nine centals, showing a falling off similar to that of wheat. The season of eighteen hundred and seventy-seven was an unusually dry one, not a drop of rain falling in many grain growing portions of the State. This year the prospects are very bright. The rain in almost every instance has fallen just as needed through the season, gradually and beneficially culminating in settled showers, bringing a copious supply of the life-giving nourishment. There is every indication of a prosperous future so far as the productions of the State are concerned, thus strengthening every calling and business.

The product of wool in eighteen hundred and seventy-seven bears favorable comparison with that of the preceding year, as in eighteen hundred and seventy-six one hundred and sixty-seven thousand six hundred and one bales reached San Francisco, and in eighteen hundred and seventy-seven one hundred and forty-six thousand six hundred and fifty-nine bales. The falling off here, while it is large, was not so disastrous as with the cereals, although the destruction of sheep, arising from want of proper nourishment, was very large,

thousands falling by the wayside. The prices of wool averaged higher in eighteen hundred and seventy-seven than in eighteen hundred and seventy-six. The exports of wool, by land and sea, amounted in eighteen hundred and seventy-seven to forty-nine million nine hundred and sixty thousand and nine pounds, and in eighteen hundred and seventy-six to fifty million eight hundred and thirty-seven thousand nine hundred and ninety-seven pounds, being a decrease of only eight hundred and seventy-seven thousand nine hundred and eighty-eight pounds.

The Board of Directors of the State Agricultural Society respectfully recommend to the Legislature now assembled the usefulness of making liberal appropriations to all of the Agricultural Societies of the State, so as to enable them to give larger premiums than heretofore, arousing an increased interest on the part of the people.

To the Honorable Board of Directors of the State Agricultural Society of California:

GENTLEMEN: We, the undersigned committee, appointed to examine the financial report of the State Agricultural Society for the year eighteen hundred and seventy-seven, respectfully represent that we have compared the same with the books of the Society and find it correct.

All of which is respectfully submitted.

W. R. CANTWELL, }
T. M. LINDLEY, } Committee.
ERSKIN GREER, }

January 27th, 1878.

OPENING ADDRESS

OF

HONORABLE MARION BIGGS, PRESIDENT OF THE CALIFORNIA STATE AGRICULTURAL SOCIETY.

DELIVERED AT THE TWENTY-FOURTH ANNUAL FAIR OF THE SOCIETY,
SACRAMENTO, SEPTEMBER EIGHTEENTH, EIGHTEEN HUN-
DRED AND SEVENTY-SEVEN.

Twenty-eight years since, in eighteen hundred and forty-nine, California commenced to cut a prominent figure in the commerce of the nation. That year the net imports of the nation amounted to one hundred and thirty-four million seven hundred and sixty-eight thousand five hundred and seventy-four dollars, and the exports of domestic products amounted to one hundred and thirty-two million six hundred and sixty-six thousand nine hundred and fifty-five dollars. Excess of imports twenty-one million one hundred and one thousand six hundred and nineteen dollars. Total amount of foreign commerce of the nation two hundred and sixty-seven million four hundred and thirty-five thousand five hundred and twenty-nine dollars. Last year the net imports of foreign goods amounted to four hundred and fifty-five million four hundred and seven thousand eight hundred and thirty-six dollars, an increase of nearly three hundred per cent., while the exports of domestic produce amounted to six hundred and forty-four million nine hundred and fifty-six thousand four hundred and six dollars, an increase of about four hundred per cent. Excess of exports over imports one hundred and eighty-nine million five hundred and forty-eight thousand five hundred and seventy dollars, which excess is greater than either the exports or imports twenty-eight years ago, showing a remarkable progress in production throughout the country. Total value of foreign commerce of the nation in the year eighteen hundred and seventy-six, one billion one hundred million three hundred and sixty-four thousand two hundred and forty-two dollars, an increase of eight hundred and thirty-two million nine hundred and twenty-nine thousand seven hundred and thirteen dollars over the foreign commerce of eighteen hundred and forty-nine. To this increase California contributed directly through its own ports, last year, one hundred and fifty million dollars, that being in round numbers the value of her direct exports and imports, and full fifty million dollars through Eastern ports; in all, two hundred million dollars. So that nearly one-fourth of the increased foreign commerce of the nation is due to California alone, while only a little over three-fourths is due to the remaining thirty-seven States and the Territories. California contributed to the commerce of the country, last year, within sixty-seven and a half millions of the entire commerce of the nation when this State began its existence. Just think of it—the foreign

commerce of this State alone now amounting to almost as much as the entire foreign commerce of the country in the year when California made its first appearance in the world of commerce. The history of the world does not produce such another remarkable and astonishing example of progress. Twenty years ago we were importing bread stuffs. Last year we exported over twenty-three million dollars worth of wheat and flour.

In eighteen hundred and sixty-six we raised only fourteen million bushels of wheat. Last year we produced thirty-two millions of bushels. We now import food which we should not import, such as hams, bacon, pickled pork, butter, and cheese.

But our exports of food in the shape of wheat, barley, canned salmon, etc., for last year, aggregated over thirty-one millions of dollars; so that, after paying a half a million of dollars for food, as articles imported, we had a surplus of thirty and a half millions of dollars worth of food to supply other people. Adding the value of wine and wool exported, last year yielded thirty-two and a half millions of dollars more than was required to feed the home population.

The market for our fruit products is rapidly extending. Our dried and canned fruits stand high in the Eastern States, also in England, and I am informed by some of our most experienced and intelligent fruit growers that there will always be a good market for all of our surplus fruit, if of a good quality, and properly prepared, because of the good reputation it has already acquired abroad. This is a fact most encouraging to our orchardists, and indicates the manner in which our foothills may be utilized, and made to contribute largely to the wealth of the State.

Our wheat production in eighteen hundred and seventy-six was over eighteen million centals, and we exported over thirteen million centals, all the product of our own State. And look at the amount of barley exported. From the best information we can obtain, there was on hand the eighteenth day of January, eighteen hundred and seventy-seven, three million six hundred thousand centals. The crop of barley was unusually large in eighteen hundred and seventy-six. Our yield for this year will fall short in some portions of the State, but, with the surplus of the last year's harvest, we will have quite a surplus for export, and with the present prices the farmers can have no grounds for complaint. While we sympathize with farmers in some portions of the State, we must congratulate farmers in other portions for the very large crops they have raised, and the fine price they have obtained for the same, as the amount received from the sale of our cereals this season will be equal if not greater than any former season; and the amount of corn raised is rapidly proving that we can produce a very fine article with proper cultivation; and as to vegetables, there is no portion of the globe which can excel us in the production of the same.

LIVE STOCK INTEREST—OUR HORSES.

Take the noble thoroughbred horse, and see what improvements have been made in the past fifteen or twenty years from our mustang that ran wild over our plains. The Clydesdale and the noble Norman, and the Percheron horse come in to take the place of the wild mustang. The farmers in them have something. They can rely on them when harnessed and hitched to a wagon or an agricultural

implement. They know that they have a domestic animal by which they can till their soil.

MULES.

I cannot recommend these valuable animals too highly, for they are far better for the rancher or farmer than the horse, where they have to depend on hired help, as they require less attention, and are less liable to disease, and can stand the heat much better.

SHORTHORNS, OR BEEF CATTLE.

We have certainly excelled any State or country in our cattle. Twenty-five years since we had nothing but the Spanish cattle here, excepting what few American cows were brought across the plains by emigrants. The raising of cattle was all done by the natives. We now challenge the world with our shorthorns. We have the finest beef cattle in the world. Yes, when our neighbors, the Japs, come all the way from Japan, go to New York and examine the finest herds in the Atlantic States, they return to California and purchase their cattle and horses in this market, showing to the world that we can produce the best animals that stand on hoof. Alderneys, Jerseys, Devons, Herefords, Ayrshires, Holsteins, and Holderneys, all have their advocates for their fine quality of milk, and the fine quality of butter and cheese made from the same. They certainly stand very high in the estimation of the public of this coast, and I would advise every family to try one of those fine milch cows. One great beauty about them is they are so gentle and kind, as well as useful.

OUR WOOL.

Allow me to show the amount of wool produced in this State during the past six years:

1871—pounds	22,187,188	1874—pounds	39,356,781
1872—pounds	24,255,468	1875—pounds	43,532,323
1873—pounds	32,155,169	1876—pounds	56,550,977

The improvement in quality has kept pace with the production, and our California wools are sought after to the preference of others in the Eastern markets.

A VARIED AGRICULTURE.

The subject of a variety of agricultural production has been made the theme of discourse in addresses before Agricultural Societies of the State, and in the current agricultural literature. The varied soils and climates of California naturally suggest a variety of agricultural and horticultural productions. In her semi-tropical climate we know that semi-tropical fruits may be cultivated with profit. In our foothills and the higher altitudes of the mountain ranges the productions of the temperate zone may be grown. We have successfully introduced here a greater variety of production than may be found in the States of the Mississippi Valley. To my mind the question is, what is profitable? Every country is adapted by nature to a specific class of productions, and men are wise when they follow the suggestions of nature. California is specially adapted to the growth of

the cereals; and the largest returns to agriculture will be found in their growth. Some attempts have been made at cotton growing. Some efforts have been made to introduce the culture of tea and coffee; but these experiments, while moderately successful, have been attended by loss when compared with the results which would have been attained in the culture of cereals. I would not discourage in the slightest degree any experiment in the direction of varied agriculture; but I desire to invite your attention to the more practical phases of this subject. The chief agricultural feature of this State is, and for many years will continue to be, wheat and barley. If the lovers of progress in this field of industry complain, let them remember that profit is very largely the end and aim of activity and industry. A hundred acres of land devoted to wheat raising will yield more actual return than the same acres devoted to the raising of cotton or tea; therefore, if these acres are devoted to the latter productions, they are so devoted at an aggregate loss to the commonwealth. The exchange value of our cereals will be found to exceed the value of other products, the cultivation of which is as yet experimental. So long as we may purchase with the wheat grown upon an acre in California more cotton than would grow upon that acre, it will be wise and judicious to grow the wheat and purchase the cotton. This standard should be applied to all productions. Every acre should be devoted to the production of that commodity which will bring the largest reward to the cultivator of that acre.

I am not ignoring the value of a rotation in crops to the preservation of the fertility of soils, but I would have this principle applied only to that extent consistent with a scientific agriculture. It cannot be denied that to wring from the unwilling soil a meager product, when that soil would produce abundantly of some other product exceeding in value, is unwise. The experiment is a proceeding which, sooner or later, would impoverish the commonwealth. If, by the growing of wheat and barley, to which our soil and climate are specially adapted, we can purchase more tea, more cotton, more sugar, more rice, than might be grown upon the same area, it is wise economy to adhere to the growth of the cereals. Another advantage to us in the growth of cereals will be found in the character of the markets afforded to us by becoming large producers in one line. The large quantities of wheat produced in this State tend to organize the markets in our favor. So long as we may be depended upon to produce a large surplus of breadstuffs, we discourage that line of production in other parts of the world; transportation accommodates itself to our wants and necessities, and the markets of the world look to us for a supply. An example of this was found in the large cotton production of the Southern States. History does not afford another example of such wealth-producing power as was exhibited in the cotton product of those States. Prior to eighteen hundred and sixty-one the chief source of the world's supply of cotton was found in the Southern States. With the disorganization of the system of labor in that country, and the cessation of supply during the war, originated the growth of that staple in other countries under a stimulus which rapidly developed, until to-day comparatively a small proportion of cotton is supplied by our country.

A true economy will impel us to employ all our lands in the direction of their highest capacity for production. We have lands better adapted to grazing than to the raising of cereals. We have other lands

better adapted to the growth of fruits and vegetables. Wherever this is the case, we should follow the suggestion of nature in adopting a varied agriculture. The lesson I would convey by these considerations may be briefly summarized: The soil and climate of different countries differ. Each and all should be devoted to that product which returns the highest reward for the labor. Commerce is the hand-maiden of production. It admits of the growth of every product in the climate and soil best adapted to their growth. The waving corn fields and the yellow harvest of the Northern States yield untold wealth to the farmer, because those products are interchangeable with those of the rice fields, the cotton, and the sugar plantations of the South. The acres in the temperate zone devoted to the production of tropical fruits and plants, and the acres in the tropics devoted to the growth of temperate productions, are each and all wasted acres, and the labor bestowed upon them misdirected labor. A varied agriculture will arise in California, but its development should be slow and judicious. It will come too late only if the suggestions which are found in the soil and the climate are unheeded. It will come too soon if profitable agriculture be abandoned for unprofitable experiment.

I now propose to detain you a few moments on the education of the youth of our country.

AGRICULTURAL EDUCATION.

The question of agricultural education ought to engage the attention of our Society far more earnestly than it has hitherto done. The reports from the Agricultural Societies of other States show that they are fully alive to the duty of cherishing institutions for the practical training of youth in the noble calling we, as a Society, are organized to improve. There can be no more certain way to promote the interests of agriculture than placing our children in schools where the leading object is to make intelligent farmers, and to show that farming can be made as intellectual and as agreeable as any other business.

The example of the State of Massachusetts is worthy of imitation in California. The State Agricultural Society said to the Legislature, give us a fair proportion of the income of the grant of Congress for the benefit of agriculture and the mechanic arts, and of such other funds as the State may provide for carrying out the purpose of the grant. Let us have the control of a college intended for our benefit. Do not tie us up in an unnatural marriage with some literary college, but leave us free to develop this one in direct relation to the needs of our future farmers. The Massachusetts farmers had their way—and the leading farmers of Massachusetts—the leading horticulturists were chosen as Trustees, and the result has been hundreds of skillful, educated farmers in the State. So they did in Kansas. I see in their official report they say that they will not “repeat the experiment of flying a literary kite with an agricultural tail, because, though a pleasant regential and professional amusement, and attractive to an immediate locality, there is not a cent of money in it for the industrial student, whose money pays for the kite.” The report of the Michigan State Agricultural Society is very important and suggestive on this subject. “Do colleges and uni-

versities educate farmers," they ask. The answer is, "No, they educate men away from the farm."

Summary of occupations of the graduates of Michigan Agricultural College, from State Reports, eighteen hundred and seventy-six:

Farmers	42	Physicians	2
Fruit culturists	7	Lawyers	6
Engineers	4	Clergyman	1
Mechanic	1	Editors	2
Machinists	2	Students of law	7
Apiarist	1	Students of medicine	3
Druggists	4	Grocers	2
Professors and instructors in other agricultural colleges	11	Merchant	1
Teachers	13	Deceased	4
Students in special sciences	3	Total	124
Clerks, agents, etc.	8		

These statistics do not vary materially from those of other colleges strictly agricultural, as Maine, Massachusetts, Iowa, and Kansas.

Do colleges graduate farmers? No; they educate men away from the farm. Of six hundred and twenty-two graduates of Harvard in twenty-four years, whose callings were known, not one was put down as an agriculturist. Of one thousand seven hundred and seventy-two graduates of Yale in twenty years, whose occupation was known, sixty-one were farmers. Of one thousand two hundred and fifty-four at Dartmouth, not one. Of all together, less than one and one-half per cent.—[Report of Michigan State Board of Agriculture.

The result of these efforts to create a truly agricultural school appears in the fact that in place of the one and one-half per cent. of graduates going to farming, as from other colleges and universities, forty-two per cent. have gone to farming, fruit raising, and the nursery business, as their chief and only business. Diligent inquiry has failed to make it appear that the students imbibe any habits of extravagance, or of a theorizing practice, as some have feared. All the graduates stand respectably in their several callings, and not a few of them very high.—[President Abbott, before the Michigan House of Representatives.

Professor Joseph Harris, so well known as a scientific writer in the *American Agriculturist*, as editor of the *Geneva Farmer*, and as one of the best practical farmers in the State of New York, says:

When I was appointed Professor of Agriculture in Cornell University. I visited the Michigan Agricultural College for the purpose of ascertaining their method of conducting experiments. I wanted to see what they were doing, and how they did it. As yet our Agricultural Colleges had done very little for agriculture. Their work had been theoretical and had settled nothing, etc. The Michigan Agricultural College is an exception to this dark picture. It now stands at the head of all similar institutions, and is an honor to the State and the country at large. Their work has been planned with great thought; theirs are not haphazard experiments. We want truth, and this the Michigan Agricultural College gives us.

These examples might be increased, but as the point under consideration is the duty of this Agricultural Society to the agricultural education of this State, I think enough has been said to show that this duty has been neglected, and that while the income of the Congressional grant for the benefit of agriculture and the mechanic arts, now amounting to fifty-six thousand dollars per annum, is amply sufficient to give us such a working agricultural college as they have in Michigan and Massachusetts, we are ourselves to blame for being without one. It can hardly be questioned that the influence of rural surroundings is better calculated to foster a love for their pursuits than those of large commercial cities, and that the time has come when the relative importance of the agricultural interest to the State makes it desirable to establish at least one institution wholly devoted to instruction in this business. Without impugning the motives of

any of the officers of the University, either Regents or Faculty, the testimony of the latter that there are few if any students in the agricultural course, and the undeniable fact that other large and influential organizations of farmers and mechanics in our State have so repeatedly and publicly expressed their dissatisfaction at the results thus far presented, indicate that something further should be done to bring agriculture and education into a close and vital contact with each other. During the last University year two out of three hundred and five students were in the agricultural department. It would seem from the reports that the proportion has been diminishing rapidly since the occupation of the permanent site at Berkeley. Out of one hundred and twenty-eight, the total number of graduates, eleven have taken the agricultural degree; but of this number less than one-half are engaged in agricultural pursuits. As it would manifestly be hopeless, even if it were desirable, to change the direction of University education towards the leading industries, is not the inference a just one that a separate school or college, managed by agriculturists, for the training of the large numbers who must work for a living, who must maintain the habits of working men while at school, would be for our advantage? Notwithstanding that University tuition is free to the student, the cost of maintenance and the growing expensiveness of college life deter many who would resort to the rural agricultural school.

From England, France, Germany, Austria, we have evidence of the immense practical advantages of agricultural education in hundreds of colleges and rural or regional agricultural schools. There is no lack of students. There are no complaints of results. The statistics of the Agricultural College of Virginia, for the last three years, furnish the most convincing proofs of the value of a training school of practical agriculture.

ANNUAL ADDRESS

DELIVERED BEFORE THE STATE AGRICULTURAL SOCIETY, AT SACRAMENTO, ON THURSDAY EVENING, SEPTEMBER TWENTIETH, EIGHTEEN HUNDRED AND SEVENTY-SEVEN.

BY HON. N. GREENE CURTIS, OF SACRAMENTO.

MR. PRESIDENT, LADIES, AND GENTLEMEN: Since your last annual meeting another year has come and gone. Its stirring events and vicissitudes are of the past. The hopes it awakened, and the sorrows it produced, the joys and blights it brought, and the tears that it started or dried, are swept away from us forever. But we have come together for the purposes of the present and the future. It is pleasing to indulge in retrospects, but only useful as we apply them to the great duties and labors of life. It is the fiat of omnipotence that our passage through life should be made with a velocity apparently increasing in geometrical ratio. The day, the week, the month, the year, each seems but a tithe of its predecessor. Opening with the star of hope, each marks its meridian with the hand of toil, and crowns its close with the fruition of its morning dream, or with a lesson upon the uncertainty of human anticipations. The indomitable energy, the unflagging enterprise of our people, leaves little chance of hope, while our perseverance and industry secures to us a more desirable fruition than other less favored communities, and frees us from drinking of the cup of sorrow, or treading the barren waste of disappointment. We meet annually to correct the errors of the past, to merge personal views in congregated wisdom, to bury prejudice, and by the electric current of fraternal feeling to cancel space and fuse the whole body into a living mass, so that with one heart and one soul we may enter upon the duties of another year consecrated anew to the service of the State and to the happiness and prosperity of the people. Coming together with such views, and animated by the prospects of a glorious fruition, believed to be within the reach of human achievement, let us earnestly seek, as with one heart and one purpose, to devise means the best calculated to forward the grand objects of this Society. After the vicissitudes and changes of the year it is fit that we return thanks to the Supreme Ruler for the inestimable blessing so bounteously bestowed upon our beloved commonwealth. By His favor we have been protected from danger, disease, and death, and we are permitted once more to assemble in peace, happiness, and prosperity. Here, to-day, we meet to promote the happiness of each other, and to advance the interests of the State. Here, to-day, all asperities are dissolved, all distinctions are done away, geographical lines are obliterated, sectional jealousies are forgotten, political strifes and discord are hushed, and here we renew our friendships and pledge our energies to the support of the great agricultural and industrial interest, protected and fostered by

this Society. Permit me, Mr. President, to congratulate you and this Society upon the evidences everywhere displayed of the prosperous condition of the Society, and the unbounded resources of this commonwealth. The heart of every Californian wells up with joy and gladness at these evidences of our material wealth, our present prosperity, and the brilliant prospects of our future grandeur and glory.

Away out here, in the Golden State, upon the western verge of the continent, we have built our homes and erected our altars, where the sacred incense of liberty burns so brightly to-day that its brilliant glare and genial warmth are seen and felt all over the civilized world. Blessed in the enjoyment of a climate unsurpassed by any on earth; all that is grand, beautiful, and picturesque in scenery; a soil zealous, rich, and fruitful, yielding in profusion and lavish prodigality corn, wine, and oil for nourishment, refreshment, and joy; the bountiful yield of all the products of the soil; the luscious fruits of every variety; the vegetable productions, unequaled by any land on earth; the grape, the orange, the fig, the lemon, and citron grow and flourish side by side. With our great variety of climate, which enables us to cultivate all the products of the temperate and semi-tropical, and many of the tropical zones, there is a boundless future of prosperity for the agriculturist of California to look forward to, and we may well hope that our State will, at no distant day, furnish to the world, in rich profusion, wheat, rye, oats, barley, Indian corn, potatoes, buckwheat, hay, tobacco, rice, sugar, hemp, silk, flax, cotton, honey, cheese, butter, wine, and wool. Your wheat, wool, and wines already constitute important elements of wealth and prosperity, and your fruits, both fresh and dried, are constantly increasing in demand and supply, adding comfort and wealth to those engaged in this important branch of industry. The great variety and superior quality of the products of your vineyards, orchards, and farms; the grand display of your thoroughbreds, roadsters, and draft horses; the magnificent exhibition of animals, as specimens of your herds and flocks, challenge universal admiration. All these subjects, of so much interest and importance to the people, have been so eloquently and cogently presented by President Biggs, in his opening address to the Society, that he has left but little corn in the stubble for the benefit of the gleaner, and the sheaf not preserved will drift away, a grain of chaff before the wind. The inventive genius of California's mechanics and artisans is everywhere seen and appreciated, and all honor to them for their enterprise and industry, so materially contributing to the happiness and comfort of the people, and advancing the wealth and prosperity of the State. Our fair country women, co-workers with us in the development of our resources, have added to this splendid exhibition an attractive display of their handiwork, and they deserve, and should receive, the thanks of this Society for their grand display of patient toil and delicate skill in the various industries which they so happily represent.

Gentlemen of the State Agricultural Society, all the great industrial pursuits that enrich, refine, and elevate the citizen, are, in a great degree, confided to your care. Discharge the sacred duty in the future as you have in the past, and a prosperous, happy people will ever cherish your memories with pride and gratitude.

Agriculture, the highest and grandest of all industrial pursuits, is, nevertheless, dependent upon other interests and industries for success and prosperity. Agriculture, commerce, and population, consti-

tute the wealth and sovereignty of the State. Our Harbor of San Francisco, the largest and safest in the world, affords anchorage for the navies of every nation on earth. The enterprise and intelligence of our merchants, inviting trade and encouraging commerce, are now in the full enjoyment of a trade with the nations of the East—a trade that has enriched every nation that has ever possessed it. It is rapidly adding wealth to the State and to the nation, and building up our great commercial emporium down by the sea.

The rich mineral resources of the State, yet scarcely developed, remain a source of unbounded wealth, yielding up its rich treasures to the intelligent, persevering, industrious miner.

Nature, prodigal in her rich legacies, has given us grand, flowing rivers, filled with life-giving waters, flowing through vast regions of now barren and unproductive land. Under proper restrictions, with careful and honest management, this water can be utilized and distributed over millions of acres, and, by its fructifying influence, abundant crops can be raised, causing the desert to bloom as the rose. Our commonwealth, far from the civilized world, unblazed by the troubles and prejudices that control or vex it; uninfluenced by those daily occurrences which brighten or cloud its sky; rich in that which invites the intelligent, hardy, energetic, and adventurous from other lands; and among the thousands that have been scattered like grains of gold, scarce thinking that there was another and a nobler mission than gathering the shining ore, they have found homes among us, and the asperities that parted them from us, born of national prejudices, have been dissolved by our friendship, and in their new-found homes, from the fullness of their hearts, they bless us, and reverence the free and enlightened government under which we live.

Surrounded as we are by all the elements of a rich, luxurious, glorious life, many of our people are without homes and without employment. The hoarse mutterings of discontent are heard growing loud and fierce. The demand for labor and a just compensation for honest toil, the apparent conflict between capital and labor, the stagnation of trade, the derangement of the currency, our industries crippled, and the demands for money, are all questions that should demand the careful attention and serious consideration of every lover of his country. The farmer, the capitalist, the laborer, the mechanic, the merchant, and the manufacturer, are all vitally interested in the proper and harmonious solution and adjustment of these momentous questions. The causes producing this unhappy condition of affairs are numerous, and their discussion at this time would be ill-advised.

The unwise policy adopted in our public land system is now yielding its harvest of misery and want. The millions of acres of rich agricultural lands within our borders are in the hands of a few proprietors, and can only be obtained at exorbitant prices—prices beyond the reach of the poor man who desires them for agricultural purposes. These lands should have been held sacred for the benefit of the actual settler under preëmption and homestead laws, thereby enabling every farmer to own the soil that he tills, for it dignifies and ennobles his manhood, it intensifies his patriotism, and adds an interest in the welfare and prosperity of his fellow-men. It would build up a thriving, industrious husbandry all over the land, adding permanent wealth to the State, and prosperity, happiness, and plenty to the citizen. Then those out of employment and homeless in the

crowded cities would find constant work and fair compensation, or would themselves become farmers, cultivating their own soil, supporting themselves and their families, and gradually but surely accumulating wealth, and surrounding themselves with all the comforts and blessings of a refined civilization. The owners of small farms, who generally labor themselves, pay no rent, so that nearly the whole of their products remain to themselves as the reward of their labor. This class of farmers can afford to pay high wages to farm hands, because they are more than repaid by their increased products. The high wages, if land could be obtained at cheap rates, would soon enable the laborer himself to become a proprietor and a competitor in the labor market, and this competition would force the rate of wages to a high figure, for then abundant crops would warrant increase in expenditure.

Our young, happy, prosperous commonwealth, robed in republican simplicity, modest and unpretending, cherishing the arts and sciences, gradually growing in wealth, honor, and prosperity, cultivating a pure, enlightened, Christian civilization, has attained a proud position among the sister States of the American Union.

With all her elements of greatness and grandeur, her gallant sons, her lovely women, her working men, her cosy cottages, her stately mansions, her happy homes, her lovely daughters, her comely matrons, her churches, her colleges and public schools, her looms and anvils, her mechanics and artizans, her thrifty, intelligent, enterprising farmers, all speak in eloquent and thrilling tones of her present importance and her future greatness. Her swift coursers of internal trade whizzing through valley and cañon, over hill-top and mountain, rousing dreamy nature and awakening glad echoes all over the land, annihilating space and bringing us in daily intercourse with the most remote sections of the State. The vivid lightning, pinned to the iron cord, marks its fiery track along the wires, flashing intelligence from ocean to ocean, plunging through the briny waves and speaking to millions beyond the sea. Her lowing herds and bleating flocks; her vine-clad hills; her vine-yards, orchards, and her golden grain, waving in rich luxuriance to gladden the heart of the husbandman; staunch merchantmen, that skim the waves of every sea, fold their broad, white wings within the Golden Gate; the keen ring of the hammer, the roar of the forge, and the buzz of the saw, the stalwart arm of enterprise delving in the mountain side, yielding up the precious ores, rewarding the hardy sons of toil; her statesmen faithfully guarding her rights, her liberties, and her Constitution; her citizen-soldiery, ever ready to defend her honors; a fearless, independent press, the faithful sentinel on the watch-tower of liberty, ever ready to sound the alarm and to arrest aggression upon the rights and liberties of the people—all attest her glory and her enterprise, her prosperity and safety, and proclaim her the "Queen" of States, the nursery of the arts and sciences, the promoter of industries, the home of luxury and refinement, and the cornucopia of the world.

May the destiny of our beloved State still continue to be guided, guarded, and protected by an all-wise Providence, to a future, grand, glorious, sublime, and our prayer shall ever be :

Great God, we thank Thee for this home,
This bounteous birth-land of the free;
Where wanderers from a far may come
And breathe the air of liberty.

Still may her flowers untrampled spring,
Her harvest wave, her cities rise;
And yet, till time shall fold her wing,
Remain earth's loveliest paradise.

ANNUAL ADDRESS

DELIVERED BEFORE THE SONOMA AND MARIN AGRICULTURAL SOCIETY,
AT PETALUMA, SEPTEMBER TWENTY-SEVENTH, EIGHTEEN
HUNDRED AND SEVENTY-SEVEN.

BY MARCUS D. BORUCK, OF SAN FRANCISCO.

MR. PRESIDENT, LADIES, AND GENTLEMEN: "What do *you* know about farming?" was the question asked me by a friend who had seen the announcement that I was to have the honor of delivering the annual address before the Sonoma and Marin Agricultural Society. I reflected an instant, and answered: "As much as men in my position usually know, I believe." The question kept haunting me, however, and the reflection of an instant growing into the reflection of a day, bore such fruit of difficulties to be met, and ideas to be discussed, that I actually felt dismayed at the task I had so confidently undertaken. Your invitation had pleased me as a new toy pleases a child, but when, instead of a toy, I found I had an intricate and important piece of mechanism to handle, pleasure changed to anxiety, and there arose hesitation of moment—momentous, not momentary—whether to give or give up the address. Long before I come to "And now, in conclusion, Mr. President, and ladies, and gentlemen," you will easily have arrived at your decision whether the merits lie in my being here as a speaker rather than as a listener. Having become of a fixed mind in the matter, however, there commenced a course of general investigation, close observing, and persistent inquiry. I found, whilst I knew infinitely little on some points that should be touched upon in an agricultural address, that I knew surprisingly much on others. I found that the opportunities of elaboration were so numerous that the difficulty would be what *not* to say, rather than what I should say. I found that there were such great schemes and problems, such vitally important questions and plans, all worthy of note and notice, that there came the doubt as to whether, in touching on this and slighting that, I might not be touching on what was thoroughly antagonistic and slighting what was vitally necessary. I found that, since last studying the matter, such radical changes in the mode of agriculture had taken place that the fashion of it had changed as does the fashion of a garment; that nature had not only been tickled and taken advantage of when in generous mood, but that she had been battled with and conquered when most obstinate and unpromising. I found two Titans in your service—Irrigation and Reclamation—and that with them you were bringing about the fulfillment of prophecy, for the desert places do rejoice, and the wilderness blossoms with the rose. I found that California is looking to her farms and farmers for solid prosperity, and that amidst the trouble, noise, and sorrow caused by the breaking of

stock brokers, the squeelching of rings, and the bursting of bubbles, there is growing up a firmer belief in, and truer appreciation of, the dignity of agriculture.

I can find no better text than this same one of the dignity of agriculture; and though it is quite possible I shall wonder off a little now and then, still I shall endeavor to keep strictly to the subject matter. You do not want me to tell you about cultivating beets or weeding turnips; about the latest improvements in headers or the easiest way to shell peas; about the depth at which to plant white beans or the kind of soil best fitted for alfalfa. Neither do you want the old, old story, of the watermelon vine running twenty miles over the country, or the equally valuable history of the pumpkin whose growth-power raised a barn fifteen inches. Rather it is my intention to present you with a broad, intelligent consideration of a great interest—to say something which it shall not be a waste of time for you to hear—which it shall not be a waste of time for me to speak; whilst if I can introduce a word of encouragement and hope, so much the better.

Some may think this last phrase *mal apropos* to so flourishing a community that the proffered encouragement and hope imply, if not distress, at least disconsolation. Let me explain myself before proceeding farther, and in doing so I shall use all possible delicacy. You know, then, that with very many otherwise sensible people there exists a feeling of this sort: 'They imagine that when a man goes into the country he sinks a little—remember these are not my words—that the heaviness of the clod clings to him; that because he gives his attention to cereals he will read no serial outside of the Turf, Field and Farm, or the Farmer's Friend; that becoming a good judge in hogs, he loses claim to being a good judge of paintings; that he can only take interest in a sunset as an indication of the next day's weather; that in fact, a man dulls to the extent of partially losing his identity. Sensible and honest though Civis may be, he has been guilty of a libel on his brother Rusticus. It—like the generality of libels—has an admixture of truth somewhere about it, but is in the main unfair and untruthful. The farmer of long ago was a stolid plodder, whose hands grew horny and gnarled as he dibbled in his potatoes and bound his wheat sheaves, whose back grew bent from swinging the scythe and looking down, who generally lagged behind in the way of news, and who was—to confess the truth—a trifle stupid and decidedly uninteresting.

But that is not the farmer of to-day. The man who now undertakes to make a living out of the cultivation of land must have the knowledge of a practised mechanic, for the use of machinery on farms is so universal that it is quite as necessary for him to know the value and place of cog, crank, bolt, and eccentric, as it was to know how to treat for the glanders. It is a proposition which, I think, you will not dispute, that the acquirement of such knowledge does not help make a man a dullard.

Elsewhere, the division and subdivision of land was formerly practised to the extent of making farms meagerly small, with every two or three acres fenced off into almost infinitesimal patches, whilst flocks and herds were numbered by the scores, or at most by the hundreds, they contained. Natural result—a contraction of ideas and expectations. Now, and here, however, you tillers of the soil are a little more expansive in your notions. It is a day's journey to

ride around the boundary fences of your estates; you have grain fields that would cover your grandfather's entire farm and those of his three neighbors; you run your furrows a mile long; you inclose half a mountain range for grazing purposes, and count your sheep and cattle by the thousands. Surely it will not be contended, in the face of these facts, that this gigantic style of work is going to "dull" a man.

Time was when the observance of the seasons was as rigid as a flag-post, and when experimenting with crops was regarded as trifling with Providence. Here in California a free and easy treatment of the months obtains. Sowing tide may be fixed by opportunity and not by the almanac, and if the barley looks unpromising and there is the chance of its not graining, the mowing-machine is sent into the field and you make *hay* whilst the sun shines. Nor does the be-spectacled and be-wigged law of custom bind you down and keep you back; because a certain style of tillage was deemed best, and a certain soil was supposed to be fitted only for raising a certain crop, used to be held (and is yet held in certain places) sufficient reason to restrain the farmer from stepping outside the customary road—but now, and here, you strike off at abrupt tangents, throw over the wooden figure of precedent, and set up the live leader of adaptability, kick down the scare-crow "What has been," and set up the potentate "What can be."

Time was, again, when a weekly jog to the nearest market town, or the occasional visit of the middleman, constituted the sole means available for the disposal of produce. It is not so now, and here. The railway flashes through the land, tapping every section of the country, or the rivers are dotted with wharves and landings, and intercourse with the markets is at once rapid and close. There is, in fact, progress everywhere, and progress never yet "dulled" a man.

As I am becoming, and intend to be throughout, slightly argumentative in this address, it will be perhaps wise to make the line of reasoning thoroughly distinct. To aid in this, bear for one minute with three words of recapitulation. I started in, then, Mr. President, to uphold the dignity of agriculture. As the best possible method of getting at the value of a proposition is that of discussion, and as discussion cannot exist without parties, I introduced on the contra side the townsman who spoke disparagingly of the countryman, and then tried to prove, by a rapid glance at the countryman's present style of life, that the townsman is wrong. If I have not succeeded, the fault lies in the poverty of my argument and not of my subject. I have a good case, ladies and gentlemen of the jury, and I want to win it.

But the actual weight of a man's opinion derogatory to the dignity of agriculture would be too trifling to merit notice were it not that its expression breeds a dangerous outgrowth. The labor market is affected. The body that should be so healthy and so willing to lay hands on the plow is sickly and shirks the job. The employment of white labor on your farms is difficult enough, the retaining of that labor is still more difficult, and you will, I know, bear me out in the statement that one of the curses of the workingman of to-day is the absurd and cowardly opinion he holds, that to be a farm-hand is to be something degraded, and is to occupy a mud-hole in the Slough of Despond!

I am not familiar with your opinions on the Chinese question, but

I *do* know that this sickly shirking offers the freest invitation to the Mongolian competitor. Your finikin white man cannot stand the burden and heat of the day levee building, and the Chinaman slides softly into the place and does stand it. Yet the finikin white man will hold a levee at a free lunch table, and levy tribute at the street corners on his working acquaintances. Remember, please, I am not so blind to facts as to include *all* white laborers under the idle head, but I am—as you are—sufficiently awake to the fact that specimens of the class are awfully numerous. It has been my constant cry to the lounging unemployed, “Go into the country and work!” The cry is caught up by superintendent, overseer, and rancher, and sent back, “Come into the country to work!” But the hard fact is that the ill-treated bummers shift their shoulders, change legs, but otherwise do not budge an inch. They are like the children in the market-place, who did not dance, though they were piped to never so wisely. Talk about strikes—strikers are not occasional in San Francisco, they are incessant; striking is not sporadic, it is an epidemic. Poor men who have not had a “meal’s vittels for a fortnight,” strike you for a dime about every other block. A millionaire said to me only a fortnight ago—a millionaire, by the by, who has not scrupled to work with his hands when he could find none for his head—said he, “The number of do-nothings is frightfully on the increase in San Francisco. I declare that not a day passes but I am applied to by half a dozen or half a score for relief—pecuniary relief. Men whom I thought to be well fixed, as well as professional spongers, ask for anything from twenty dollars to twenty-five cents. They are most persistent, too, and are evidently so hard-pressed that it is a question of actual existence with them.”

Here steps in the strong anti-coolie man, rabid with Chinaphobia, and cries, “Give the reason, give the cause of this shameful beggary. Tell your hearers, would it exist if fair encouragement were given to white labor, and the pig-tailed, rat-eyed, cat-footed heathen choked off? Tell them if the reason stands that way or no.”

Well, ladies and gentlemen, I don’t believe it does. I believe cause and effect are muddled by these strong anti-coolie people, and whilst I am conscious of the possibility of disaster arising from too great an influx of outside forces, I do not hold to averting that possible disaster by injustice. I put it to you, if there is any difference between the loafer who stones the working Chinaman and the rascal who tears down his neighbor’s fences to let in stray stock for fear they should come through the unmended gaps in his own. The result of honest inquiry amongst master-farmers and contractors leads to the belief that had they to depend solely upon white labor work would lag and stop. Whether it be harvesting or plowing, shearing or herding, fruit picking or making butter, the great difficulty seems to be in engaging men who will stay. If the work is a trifle hard, they get sick about lunch time, ask for fifty cents for physie, and are seen no more. Remember, again, I grant there are exceptions, but am I not right in the general phrasing of my rule?

These master-farmers and contractors say again, “We would rather employ white men than Chinese, because we believe white men do a better day’s work. It is the exception for us to refuse the white man employment, and it is the exception for him to remain with us over a week. The consequence is, interruptions and set-backs, whilst the Chinese work on quietly, though slowly, month in and month out.”

Again, there is a certain low grade of work which white laborers will not look at, and glancing over at your sister Counties of San Joaquin, Sacramento, and Yolo, I find that it is the impression there that had it not been for the Chinese the dykes would not have been built, and reclamation would still be in its damp, swaddling clothes!

The Chinese are objectionable in many particulars, of course; they don't go to church, and they don't support the schools; but, on the other hand, they don't hang around the bar-rooms playing *pedro*, and get drunk on tangle-brain and swipes. Now all this will, I am afraid, give you the idea that I am indulging in a panegyric on the Celestial; on the contrary, I would not grieve if there was not one in the State. But I am speaking thus plainly for three reasons. Reason the first is, that the prevailing tone of the city press is rather an ungenerous one. The writers dip their pens in gall, and slash away diatribes against that bugbear John Chinaman, and would have us believe he is the plague of the nation. They simply argue from one set of facts and ignore another set. You of Sonoma and Marin know that partiality for Chinese labor, to the exclusion of white labor, is not to be laid at your doors; and that the cause of so much idleness is not to be laid exclusively at the door of the Chinaman's tent. City knowledge and country knowledge are both good in their way, but they should be driven in pair and not singly. For instance, a clever editor learns that so many hundred Chinese are employed by you, and that so many hundred white men hang around the employment offices of San Francisco every day. He concludes that you are to blame for this, and forthwith calls you unpatriotic and grinding. Let this clever writer take a ride through the country and get at the reasons for Chinese employment, and his virulence will melt away as gently as a pound of butter in a hot sun.

Reason the second is, that you may rest satisfied that there are some who judge you as fairly as possible, and who appreciate the difficulty of your position.

Reason the third is, that at this public meeting, and through whatever aftermeans of publicity may be accorded these words, I embrace the opportunity of telling the white workingman plainly that he is largely responsible for the prevalence of Chinese labor, and that the sooner he is willing to buckle down to a little hard work; to toil in the fields rather than loaf in the streets; to begin as a field-hand rather than end as a receiver of alms; to be content with moderate and steady pay rather than worry for immoderate wages and drift into unsteady habits; to learn to look hopefully ahead instead of grumbling to have to rise at daybreak; so much the sooner will he get back into the place which he swears Ah Sin has usurped, but which has really been lost by abdication.

It is a favorite argument with those who turn up their noses at farm work—noses that are as a rule of the bibulous order—that it does not lead to anything better. A most mischievous mistake! It is almost invariably the initial point of a competency, if not of a fortune. But let me support assertion by facts. The Herald, of Aurora (Ill.), recently printed a list of well-to-do farmers who commenced life as farm laborers. The Herald says:

We present for the encouragement of young men the names of a number of farmers in this immediate vicinity who commenced working out at very low wages, and who have succeeded in making a living, besides laying up something for a rainy day. The names are well known

in this vicinity, and were gathered in half an hour's talk on the street, and could be multiplied many times by further search. We have purposely left out all those who have inherited any property from any source.

Then is given a list of successful farmers, from which I extract the few following cases:

Rodney McDole, of Sugar Grove, commenced work at farming at six dollars a month. Has raised a large family, and is now estimated to be worth sixty thousand dollars.

Fuller Bowdish, of Blackberry, commenced working at farming at eight dollars a month, is now about thirty-five years old, and worth twenty thousand dollars.

Ben George, of Sugar Grove, worked three years for one hundred and fifty dollars a year. At the expiration of the term he had saved three hundred dollars, and is now estimated to be worth seventy-five thousand dollars, at the age of fifty-one.

P. Young worked the first three years of his majority for ten dollars per month, and is now estimated worth from fifty thousand dollars to seventy-five thousand dollars. His brother Frank commenced in the same way, and is worth a like amount.

Daniel Myers, of Big Rock, worked one year at farming for ten dollars a month, saved one hundred dollars out of his wages, and started on his own hook. Is now fifty-three years old, and worth fifty thousand dollars.

David Annis, of Kaneville, father of our present City Judge, commenced his farming career in this country by working for Rodney McDole at haying for seventy-five cents a day. He strove for independence by getting McDole to trust him for a yoke of oxen, when he went to farming on his own hook. He has now over two thousand acres of land, and is estimated to be worth from one hundred and fifty thousand dollars to two hundred thousand dollars, at the age of sixty-four years.

William P. West, of our city, worked on a railroad until he had saved one thousand dollars, when he struck out West and went to farming, and is now worth from one hundred thousand dollars to one hundred and twenty-five thousand dollars.

James Eckles, of Bristol, came here twenty years ago without a cent, worked for farm wages, soon commenced on his own hook, and is now thought to be worth from fifty thousand dollars to seventy-five thousand dollars.

Now, to be sure, these are examples of success in life away over in Illinois; but, Mr. President, the principle holds good here in California; the principle holds good here in Sonoma and Marin Counties, and I will stake the reputation of this State for big vegetables that you could furnish me with fifty similar cases, verified by your personal experience.

Then the small amount of wages offered farm hands startles half the unemployed into inactive disgust. Twenty-five or thirty dollars a month for driving a team, twenty-five or thirty dollars a month for slogging away from "early morn to dewy eve" do not seem very much, it is true, but it must be remembered that this wages is outside of board and lodging. It is, indeed, so much money to be saved, or wasted, according to the character of the recipient. I know it needs patience, grit, and self-denial to cut loose from city associations, and pass through the hard noviciate of devotedness to Ceres and Pomona; but once the break is made, and the service has become familiar, there is a steady future of quiet content to be counted on. It is not a vague theory, an easily made but unsubstantial promise, that fortune lies in the furrow. With a few acres out of the millions that lie around a pushing man can with industry raise enough to support himself and family, and each year add to his producing capacity until he finally secures a sufficiency. Agriculture may be hard to woo, but she has this superiority over some of her sex—there is no danger of her going back on one as soon as she finds he is hand and heart her own. She does not refuse a man because he comes a-courting in coarse clothes, and does not shrink from the caress of a sun-browned hand. Only she requires constancy, and when that is assured, see how she favors her suitor; from an exacting mistress she changes placidly into a willing slave; her fellowship is helpfully

companionable; she brings health to those who embrace her, whilst I have only to look about me to see how justified I am in upholding her dignity—the dignity of agriculture!

Coöperation is needed. Let each take a hand in helping each along. Let husbands and fathers make it as easy as possible for their wives, and as pleasant as possible for their children. As soon as some little comfort can be allowed, don't play the niggard about getting it. As soon as the daily routine of house-work can be lightened, get help willingly. It has been up-hill climbing for sometime, now take advantage of every level piece and fair bank you come to.

Let the children do all they can to make it as easy and as pleasant as possible for the old people. Remember how they have striven to get the means of education and livelihood for you who are to come after. It will be but little recompense for struggling, and nipping, that you should do what lies in your power to smooth the way before them, so that the tired hands may rest, the feeble limbs be sustained, and the faded eyes may see that "at eventide there will be light."

And now, in conclusion, Mr. President, and ladies, and gentlemen, I am aware that in this address I have strayed far from the beaten track trodden in by those who step on the platform before an agricultural society. I have not charmed you with the full statistical reports last issued by the Assessors of Sonoma and Marin Counties, nor shall I leave you happy in the possession of choice information respecting the number of bushels harvested on the wheat fields of Connecticut. I have not assayed an essay on irrigation, nor have I endeavored to solve the Chinese problem. I have somehow forgotten to instruct you on reclamation, and have not congratulated you on your crops. Instead of adopting this regular and sensible course, I have taken a text and preached you a sort of lay sermon. If I have been a trifle serious at times, it is because I felt seriously, and though I have not invoked the American eagle nor cried eureka, the character of my subject would excuse a little tall talk.

I take it that the dignity of agriculture is quite as noble a theme as the election of a Supervisor, and I have heard some burning oratory spring into existence during the struggle between Mr. Green and Mr. Jones for the Supervisorship of the First Ward. I question, indeed, if I shall indulge in anything approaching a peroration full of sound and climax. No, I would rather say something which shall be full of cheer and reasonably worth remembering. You are living lives that are not empty ones; cultivating waste lands and making the untouched earth fruitful is noble work. You are the thews and sinews of a nation's existence. You are living lives that place you on an equal standing with those who form the other pillars of the country's importance—commerce and manufacture. With a thriving agricultural community there is no fear of America's decadence. You are living lives that have in them the charms of quietness and peace. No turmoil of fevered stock-gambling hurts your ears, no chicanery in business warps your faith in your fellow-men. The years flow tranquilly along, marked only by the gently changing visits of the seasons. God's sun shines down on you more than half the year, and feeling his beneficent influence, there is no need for you to turn elsewhere for unstable doctrines preached by wrangling, narrow sects. Seed time and harvest, summer and winter, are too pregnant with teachings to suffer any ignoring the great creative power.

You are living lives that are dignified. You can look about on broad acres and feel your face glow with the pride of possession. You can remember what barrenness once existed where these fertile fields now lie, and know that to your industry and perseverance the change is due, and whilst you can point out this and that great improvement and say boldly, yet reverentially, "I did it,"—what further need is there for me to dwell on the dignity of agriculture.

And now there is another point I want to touch briefly upon—a point which presents quite as grave aspects as does that involved in the labor question. I see I am speaking to two generations, and it is from the younger that I would ask a little attention. It seems an instinct of nature that young birds should leave the parent nest; but all instincts cannot be classed as eminently desirable. This one needs modification. If the old home is so overcrowded that there is no room to grow; so mismanaged that there is no chance of setting it right; or so uncomfortable that any change would be for the better, then striking out for themselves is the best and only course of action for the children.

Immigration, like death and marriage, makes great changes amongst us, and is mighty in its effects on the smooth working of the world's machinery. Action and movement are necessary, or we shall have rust and mildew. But regular action is needed, too, or we shall have confusion and jumble; and of the two I question whether it would not be better to let an engine rust rather than turn it adrift to run amuck on a crowded line, and to let a pool lie under a green mantle rather than have its waters caught up in the wild arms of a destructive whirlwind.

Now, the pith of the whole matter is this: Boys, don't be in a hurry to leave your fathers' homesteads.

The reasons that actuated your parents in moving away from home cannot be applied to you. It was their duty to found a new country; it is yours to build it up. They have set up roofs for you; now set up others of the same pattern, or, if you like, improve on the original to the best of your ability, always being sure that your ability is ahead of your fathers'. The old people have made a fortune on the ground where you were brought up or born; try to show you value the honest getting of that fortune by following in their footsteps; that is, follow them as closely as needs be at first, and then stride on with seven-league boots, only keeping the same direction.

The direction I advise you against is that of drifting townwards. Steer clear of the quicksands and shoals of city life; be content to look at the stretch of blue sky that lies over the open fields, rather than craning your neck to get a glimpse of it between two rows of houses. It is hard to say that the ambition to become a lawyer or a doctor is not a laudable one, and God forbid that I should advocate the total repression of such aims. Just as I spoke of certain instincts needing modification, however, so I believe certain aims need it. Study the law of supply and demand. Take a look at the hosts of struggling doctors without practice, and lawyers without fees, that swell the city's census returns, and don't be over-confident that you have better chances of success than they. I can tell you, young men, that with half the City of San Francisco sick, and the other half engaged in litigation, the legal lights and medicos of the city would not find their hands full. How in this world of pleading and pills they ever manage to get along as it is passes me. You will not be

filling a gap, then, by increasing the ranks of these struggling members of two honorable professions, and you will have to be as sharp and smooth as a needle to wedge your way into a firm place.

"There are the avenues of trade," you will say; "surely, they are available." Certainly they are, and in no place are they more available than exactly where you live. As a matter of course, every farmer is interested in the markets, and the chances of a good or bad trade year. What better business can there be than that of the agriculturist? It strikes me that it is just as honorable and just as responsible to be a producer as it is to be a buyer of wheat; to be a wine maker as a wine merchant; to be a fruit grower as a fruit dealer; to keep a dairy ranch as to be a butter-man. You have energy and tact. Well, so much the better; they are qualities that do not waste their sweetnees on the rancho's air. No farmer has ever been ruined because he happened to be a cute hand at a bargain, whilst, as to the respectability of the two positions, do you not know that glad as you are to be welcome and entertain the city merchant who visits you, he is no less anxious to show his esteem of the supplier. I tell you, boys, we city folk have a habit of looking on you young farmers as the solid men of the State. Let me tell you, too, the difference between making a fortune in the counting-house and one in the field. The first is won at greater wear and tear of the brain and body, and goes the more quickly.

Fortune lies in the furrow, and having put your hand to the plow, do not turn back and look longingly at the city's smoke, or the chances are that you will, like those who toil there, come to grief on your shares.

Fortune lies in the furrow; only here the furrows lie on our common mother's face, whilst back there they are deeply marked on the face of the tired money-getter.

Fortune lies in the furrow. Aye, and health lies there, too. With the great blessing of independence, and that greater one of a sound body, what can you wish for more? Ask the anxious, prematurely aged millionaire which he values most, his present bank account, or his past good digestion?

Fortune lies in the furrow, and though there may be an occasional bad season, bankrupt farmers are as rare as the four-leaved clover.

I know there is the probability of this advice being taken in much the same spirit that the stage-struck youth takes the advice of the honest manager who tries to dissuade him from making his "first appearance on any stage." At any rate, the advice is well meant, and it is not with good advice that a certain place is paved.

Understand me well, please. I would not have you imagine that I am in favor of belittling your sphere of labor; to the contrary, I should be, if I drew flattering pictures of city life, and so induced you to become a unit in a struggling crowd. The country is great and free, and there is room in it for you to reach out and stretch to your heart's content. Besides, there is the chance of your doing so much better. Instead of making one of a town, you can make a town. How often has it happened in this new country of ours that a farm-place is found to be a good central point of an agricultural district, warehouses are built, it becomes the polling place of a precinct, the railway flings down a branch line to tow it along, incorporation takes place, and Farmer Coulter is made Mayor of Coulterville.

Still less would I be open to the charge of advocating a lower grade of education for the country lads. Get all the schooling you can; it will not be thrown away because you prefer to be what your fathers were. Knowledge is as much power in the country as in town. You have such opportunities as your parents never dreamed of possessing. You can study agricultural chemistry in a College of Agriculture, and then as a farmer put to practical use the information gained as a collegian. The age when "new-fangled notions" were looked upon with suspicion is dead and buried, and in its place has arisen one of clear-headed belief in every branch of advancement.

There is in each family, I believe, a somebody who is known as the genius. He is a touch above the other members, has aspirations, bears about with him the promise of doing all sorts of things, is full of hope and airs, writes poetry for the newspapers, is scrupulous about his hands, and is looked upon as certain to make his mark. If any of your parents are blessed with a genius, by all means let him follow his bent, let him have his fling. I have known one or two Georges the Geniuses who were glad to come back and follow the example of Peter the Plodder.

All this is spoken in the kindest spirit, and with the best intention—the spirit of one who takes a deep interest in those who are growing up to fill the places of those who are going down hill—and the intention of earnestly assuring you that you will be acting a good part by doing all you can towards sustaining the dignity of agriculture. One reason alone, and the last, should be all potential: it is, that in electing to gain a living as your parents do or did, you honor them whilst with you, and show a spirit of reverence for their memory.

Notwithstanding my Republican faith, I am next about to transgress one of its first tenets and invade the sancity of your homes. I purpose paying a domiciliary visit, and yet, squarely opposed to your opinions as such a proceeding must be, I am in the hope that you will excuse the intrusion, and extend an invitation to the intruder. The exercise of faith, and a consequent effort to get up and walk, have perhaps as much to do with the healing of a patient as the application of a magic ointment, and so I might uphold the comfort and dignity of country life with every art of argument and persuasion at my command, with but one tithe the effect caused by faith in its dignity and comfort on your part, and a consequent effort to promote the one and uphold the other. I have spoken to the laborer, to the sons, and now I have a word or two for those who have the management of home in their hands. Excuse me if I question whether there is enough attention paid to the comfort of country homes. I don't mean that there is any actual neglect of the actual means of living substantially, but I am led to doubt if the many nameless aids to making home elegant, aids that cost little and are worth much, whether they are not overlooked. Don't let the walls be bare, keep a cosy parlor, have a few bright flowers around the house, let your children learn music, keep up with the spirit of the times, look out for the new novels (they're cheap enough now), encourage habits of neatness in dress, make some change of costume for dinner and evening—these are a few of the aids I mean. They exist of course in hundreds of farmers' houses, but there are hundreds where they do not. I know places where you can study a favorite breed of hogs from the front door-step, where there is no parlor, where labor is made paramount, where the children are

suffered to grow like Topsy, and where the only garden is for vegetables. To those who have nice homes and home-like surroundings I would say, keep them so or you will fail in a duty; to those who neglect these matters I would seriously say, you have failed in a duty. There is no reason in the world why the farm-house should not be as comfortable and pretty as the town-house. Don't let the stock-yard entrench on the porch—don't have the field the only topic of conversation. The city merchant leaves his business behind him when he leaves the office, and devotes his evening to social intercourse; why shouldn't the farmer do so too? It won't make him any the poorer to "wash up" when the work is done, and put on an easy coat, and listen to his daughter playing, whilst the good wife passes an hour with her needle, and the boy takes up the last number of Harper's. It doesn't follow that they have not been attending to their several duties during the day, house-keeping, cleaning, harvesting, or what not; and it is not an impossible sketch I have drawn, but the reproduction of what is happily becoming everywhere more common. Eastern people, when they first come here, have nearly always something to say about the model homesteads that dot Maine and Vermont, with an open comparison between those and ours that does not reflect to the overwhelming advantage of this State. They are, perhaps, given to tingeing it a little strong; but they are not entirely without excuse for the tenor of their remarks. On the other hand, you have the excuse—if it is needed—that, in a new country, to get a house is the first consideration; to deck and garnish it an after-thought. There is something in that, and we will look confidently forward to a time when rural elegance shall prevail and everything be as neat as wax. There is always a great amount of labor involved in starting too; and work, hard work, continual hard work, is not supremely calculated to induce habits of refinement. There is no heart for anything better; or, worse still, there is no time for it. You men, or rather let me say, we men, are prone to think the heaviest part of the yoke lies on our shoulders. Bread-winning is difficult all around, and the helpmeet has her share of collar-work. I look to you, ladies, for the indorsement of these lines on

THE FARMER'S WIFE.

Up with the birds in the early morning—
 The dew-drop glows like a precious gem;
 Beautiful tints in the skies are dawning,
 But she's never a moment to look at them.
 The men are wanting their breakfast early;
 She must not linger, she must not wait;
 For words that are sharp and looks that are surly,
 Are what men give when meals are late.

To glorious color the clouds are turning,
 If she would but look over hills and trees;
 But here are the dishes, and here is the churning—
 Those things always must yield to these.
 The world is filled with the wine of beauty,
 If she could but pause and drink it in;
 But pleasure, she says, must wait for duty—
 Neglected work is committed sin.

The day grows hot and her hands grow weary;
 Oh, for an hour to cool her head,
 Out with the birds and the winds so cheery!
 But she must get dinner and bake the bread.

The busy men in the hay-field working,
 If they saw her sitting with idle hand,
 Would think her lazy, and call it shirking,
 And she never could make them understand.

They do not know that the heart within her
 Hungers for beauty and things sublime;
 They only know that they want their dinner—
 Plenty of it—and just "on time."
 And after the sweeping and churning and baking,
 And dinner dishes are all put by,
 She sits and sews, though her head is aching,
 Till time for supper and "chores" draws nigh.

Her boys at school must look like others,
 She says, as she patches their frocks and hose;
 For the world is quick to censure mothers,
 For the least neglect of children's clothes.
 Her husband comes from the field of labor;
 He gives no praise to the weary wife;
 She's done no more than has her neighbor;
 'Tis the lot of all in country life.

But after the strife and weary tussle
 With life is done, and she lies at rest,
 The nation's brain and heart and muscle—
 Her sons and daughters—shall call her blest:
 And I think the sweetest joy of heaven,
 The rarest bliss of eternal life,
 And the fairest crown of all will be given
 Unto the way-worn farmer's wife.

ANNUAL MEETING.

The State Agricultural Society held its annual meeting at the pavilion, Sacramento, on Wednesday, January twenty-third, eighteen hundred and seventy-eight. A lively interest was manifested, and the attendance was large. At noon, both Houses of the Legislature adjourned to enable the members who desired to attend the meeting.

President Major Marion Biggs called the meeting to order at three o'clock p. m., and submitted the annual report of the Directors, which was read (by request) by M. D. Boruck, Esq., of San Francisco.

The Secretary's financial report, embracing the entire financial transactions for the year, was then submitted.

On motion, the reading of the report was omitted, and it was ordered referred to a committee, consisting of W. R. Cantwell, E. Greer, and T. M. Lindley, with instructions to examine it and report to the Directors.

ELECTION.

Major Biggs announced that nominations for President were in order.

Hon. Creed Haymond, of Sacramento, referred to the past services of Marcus D. Boruck as a Director, and nominated him for President of the Society.

On motion, nominations were closed, and the Secretary instructed to cast the vote of the Society for Mr. Boruck.

Mr. L. A. Upson, Secretary of the meeting, then cast the vote, and Mr. Boruck was declared elected amidst applause.

On motion, the thanks of the Society were voted to Major Marion Biggs, the retiring President, for the services rendered the Society by him during his term of office.

Mr. Boruck then announced that the terms of Messrs. Johnson, Hamilton, and Green had expired as Directors, and the election of their successors was next in order.

Colonel Younger nominated Chris. Green, of Sacramento.

Mr. Johnson nominated Daniel Flint, of Sacramento.

Mr. Colby nominated Albert Gallatin, of Sacramento.

J. J. Green nominated L. J. Rose, of Los Angeles.

J. O. Goodwin nominated George Gridley, of Butte County.

D. W. Welty nominated G. W. Colby, of Butte County.

On motion, nominations closed, and Messrs. Biggs, Carey, and Chase were appointed tellers.

Whole number of votes cast, three hundred and seventy. Necessary to a choice, one hundred and eighty-six. Of which Mr. Gallatin received two hundred and thirty-seven votes; Mr. Flint received two hundred and twenty-six votes; Mr. Colby received two hundred and six votes; Mr. Rose received one hundred and fifty-four votes; Mr. Gridley received one hundred and eighteen votes; Mr. Green received one hundred and ten votes.

Messrs. Gallatin, Flint, and Colby, having received a majority of all the votes cast, were declared elected Directors of the Society for the term of three years.

On motion, L. J. Rose, of Los Angeles, was elected by acclamation a Director for the term of one year, to fill the vacancy caused by the election of M. D. Boruck to the Presidency.

On motion, the Society then adjourned.

RAINFALL FOR 1877 AND 1878.

BY SAMUEL H. GERRISH, SACRAMENTO.

September, 1877—Not a drop of rain.

October, 1877—12th, sprinkle; 21st, 0.120; 22d, 0.540; 24th, sprinkle; 25th, 0.030. Total for month, 0.690 of an inch.

November, 1877—2d, 0.075; 3d, 0.010; 4th, 0.020; 5th, 0.065; 6th, 0.010; 11th, 0.810; 14th, 0.040; 16th, 0.010; 22d, sprinkled; 23d, 0.080. Total for month, 1.120 inches.

December, 1877—12th, 0.007; 17th, 0.516; 19th, 0.004; 21st, 0.224; 22d, 0.007; 23d, 0.453; 24th, 0.021; 25th, 0.002. Total for month, 1.234 inches.

January, 1878—6th, sprinkle; 7th, 0.191; 8th, 0.044; 9th, 0.289; 10th, 0.007; 14th, 0.063; 15th, 1.362; 16th, 0.966; 18th, 0.169; 19th, 0.003; 21st, 0.106; 22d, 1.216; 23d, 0.017; 24th, 0.999; 25th, 0.012; 26th, 0.105; 27th, 0.886; 28th, 0.193; 30th, 0.767; 31st, 0.440. Total for month, 7.912 inches.

February, 1878—1st, 0.007; 4th, 0.802; 6th, 0.463; 7th, 0.136; 8th, 0.140; 10th, sprinkle; 11th, 0.765; 12th, 0.075; 13th, 0.473; 14th, 0.705; 15th, 0.007; 16th, 0.022; 17th, 0.907; 18th, 0.925; 20th, 0.549; 23d, 0.149; 24th, 0.076; 26th, 0.651; 27th, 0.266. Total for month, 7.118 inches.

March, 1878—3d, 0.449; 4th, 0.005; 6th, 0.482; 7th, 0.020; 12th, sprinkle; 13th, 0.445; 14th, 0.076; 17th, 0.004; 18th, 0.007; 21st, 0.033; 24th, 0.507; 25th, 0.156; 26th, 0.208; 27th, 0.563; 28th, 0.104; 29th, 0.058; 30th, 0.029. Total for month, 3.166 inches.

April, 1878—14th, 0.098; 15th, 0.618; 16th, 0.005; 19th, 0.357; 21st, 0.004. Total for month, 1.082 inches.

May, 1878—18th, sprinkle; 20th, 0.152; 21st, 0.115; 31st, 0.023. Total for month, 0.290 inches.

June, 1878—None to 13th.

RAINFALLS BEFORE AND AFTER JANUARY FIRST.

We are indebted to Professor G. F. Becker, of the Department of Mining and Metallurgy at the State University, for the interesting diagram on this page, showing the relation between the amount of

rain falling before and after January first, in each year since eighteen hundred and forty-nine. The method which prevails in the plotting is described in a note from Professor Becker, which we print below. It will be noticed that heretofore an average of two-fifths of the rain of the fiscal year has fallen before January first. While this would give us a rather light total rainfall this year, if it conformed to the average, it is also shown in the diagram that wide departures from this rule have occurred in single cases heretofore, and we trust may occur this year. The study of our rainfall is a practical one, and we are under obligations to all scientific observers who give us data for pursuing it. Professor Becker's note in relation to the diagram is as follows:

MESSRS. EDITORS: To what extent the rainfall before the first day of January is proportional to that of the whole season, is a frequent subject of discussion and is a matter of great practical importance to the State. When Mr. Tennent published his valuable figures on the subject, in the Bulletin of a few nights since, it occurred to me that it would be interesting to give this relation of the partial rainfall to the total in a graphic form, and in such a manner that the general proportionality, if it existed, and the relations for each year, would be apparent at a glance.

I make the following division of the rainfall in each year:

RAINFALL IN SAN FRANCISCO.*

YEAR.	Before Jan- uary 1st	After Jan- uary 1st	Total
1849-50	18.00	15.10	33.10
1850-51	2.30	5.10	7.40
1851-52	10.46	7.98	18.44
1852-53	19.31	15.95	35.26
1853-54	5.22	18.65	23.87
1854-55	3.72	19.96	23.68
1855-56	6.03	15.63	21.66
1856-57	7.08	12.73	19.81
1857-58	8.13	13.75	21.88
1858-59	9.78	12.44	22.22
1859-60	8.95	22.27	31.22
1860-61	7.86	11.86	19.72
1861-62	13.66	35.61	49.27
1862-63	2.90	10.72	13.62
1863-64	4.38	5.70	10.08
1864-65	15.94	8.79	24.73
1865-66	5.27	17.66	22.93
1866-67	18.62	16.30	34.92
1867-68	16.34	22.50	38.84
1868-69	5.67	15.68	21.35
1869-70	6.91	12.40	19.31
1870-71	3.80	10.30	14.10
1871-72	20.60	14.11	34.71
1872-73	10.22	7.80	18.02
1873-74	12.21	11.77	23.98
1874-75	9.01	9.39	18.40
1875-76	10.03	15.98	26.01
1876-77	3.21	6.79	10.00
Grand total	265.61	392.92	658.53
Ratio	2	to 3	to 5

*According to Tennent.

Regent Davidson, nearly five years since, plotted Mr. Tennent's figures for the purpose of discussing the periodicity of the rainfall, but not in such a manner as to bring this special relation into prominence. In the accompanying diagrams each perpendicular line represents a

winter from the year eighteen hundred and forty-nine on. The horizontal lines represent inches of rain, and the distance from the base or zero line at which each curve crosses the vertical line appropriate to any year, indicates the amount of rain which fell in San Francisco during that year. The three diagrams represent respectively the rainfall before the first of January, after the first of January, and the total rainfall. The scale of years is continuous, and is the same for all the curves; the scale representing inches, on the other hand, is different for each, and is inversely proportional to the amount of rain which has fallen during the period covered by the diagram. The consequence of this selection of scales will evidently be that if the amount of rain falling before the first of January were simply proportional to the total rainfall for the season, and if, in each year, just two-fifths of the rain came before January first, the three curves would be identical. Hence, their variation expresses exactly the limits within which this rule applies.

As your readers are interested in the weather, perhaps some of them may find this chart a convenient record of the past.

G. F. BECKER.

UNIVERSITY OF CALIFORNIA, December 20th, 1877.

WOOL REPORT OF E. GRISAR & CO.

FOR THE YEAR 1877.

WOOL PRODUCTION.

January	540 bags.
February	338 bags.
March	8,948 bags.
April	34,386 bags.
May	30,523 bags.
June	11,924 bags.
July	3,777 bags.
August	6,674 bags.
September	14,381 bags.
October	26,679 bags.
November	14,408 bags.
December	3,182 bags.
Total	155,760 bags.
Of which there was spring wool, 90,895 bags, weighing	27,068,500 pounds.
Spring wool shipped direct from the interior	2,291,940 pounds.
Total spring production	29,360,440 pounds.
There was fall wool received, 62,865 bags, weighing	20,431,125 pounds.
Fall wool shipped direct from the interior	569,177 pounds.
Total fleece of wool	50,360,742 pounds.
Pulled wool shipped direct from San Francisco	2,750,000 pounds.
Total production of California	53,110,740 pounds.
On hand December 31st, 1877, about	3,500,000 pounds.
Received from Oregon, 16,417 bags	4,929,675 pounds.
Foreign wool received, 2,047 bales	685,100 pounds.
Grand total	62,225,515 pounds.

EXPORTS.

Domestic, foreign, pulled, and scoured :	
Per rail, inclusive of shipments from the interior	44,961,919 pounds.
Per steamer, inclusive of shipments from the coast	395,154 pounds.
Per sail	7,509,216 pounds.
Total shipments	52,866,289 pounds.
Value of exports	\$9,500,000.
On hand December 31st, 1877	1,500,000 pounds.

Difference between receipts and exports has been taken by local mills.

The weights of receipts and exports are gross. The usual tare of bags received is about three pounds each; on pressed bales, shipped, fourteen to sixteen pounds each.

The difference between receipts and exports is larger than formerly, on account of the opening of several new scouring companies, which has increased the shipment of scoured wool.

During the past year the wool growing interest of California has received a very decided check, owing to the paucity of rain falling during eighteen hundred and seventy-six-eighteen hundred and seventy-seven, and the consequent failure of the grass crop, especially

throughout the middle and southern portions of the State. The mortality amongst the sheep began during the winter, and rapidly increased as the season advanced, compelling many owners to drive their flocks into the mountains, where, and during their transit to and from, large numbers were lost; others found temporary ranges in the northern parts of the State, and in Nevada, also in Arizona and New Mexico, from whence a portion may in all probability return, should the coming season prove to be favorable. These disasters have greatly diminished the wool growing capacity of the State, from which it must take some time fully to recover. The loss, however, has to some extent been counterbalanced by a large increase in the northern counties.

The receipts of spring clip show that the natural increase has been lost, and the diminished production of fall wool furnishes evidence of the great mortality amongst both sheep and lambs.

Shearing during the fall has been general, and there will probably be less long stapled wools than usual in the coming clip. The drought will have the effect of improving the quality of the wool hereafter, as naturally the poorest sheep have died, and owners in reducing their flocks have, of course, retained the best. It has also served to call attention to the advantages of green feed, as an exceptionally large number of sheep have been fed on tule lands and artificial grasses, such as alfalfa, etc., and in many cases the fall wool from those sheep has been superior, being quite free from dust, and very similar to spring wools in appearance and working properties. Of the coming clip it is too early to form any estimate, but the amount must be considerably less than last year.

The wool product of eighteen hundred and seventy-seven has been inferior to that of the preceding year, more of the wools being dusty, and the long stapled spring clips were generally in poorer condition. The unusually large proportion of short stapled, dusty wools, resembling those of the fall clip, coming on the market, may be accounted for by the scarcity of food and consequent suffering of sheep.

Fall wools, also, were generally inferior, although better than was anticipated. The falling off in the receipts from the south was very marked. The spring and fall clips of the extreme northern counties were, however, above the average, both in condition and staple.

The market has been good. Spring wools were moved readily, and until late in the season without any excitement or marked fluctuation in prices. During July the market here sympathized in the activity prevailing in other wool growing States, and prices reached a point which subsequent events have shown to be unwarranted. When fall wools began to arrive stocks were very light. Receipts were at first small, but as they increased stocks unsold became larger. As prices were lower than growers anticipated they were at first inclined to hold. At the beginning of November stocks were large, but since that time the demand has been good, and the warehouses here contain less than the amount usual at this time.

Prices during the spring were much higher than those ruling in eighteen hundred and seventy-six. Average stapled free wools opened at seventeen cents to nineteen cents, and maintained these rates during the season for good lots, and fourteen cents to fifteen cents for dusty and unsightly parcels. Southern wools ranged from fifteen cents to nineteen cents, according to staple condition and freedom from bur. Northern wools brought from twenty-six cents

to thirty-two cents, the latter price being paid for good stapled light conditioned and slightly free wools.

Rates for fall wool have been generally about the same as those ruling in eighteen hundred and seventy-six. The lower premium on gold, and latterly the reduction of freight, have rendered possible their being landed in Eastern markets at lower cost than a year since.

The receipts of Oregon wool have increased. The Eastern wools were better than heretofore, as they contained less alkali and were of finer quality. Prices ranged from twenty-six cents to twenty-nine cents. Valley wools were of the usual character—from twenty-eight cents to thirty-three cents was paid. A large amount was shipped to the East for owners account, because buyers could not be found here to take the wool at cost. On account of the wide variation in character and consequent difference in values of free wools grown in the State, we omit the tabular quotations heretofore given. Free wool from one part of the State has been sold at fifteen cents to seventeen cents, while the production of other sections has realized at the same time thirty cents to thirty-one cents.

PRODUCTION OF CALIFORNIA WOOL.—TAKEN FROM THE BOOKS OF E. GRISAR & COMPANY, FROM EIGHTEEN HUNDRED AND FIFTY-FOUR TO EIGHTEEN HUNDRED AND SEVENTY-SEVEN, INCLUSIVE.

THE CHEMICAL COMPOSITION OF CALIFORNIAN WINES.

BY W. IVISON MACADAM, LECTURER ON CHEMISTRY, EDINBURGH.

Until lately the principal part of the wines obtainable were those grown on the continent of Europe. Within the last few years, however, several new countries have forwarded small consignments to the British market.

For the proper growth of the wine vine, it is necessary that the climate should not be liable to rapid changes of temperature, for although a hard frost in the winter, when the sap is not ascending, does no damage but rather good to the plant, yet during the spring months the vine must not be exposed to sudden frosts, else the tender fruit branches will be liable to be frosted and their proper growth damaged or permanently destroyed. It is also necessary that the vines should not be exposed to heavy rains during the autumn months, as these deteriorate the fruit crop.

On the continent of America the State of California is particularly adapted to the growth of the vine, for although the temperature is somewhat low during winter, yet the spring, summer, and autumn months may be depended on. For the last few years much attention has been devoted in the State to the growth of the better class of wine vine, and great improvement has been made in the vineyards by the introduction from Europe of plants and graftings of the Riesling, Malvoisie, Zinfandel, Orleans, Berger, and other high class varieties. The wines manufactured are large in number and include white and red varieties, ports, champagne, etc.

Samples of port, malaga, sherry, and a special variety called "Mount Vineyard," were obtained direct from the American vineyards, and submitted to analysis, when they gave the following results:

PORT.

Specific gravity of wine.....	1022.96
Specific gravity of wine, <i>minus</i> alcohol.....	1035.03
Specific gravity of distillate.....	977.01
Percentage of alcohol <i>by weight</i>	15.99
Percentage of alcohol <i>by volume</i>	19.00

In One Imperial Gallon.

Total dry residue.....	8439.90 grains.
Total dry residue, <i>minus</i> ash.....	8194.90 grains.
Total ash.....	245.00 grains.
Grape sugar.....	5833.00 grains.
<i>Fixed</i> acid, calculated as tartaric acid.....	249.90 grains.
<i>Volatile</i> acid, calculated as acetic acid.....	42.00 grains.

In One Hundred Parts.

Dry residue.....	11.786 grains.
Dry residue, <i>minus</i> ash.....	11.444 grains.
Ash.....	0.342 grains.
Grape sugar.....	8.146 grains.
<i>Fixed</i> acid, calculated as tartaric acid.....	0.357 grains.
<i>Volatile</i> acid, calculated as acetic acid.....	0.060 grains.

Taste, sweet.

Color, rich.

The specific gravity of this wine is higher than is usual in the case of Portuguese ports. This is due to the large amount of grape sugar, which also greatly increases the dry residue, which is fully two per cent. above the average amount to be obtained in "natural" ports.

MALAGA.

Specific gravity of wine.....	1053.56
Specific gravity of wine, <i>minus</i> ash.....	1073.27
Specific gravity of distillate.....	978.66
Percentage of alcohol <i>by weight</i>	14.25
Percentage of alcohol <i>by volume</i>	17.33

In One Imperial Gallon.

Total dry residue.....	14249.90 grains.
Total dry residue, <i>minus</i> ash.....	13974.10 grains.
Total ash.....	275.80 grains.
Grape sugar.....	10769.23 grains.
<i>Fixed</i> acid, calculated as tartaric acid.....	254.80 grains.
<i>Volatile</i> acid, calculated as acetic acid.....	47.60 grains.

In One Hundred Parts.

Dry residue.....	19.321 grains.
Dry residue, <i>minus</i> ash.....	18.948 grains.
Ash.....	0.373 grains.
Grape sugar.....	14.602 grains.
<i>Fixed</i> acid, calculated as tartaric acid.....	0.364 grains.
<i>Volatile</i> acid, calculated as acetic acid.....	0.068 grains.
<i>Taste</i> , sweet.	
<i>Color</i> , good.	

The amount of grape sugar is very large, which increases the weight of the dry residue and specific gravity of the wine.

SHERRY.

Specific gravity of wine.....	993.22
Specific gravity of wine, <i>minus</i> alcohol.....	1114.86
Specific gravity of distillate.....	978.83
Percentage of alcohol <i>by weight</i>	14.60
Percentage of alcohol <i>by volume</i>	17.70

In One Imperial Gallon.

Total dry residue.....	2701.30 grains.
Total dry residue, <i>minus</i> ash.....	2536.80 grains.
Total ash.....	164.50 grains.
Grape sugar.....	1129.03 grains.
<i>Fixed</i> acid, calculated as tartaric acid.....	292.85 grains.
<i>Volatile</i> acid, calculated as acetic acid.....	26.60 grains.

In One Hundred Parts.

Dry residue.....	3.884 grains.
Dry residue, <i>minus</i> ash.....	3.648 grains.
Ash.....	0.236 grains.
Grape sugar.....	1.623 grains.
<i>Fixed</i> acid, calculated as tartaric acid.....	0.381 grains.
<i>Volatile</i> acid, calculated as acetic acid.....	0.038 grains.
<i>Taste</i> , dry.	
<i>Color</i> , pale.	

This analysis agrees closely with Spanish "natural" sherries.

"MOUNT VINEYARD."

Specific gravity of wine.....	1016.29
Specific gravity of wine, <i>minus</i> alcohol.....	1035.89
Specific gravity of distillate.....	978.98
Percentage of alcohol <i>by weight</i>	14.00
Percentage of alcohol <i>by volume</i>	17.00

In One Imperial Gallon.

Total dry residue.....	6679.40 grains.
Total dry residue, <i>minus</i> ash.....	6517.00 grains.
Total ash.....	162.40 grains.
Grape sugar.....	5185.18 grains.
<i>Fixed</i> acid, calculated as tartaric acid.....	235.20 grains.
<i>Volatile</i> acid, calculated as acetic acid.....	32.20 grains.

In One Hundred Parts.

Dry residue.....	9.389 grains.
Dry residue, <i>minus</i> ash.....	9.161 grains.
Ash.....	0.228 grains.
Grape sugar.....	7.288 grains.
<i>Fixed</i> acid, calculated as tartaric acid.....	0.336 grains.
<i>Volatile</i> acid, calculated as acetic acid.....	0.046 grains.
<i>Taste</i> , sweet.	
<i>Color</i> , pale.	

A large amount of grape sugar present.

These results show that the percentage of alcohol in all of the wines closely resembles the amount generally found in "natural" European varieties, and that the acid, both *fixed* and *volatile*, is below the average; that the high specific gravities of the port, malaga, and Mount Vineyard are due to the presence of considerable quantities of grape sugar, which has doubtless been added to the wine so as to suit the taste of consumers. From the same cause the dry residues obtained from those three wines is considerable. In the sherry the whole of the results point to a wine very closely allied to the Spanish varieties of "natural" sherry. The ash in all the wines is small in amount.

In taste the sherry resembles the dry class of wines, whilst the port, malaga, and Mount Vineyard are sweet to taste. The port has a rich color, whilst the sherry and Mount Vineyard are pale and bright. On account of the wines being somewhat new, they lack in a degree the bouquet of older wines, but doubtless when aged the others will be formed in larger quantities and supply what is at present wanting. They are good sound wines, and somewhat agreeable to taste.

The home consumption of these wines in the State of California is considerably above two million five hundred thousand gallons per year. The export in eighteen hundred and seventy-three was four hundred and ninety thousand five hundred and sixty-eight gallons, whilst for the first six months of eighteen hundred and seventy-seven the total amount sent out of the State was four hundred and fifty-two thousand three hundred and ninety-two gallons, thus showing a considerable increase. The most of the exported material is used on the American continent, whilst smaller amounts find their way to more distant markets. In eighteen hundred and seventy-six Great Britain received one thousand and thirty-three and a half gallons, being the first consignment, whilst Germany obtained one thousand five hundred and twenty-five gallons.

JUTE AND JUTE CULTURE.

We commend the following to the serious consideration of the cultivators of the soil in this State, believing that the climate of California and a large portion of her soil is especially calculated, and far superior to that of any other State in the American Union, for the culture and production of this important and valuable article:

THE NEW INDUSTRY OF THE SOUTH.

The subject of jute culture was brought before the meeting of the Farmers' Club, Tuesday afternoon, by a communication from Professor Waterhouse, of Washington University, St. Louis, who believes that if jute can be naturalized in the United States it is a fact of immense economic importance. Jute ranks fourth in value of all the productions of India. If it can be grown in the country at all, it ought to be second only to cotton in industrial and commercial importance. The writer urged the trial of this experiment on a large scale. Letters received from time to time giving the practical detail of actual experiments already made, strongly confirm his belief that this important staple can be added to the growths of the Southern States and Lower California.

JUTE CULTURE IN INDIA.

Before reading an interesting account of jute in India, where it has been cultivated for hundreds of years, President N. C. Ely stated that it contained the results of personal observations upon the growth of this plant, made by the Professor during a recent visit in India.

The land intended for this crop is usually broken up in the fall, thoroughly pulverized and richly manured. The seed is sown broadcast, from twenty to thirty pounds to the acre. The time for sowing varies with the conditions of soil and climate, in some localities being planted in February, March, and April, and in others as late as July. Sometimes two crops are raised to the acre, but this is found very exhaustive to the soil. After the jute has come up it is carefully thinned, and then left without much further tillage to ripen. It matures in twelve or fifteen weeks. The plant sometimes grows to a height of twenty feet, but the average height is ten or twelve feet, and the diameter of the butts varies from half an inch to an inch and a half. One variety, which is extensively cultivated, has a smooth white bark and wide spreading branches. The jute is cut while in flower, because the fibre is then more glossy and less woody. The seed ripens one month after flowerage, and the fibre has then become so woody as to lose much of its commercial value. After cutting, the jute is usually kept two or three days till the leaves fall off, and then it is immersed in water. The period of submersion varies, according to the temperature, etc., from three or four days to a month. The methods of steeping practised by the natives are numerous, but in all cases the action of the water is to loosen the fibrous bark from

the woody stalk. After its removal the inner bark is stripped of its rind, freed from all woody adhesions, and thoroughly washed and dried. It then readily separates in minute fibres, and is ready for market or for domestic spinning. No portion of this substance is wasted. The leaves and ashes are used for manure, the stalks for baskets and fuel, the seeds for oil and oil-cake, the roots for fuel and paper, and the silky floss, which escapes from the fibres in the process of manufacture, is wrought into hats. Until recently the Government of India has never fostered the cultivation of jute, but without its patronage this industry has, within the last half century, risen to a world-wide importance.

THE NEW INDUSTRY AT THE SOUTH.

Under the auspices of the Department of Agriculture, the experiments in growing jute have been successfully tried in a number of the Southern States. These trials have been sufficient to establish the fact that wherever in the Southern States there is a hot, damp climate, and a moist soil of sand-clay, or alluvial mould, jute can be profitably raised. Indeed, the condition of the soil and climate, and the practical test of experiments already made, have been so favorable as seriously to alarm the Government of India. The official report of an Indian commission, appointed by the State, has expressed a grave apprehension of American competition in the cultivation of jute.

According to the estimates of practical experience, Professor Waterhouse says that jute butts can be produced in the United States for three cents a pound in currency, and the fine fibre for eight cents. The average price of India butts in this country is three and four cents in gold, and the fine yarns are worth eight or ten cents a pound in gold. The difference between the cost of Indian and American jute is not, however, the only source of profit. There is a relative economy in the cultivation of this plant. According to Southern testimony it is four times as productive as cotton or flax, while at the same time it does not require one-tenth of the labor to raise it. In the manufacture of hemp and flax there is a loss of fifteen or twenty per cent. of the material, while the loss in working jute is only about nine per cent. Another promise of success in this new industry is that the labor of the South is far more intelligent than that of India, and is generally under skillful guidance. In India the best soil is usually devoted to raising jute for market, and the poorer land is left for the production of seed. In the United States, on the contrary, a portion of the best land has been reserved for seed, and the result is a signal improvement in the quality of the seed, American seed being one-sixth heavier than that of India. Then, too, the broadcast sowing of Bengal is uneven and wasteful. Our patent drills save ten to fifteen pounds of seed to the acre, do the work with far greater rapidity and equality of distribution. The efficacy of our agricultural machinery promises to neutralize the seeming advantage which India possesses in the cheapness of its manual labor.

Dr. A. S. Heath said that jute is a very successful crop in Louisiana, where the imported seed make a very strong plant, growing in some localities as thick as wheat. It can also be profitably raised in other Southern States, where wet, moist soils and a mild climate pre-

vail. It is only killed by frost. The average crop is about three thousand pounds to the acre, with one thousand pounds of seed. It is either sowed broadcast or planted in drills, and is cut with a reaper or mower, bound and sent to the decorticating and crushing mill.

While it costs less to grow jute than cotton, this gentleman thought it could never come into extensive competition with it, any more than rubber does with leather.

In Louisiana jute sown in April is cut in July; that sown in May is harvested in August, and that planted in June is cut in September, thus giving a succession of crops, which greatly facilitates labor. The last crop left till frost kills the plant is used for making paper. Of the refuse in clearing, fifty per cent. is employed for paper, and the balance for manure. The hatchel refuse is utilized in upholstery.

Nine-tenths of Manila paper is made of jute. Oilcloths, carpets, gunny-bags, burlaps, sacks, and paper also call upon this commodity. While better suited to coarser materials, jute is nevertheless employed with cotton, flax, etc., in the backings of silks, velvets, and satins to cheapen these fabrics. Jute is also largely used in making up ladies' switches, in place of human hair.

IMPORTANT INCIDENTAL ADVANTAGES.

There are also important incidental advantages in connection with the cultivation of jute, which Dr. Heath thought should not be overlooked. The vigorous and luxurious growth of the plant almost exterminates weeds from the soil in which it is sown, while the bitterness of its juice repels the attacks of insects. A cotton field surrounded by a belt of jute is effectually protected from the destructive caterpillar so much dreaded. This crop should come in rotation with other crops; and all waste materials devoted to manure should be composted with other manures and applied as usual.

A stranger present said that one of the great drawbacks to jute culture in this country is that machinery which works up flax cannot manufacture the long fibre of the jute without breaking it. It is usually parted into three lengths. To manufacture the full length of the fibre new machinery is required.

A member added that while a more humid climate is essential to the successful growth of this staple, the physical characteristics of the soil in which the plant flourishes greatly vary. It thrives with an almost equal luxuriance upon the highlands or alluvial bottoms. It will grow upon comparatively dry uplands or in flooded valleys, but it prefers a high, moist, sandy loam.

The same member explained, in answer to questions asked, that in trade "jute butts" are sections twelve to fifteen inches in length of the lower end of the plant. These coarser portions are made into heavy baling and bagging. The "fibre" is the long silk yarn which is woven into fine fabrics, and the "rejections" are parts of fibre, which, in consequence of being stained, tangled, or woody, are unfit for delicate manufactures. The rejections are generally worked up with the butts. He also stated that the superior cheapness and durability of jute are rapidly displacing flax and hemp for many purposes. In our markets jute bags are worth from one-quarter to one-half a cent per yard more than flax bags. Especially for bagging and cotton-bailing is jute fast superseding the use of other fibres.

THE CLIMATE OF CALIFORNIA.

The Society was furnished the following able and interesting paper, by the Hon. B. B. Redding, on the climate of California, being a scientific examination of the subject, and conclusions drawn from twenty-five years' observation :

The temperature of the air, course of the wind, rain, and snowfall, are taken daily at seven A. M., two P. M., and nine P. M., at eighty-three stations of the Central Pacific and Southern Pacific Railroads and their branches, extending from San Francisco to Ogden, Lathrop to Fort Yuma, San Francisco to Soledad, Sacramento to Redding, Sacramento to Williams, and Vallejo to Calistoga and Petaluma. The temperature of the water is also taken at several points, including five stations on the Sacramento and San Joaquin Rivers. In addition to the observations made by the United States Signal Service, the Coast Survey, and those made at all the military posts, we thus have three daily observations recorded at eighty-three stations on the Pacific Coast, extending through eight degrees of latitude and twelve degrees of longitude. These have been kept for the use of the companies and for the benefit of the people residing in the vicinity of the various stations. As each new station is reached in the construction of a railroad, the agent is supplied with proper instruments and the record required to be kept. On all the roads first constructed, the record has been kept for more than ten years. On the new road over the Colorado Desert, from the San Bernardino Mountains to Fort Yuma, of course the record is only for the past year. The record of these three daily observations for even fifty stations for ten years, makes an army of figures that it is almost appalling to attack; yet, when reduced, and the mean obtained, the results are of great importance, not only to the farmer, but to every citizen. As an illustration of the financial importance of these records that came within my personal observation: In eighteen hundred and sixty-nine some gentlemen made an investment of nearly fifty thousand dollars, near Summit Station, in the construction of sheds over some lakes, under which to cut ice for the San Francisco market; they found it impossible to erect any wooden structure sufficiently wide for their purpose, that would bear the weight of snow that annually falls at that point. Their structures are in ruins, and every dollar put into the enterprise (other than it gave a small army of men employment in the erection of their buildings) is lost. Could the gentlemen have consulted these records, they would have seen that the annual average rainfall at this point is more than five feet. Nearly all of this falls in the form of snow, and is equal—if the snow that falls did not become compact or melt—to a bank of snow on their lakes and the roofs of their buildings each winter of sixty feet in depth. If the farmers who have made settlements on the west side of the San Joaquin River, and have tried unsuccessfully for years to raise crops upon them without artificial irrigation, could have seen the results in the hard unyielding facts these figures disclose, they would know

that they hope in vain for rain, and also hope in defiance of the laws that control climate.

A LAW OF CLIMATE.

They live in a section of the State that is an exemplification of the truth of the law well stated by Guyot: "That when a mountain chain opposes a horizontal wind, the air is forced up along the slopes; its vapors are condensed, and water the side exposed to the wind, while, on the opposite slope, the same wind descends into the valley dry and cloudless."

The western slope of the Mount Diablo Range, in the latitude of San Francisco, receives about an annual average of twenty inches of rainfall. Ellis—in the same latitude on the eastern side of the same range—has but an annual average of nine and twenty-two one-hundredths inches. Modesto, a few miles further south, on the opposite side of the San Joaquin, has but eight and ninety-five one-hundredths inches. Still further south these averages continue to decrease, until, on the west side of Tulare Lake, the annual rainfall cannot exceed three inches. The record at this point has been kept for so short a period that the amount cannot be stated positively; but applying to this section of the State the well known laws controlling climate, it will be found in time that this estimate is not far from correct. I have thought it of interest to condense some of the results of all these observations, as they show that, considering the elements of disturbance in the facts that this State has on one side the vast Pacific Ocean, presenting a uniformly radiating and absorbing surface, and on two other sides vast tracts in the Colorado, Mohave, and Nevada Deserts, presenting rapidly radiating and absorbing surfaces, yet California is controlled by the same universal laws that control climate in other places. A statement of some of these laws, and the application of them to the records obtained of the temperature, prevailing wind, and annual rainfall, and it will be seen that until the Isthmus of Panama sinks beneath the ocean and allows the Gulf Stream to pursue its way into the Pacific, or some other great change takes place in the physical geography of the earth, the climate of any given section of this State is not exceptional, but just such as these laws show it should be. Professor Joseph Henry, in his "Contributions to Meteorology," has done so much to clear up the mystery of the winds, and has stated these laws so concisely, that it is a pleasure to quote from him. He says:

If the earth were at rest, it is obvious that the air expanded by the sun's heat at the equator would rise up and flow over, descending, as it were, an inclined plane towards the poles, where it would reach the earth's surface and flow back to the equator, and thus a perpetual circulation would be maintained. It is further evident that, since the meridians of the earth converge, all the air that rose at the equator would flow along the upper surface entirely to the poles, but the greater portion would proceed no farther north or south than latitude thirty degrees, for the surface of the earth contained between the parallel of this degree and the equator is equal to that of half of the whole hemisphere. Portions, however, on the northern hemisphere would flow on, to descend at different points further north; and of these portions some probably would reach the pole, and there sink to the surface of the earth, and from that point diverge in all directions in the form of a northerly wind.

Between the two ascending currents near the equator there would be a region of calms or variable winds. The currents which flow over towards the poles would descend with the greatest velocity at the coldest point, because there the air would be densest. Now, the earth is in rapid motion on its axis from west to east, and every particle of air, therefore, flowing from the north to the equator would partake of the motion of the place at which it started, and would reach in succession lines of latitude moving more rapidly than itself. It would therefore lag behind continually, and appear to describe on the surface of the earth a slightly curvilinear course

towards the west, and hence the northeast trades in the northern hemisphere and the southeast trades in the southern hemisphere—where the conditions are reversed—but both flowing towards the belt of greatest rarefaction. The particles of air approaching the equator will not ascend in a perpendicular direction, but will rise continually as they advance towards the west along an ascending plane, and will continue for a time their westerly motion in the northern hemisphere. After they have commenced their return towards the north, and until they arrive at parts of the earth moving more rapidly than themselves, they will gradually curve towards the east, and finally descend earthward, to become again a part of the surface trade winds from the northeast. The atoms will move westward as they ascend—first, on account of the momentum in that direction; and, second, because, as they reach a higher elevation, they will have less easterly velocity than the earth beneath. They will also be affected by another force, first pointed out by Mr. Ferrell, due to the increase of gravity which a particle of matter experiences in traveling in a direction opposite to that of the rotation of the earth. The last mentioned cause of deflection will operate in an opposite direction on atoms when they assume an easterly course.

The result of the complex conditions under which the motive power acts in such a case would be to produce a system of circuits inclined to the west, the eastern portion of which would be at the surface, and the western portion at different elevations, even to the top of the atmosphere. The greater portion of the circulation would descend to the earth within thirty degrees of the equator, giving rise to the trade winds; another portion would flow further north, and produce the southwest winds, and another portion flowing still further north would descend to the earth as a northwest wind. The air which descends in the region of the north pole would not flow directly southward, but, on account of the rotation of the earth, would turn towards the west and become a northeasterly current. It might appear, at first sight, that the north wind which descends from the polar regions would continue its course along the surface until it joined the trade winds within the tropics; but this could not be the case, on account of the much greater western velocity which this wind would acquire from the rapidly increasing rotary motion as we leave the pole. There would, therefore, be three distinct belts in each hemisphere, namely, the belt of easterly winds within the tropics; the belt of westerly, within the temperate zone; and the belt of northwesterly, at the north.

Without doubt these laws would operate uniformly if the earth were a perfectly smooth sphere, with a uniformly radiating and absorbing surface, but it is broken by mountain chains, covered by large tracts of desert, which rapidly absorb and as rapidly radiate heat; about three-fourths of its surface is water, which slowly absorbs and as slowly gives up its heat; the water of the ocean is in circulation, producing great currents, which, in this hemisphere, carry a portion of the heat of the tropics into northern latitudes, and the cold of the north into warmer latitudes. All of these causes interrupt the uniformity of the flow of the æreal current, change its temperature, and give rise, as well as direction, to local winds. The zones of tropical winds move bodily to and fro with the vertical sun northward during our summer, and southward during our winter. The belts of westerly winds in the temperate zone move north and south with these. As California is within the northern temperate zone, it is primarily to the movement as a body north and south of this belt of wind that we are indebted for our

DRY SUMMERS AND WINTER RAINS.

Where, within the tropics, the northeastern and southeastern trade winds meet is a region of calms and rains. This belt of calms and rains, as has been stated, moves northward and southward with the sun's declination. Where, within the temperate zone, the northern and northwesterly winds from the polar regions meet the westerly return trade winds, is a region of storms and rains. These belts also follow the sun's declination north and south. Applying these laws to this coast, at our midsummer the vertical sun would be on the tropic of Cancer, and in that vicinity the northeasterly and southeasterly trade winds would meet, create ascending air, consequently calms; this air, laden with moisture, would rise into cooler regions, when a portion of its moisture would be precipitated, making trop-

ical rains; this air would flow north and south towards the poles. Confining our view to that portion which would flow towards the north pole, the larger part of it must descend to the earth within thirty degrees of latitude, under the law as stated by Professor Henry; as in going north it continuously has to pass over a portion of the earth which is moving less rapidly than the portion it has left, it is deflected and becomes a southwest wind. The greater part of this upper current having descended to the earth within thirty degrees and returned to join the trade wind, the remainder would flow towards the pole, portions descending in its course at all points where the rarefaction of the air near the earth's surface would permit. These descending currents cause the local variable winds of our temperate zone, but the aggregate of all of them is the prevailing southwest return trade wind. The descending currents cannot give rain, as they only fall to the earth when they become colder than the air near the earth's surface. In falling they are constantly arriving at places of warmer temperature than those they have left; they, therefore, change to a condition of taking up moisture, rather than of parting with it. Where the great body of the descending return trade wind reaches the earth between latitudes twenty-eight degrees and thirty-five degrees must, therefore, on this coast, be comparatively a rainless region. Other lessening portions of the upper current would pass on until they met the prevailing northerly wind from the polar regions, when their temperature would be lowered and their moisture condensed and fall as rain. The conflict of this descending current with the polar wind would create storms and give rise to electrical phenomena. The prevailing northerly polar wind reaches to about latitude sixty degrees, varied by the declination of the sun.

This view of the causes of the tropical, temperate, and polar zones of prevailing winds is in accordance with the theoretical deductions of Professor Ferrell, concerning the course of atmospheric currents moving on a sphere, and appears to be confirmed by the belts of low barometer prevailing in the vicinities of the equator, and of latitude sixty degrees. The polar wind, being colder, is heavier than the return trade wind, and where they meet the tendency is for this polar wind to become a surface wind, and prevent the upper current from reaching the earth until it has been reduced to the same temperature. The operation of these general laws can be more clearly seen on this coast than on that of the Atlantic and Gulf States. There the northeast trade winds are forced into the great cauldron of the Gulf of Mexico. The Cordilleras of Central America and Mexico form a wall against their progress; they rise, turn to the north as an upper current, and return to the earth as southwest winds.

The Rocky Mountains, one great chain of which extends from the center of the continent northwesterly to the Arctic Ocean, assist in the deflection. The great prairies extend in an unbroken line in the same direction from the mouth of the Mississippi to the same frozen ocean at the mouth of the Makenzie River, in about latitude sixty-two degrees. Professor J. W. Foster, in his work on "The Physical Geography of the Mississippi Valley," states that the sources of the Mississippi River are but one thousand six hundred feet above the ocean. Professor Coffin has shown from the records in the Smithsonian Institute, in his article on the "Winds of the Northern Hemisphere," that between latitudes sixty and sixty-six degrees there

prevails a belt of easterly and northeasterly winds. These winds, coming from the Arctic Ocean, meet the great chain of the Rocky Mountains, are deflected into northwest winds and pass unobstructed along this great stretch of prairie land into the States east of the Rocky Mountains. The conflict between the northwest polar winds and the moisture-laden southwest winds from the Gulf of Mexico, gives all the Atlantic States, north of Florida, their summer rains. As far back as eighteen hundred and fifty, Professor Espy, in his second report on Meteorology to the Secretary of the Navy, without, at that time, more than suspecting the cause, reported as the result of a long series of observations, that in the northern part of the Atlantic States the winds generally, in great storms, set in from north of east and terminate from north of west, and in the southern part of the Atlantic States they set in from south of east and terminate from south of west.

The States east of the Rocky Mountains are the great battle ground on this continent of these hot and cold winds.

It is doubtful if the Atlantic trade winds ever give rain to California. That portion which passes the mountains through the valley of the Rio Grande, precipitating its moisture on the White Mountains and Black Hills of Arizona, which, by the meteorological records of the Smithsonian Institute, are shown to have an annual average of twenty inches of rain.

That these general laws may be applied to California as the cause of our climate, I will assume to follow a given portion of air along well known points on the coast. At midsummer, at noon, the sun would be vertical in Southern California, just north of Cape St. Lucas. In this vicinity this portion of air having been a part of the trade wind would have become heated and saturated with moisture. It would rise until it met colder regions, when it would part with some of its moisture; a portion would return to the earth within thirty degrees, again to join the trade winds, and another portion pass on towards the north as a part of the great upper current. Under the operation of Professor Henry's law, the greater part must return to the earth between latitude thirty degrees, and, say, latitude thirty-five degrees; the remainder would flow on towards the pole until it met the prevailing polar northwesterly winds; at these points there would be fogs and summer rains. Wherever the polar wind forced its way south of this it would condense the moisture of these descending return trade winds and give rain. This they would do until they had passed so far south that their temperature would be raised to that of the descending return trades, when, of course, no moisture could be precipitated. It is these polar winds forcing themselves among the descending return trade winds that give British Columbia, Washington Territory, and Northern Oregon their summer showers. Should they force themselves further south, they in their passage have to pass into warmer latitudes; they would, also, meet the heat of our great valleys and deserts, and become as warm as our prevailing summer wind, and therefore could not give

CALIFORNIA SUMMER RAINS.

But, from midsummer, the sun is for six months moving south, taking with him the great belts of the winds of the tropical, temperate, and polar zones, until, at our midwinter, his rays at noon are

vertical just north of the northern part of Chile, in South America. These belts, moving south with the sun during six months, the region of conflict between the polar winds and the variable winds which in summer were over British Columbia, Washington Territory, and Oregon, have now moved south over Oregon and the northern and middle parts of California. The temperature of the earth's surface and the air in contact with it, have been lowered by the withdrawal of the sun's more direct rays, and the polar winds are permitted to reach farther to the south without increasing their temperature. The region of calms and the southern limit of the variable winds have, of course, also moved south with the sun beyond the tropic of Cancer. At this season, in the Pacific, the trade wind is not usually found north of latitude thirteen degrees. When, in winter, the descending return trade wind, coming from the southwest, meets the coast south of Cape St. Lucas, it is forced by the Cordilleras and the configuration of the main coast into the Gulf of California, and is deflected into a course from the southeast, or to be more exact, as shown by the records kept by Dr. Gibbons, into a course from the south-southeast. Without doubt, the southwest return trade wind which strikes the coast of Lower California in winter, north of Cape St. Lucas, is deflected by the high mountains parallel to the shore, and also passes over our coast counties as a southeast wind. H. S. Warner, in a paper read before the American Association for the Advancement of Science at its Baltimore meeting, in eighteen hundred and fifty-eight, was the first to note the fact that the waters of the Gulf of California supply the moisture to the southeast wind that bears to us our rains. It may be objected that the Gulf of California has not sufficient area from whence could be delivered the great volume of southeast winds that at times, during our winters, flow over this State. The gulf is not the cause of this wind, but it is the channel through which it flows, and gives to it direction. When the sun is vertical on the coast of Bolivia, just north of Chile—at our midwinter—he has carried south with him the northeast trade winds, until, as has been stated, they do not prevail north of about latitude thirteen degrees. The region of calms, where the great body of the upper current returns to the earth again to join the trade winds, is, at this season, between latitudes thirteen and eighteen degrees. North of this region of calms, at this time, those portions of the upper current which pass further north, descend to the earth, under Professor Henry's law, as southwest winds. At latitude twenty degrees the west coast of Mexico projects a bold headland into the Pacific Ocean, known as Cape Corrientes. South of the cape the trend of the coast for nearly two thousand miles is east-southeast; north of this cape, the trend for more than one hundred miles, to Mazatlan, is north; from Matzalan to the head of the Gulf of California, a further distance of six hundred miles, it is north-northwest. The Sonora arm of the Cordilleras rises above the table land of Mexico at latitude twenty degrees, and runs north-northwest along the coast, nearly to the head of the Gulf of California. All of these southwest winds that strike the coast from Cape Corrientes north to Cape St. Lucas are deflected by these mountains, and forced up the gulf as south-southeast winds. The United States Coast Survey have lately completed the survey of this gulf and parts of the Mexican coast north of Cape Corrientes. When their record of observations of the course of the prevailing winds in winter, the barometric pressure and

the temperature of the air and water is published, I feel confident that it will be found that the southwest return trades prevail in winter north of Cape Corrientes, and are turned by the mountains and the coast up the Gulf of California, and so over this State as our southeast winds. It comes from this gulf warm and laden with moisture, and passes over the Colorado and Mohave Deserts. These deserts, as shown by the meteorological records of the Smithsonian Institute, have a mean winter temperature of from forty-eight to fifty-six degrees. This is not sufficiently low to precipitate its moisture, and it passes on until it meets the Sierra Nevada and Coast Range. In ascending these it rises into cooler regions, finds a mean winter temperature of forty degrees, and gives up some of its moisture. When it flows down into the southern end of the great valley of the Tulare, it meets a mean winter temperature of forty-eight degrees, which is higher than that of the mountains it has just passed. It therefore retains its moisture and passes on until it meets a cold polar wind, and has another portion of its moisture condensed in a rain-storm, or failing to meet this, passing still further north until its moisture is condensed by the prevailing low temperature of a higher latitude. It is of frequent occurrence in winter that a gentle southeast wind will blow for days, giving no rain south of the latitude of San Francisco, but cloudy weather at the northern end of the Sacramento Valley, and light showers and rains from Red Bluff to Oregon. Therefore, the northern part of the State should receive more rain than the southern, and the mountains more than the valleys. The least rain should be in the hot deserts and on those sides of valleys most sheltered by mountains from the moisture bearing winds.

THE FIRST PROPOSITION,

That the northern part of the State should receive more rain than the southern appears to be confirmed by the following exhibit of the rainfall in the Sacramento, San Joaquin, and Tulare Valleys. These, in fact, constitute one great valley; all of it has the Sierra Nevada on the east, and the Coast Range Mountains on the west. A line drawn through its center in the line of the rain-bearing wind south-south-east from Fort Reading to Sumner, would at all points be about an equal distance from the ocean, and also an equal distance from the Nevada Desert. All the stations relatively to their surroundings are therefore similarly situated, and general laws have full operation free from local disturbance. Commencing at the north end of the valley:

STATIONS.	Latitude -----	Longitude -----	Height above ocean -----	Extent of series.	Annual mean of rain in inches.
Fort Reading -----	40° 30'	122° 05'	674 feet.	1852-1856	29.11
Red Bluff -----	40° 10'	122° 15'	307 feet.	1872-1877	18.41
Tehama -----	40°	122° 08'	222 feet.	1870-1877	16.30
Chico -----	39° 40'	121° 50'	193 feet.	1871-1877	21.99
Marysville -----	39° 21'	121° 30'	67 feet.	1871-1877	17.46
Sacramento -----	38° 34'	121° 28'	30 feet.	1849-1877	18.75
Stockton -----	37° 57'	121° 17'	23 feet.	1854-1857 } 1871-1877 }	13.23
Modesto -----	37° 40'	120° 55'	91 feet.	1871-1877	9.60
Merced -----	37° 20'	120° 26'	171 feet.	1871-1877	9.36
Borden* -----	36° 55'	120°	274 feet.	1875-1877	3.32
Tulare -----	36° 14'	119° 18'	282 feet.	1875-1877	4.83
Delano -----	35° 43'	119° 12'	313 feet.	1875-1877	4.03
Sumner -----	35° 23'	118° 58'	415 feet.	1875-1877	3.92

* Fort Miller, twenty-five miles northeast from Borden, with a greater elevation of one hundred and twenty-eight feet, from a record of nearly seven years, receives an annual average of eighteen and ninety-nine one-hundredths inches.

THE SECOND PROPOSITION,

That the mountains should receive more rain than the valleys, is also confirmed by the following exhibit, wherein have been selected successive stations on a line as nearly as possible east from San Francisco, thereby avoiding any increase of precipitation due to increase of latitude. The law as stated by Guyot, deduced from experiment and observation, is, that an elevation of three hundred and fifty feet is sufficient to diminish the mean temperature of a given place by one degree of Fahrenheit; that is to say, the effect is the same as if the place were situated seventy miles further north. Commencing near the center of the Sacramento Valley, at the lowest elevation above the sea:

STATIONS.	Latitude -----	Longitude -----	Height above the sea -----	Extent of series.	Annual mean of rain in inches.
Stockton -----	37° 57'	121° 17'	23 feet.	1854-1857 } 1871-1877 }	13.23
Sacramento -----	38° 34'	121° 28'	30 feet.	1849-1877	18.75
Rocklin -----	38° 45'	121° 12'	249 feet.	1870-1877	17.30
Auburn -----	38° 52'	121° 02'	1,363 feet.	1870-1877	29.79
Colfax -----	39° 06'	120° 55'	2,421 feet.	1870-1877	42.72
Alta -----	39° 12'	120° 52'	3,612 feet.	1870-1877	47.32
Emigrant Gap -----	39° 18'	120° 35'	5,230 feet.	1870-1877	51.49
Cisco -----	39° 19'	120° 28'	5,939 feet.	1870-1877	55.32
Summit -----	39° 20'	120° 15'	7,017 feet.	1870-1877	58.48

THE THIRD PROPOSITION,

That the least rain should be in the deserts, is confirmed by the records kept at various stations; commencing south and proceeding north:

STATIONS.	Latitude -----	Longitude -----	Height above the sea -----	Extent of series.	Annual mean of rain in inches.
Fort Yuma -----	32° 44'	114° 36'	200 feet.	1851-1867 1869-1873	3.06
Fort Mohave -----	35° 06'	114° 35'	604 feet.	1859-1866 1869-1873	
Wadsworth -----	39° 42'	119° 15'	4,077 feet.	1870-1877	3.21
Hot Springs -----	39° 51'	119° 02'	4,070 feet.	1870-1877	3.90
Brown's -----	40°	118° 35'	3,925 feet.	1870-1877	3.53

The Colorado and Mohave Deserts are in the zone where the great body of the descending southwest return trade winds reach the earth. It has been shown that these descending currents cannot give rain, as, in falling, they continuously arrive at regions of increasing temperature. It is, therefore, in this zone, on both sides of the equator, that almost all the great deserts of the earth are situated, and primarily to this cause is their existence due. The Mohave and Colorado Deserts are in the same latitudes north of the equator as the Deserts of Sahara and Arabia. The great desert of the interior of Australia is in the same latitude south of the equator as the Desert of Atacama, in South America.

The stations of Wadsworth, Hot Springs, and Brown's, in the above table, are in Nevada, and in the region of variable winds, and are made desert by want of rain; but better illustrate the last proposition that less rain should fall on the opposite side of the mountains to that exposed to the moisture bearing winds. For further illustration of the proposition, I have selected stations in different parts of this State and Nevada. Fort Tejon, latitude thirty-four degrees fifty-three minutes north, longitude one hundred and eighteen degrees fifty-three minutes west, on the south side of the Tehachapi Mountains, where the Sierra Nevada and Coast Range unite, forming a wall against the southeast wind, has an elevation of three thousand two hundred and forty feet. From a record of five years, it has an annual mean of nineteen and fifty-three one-hundredths inches of rain. Caliente, a station of the Southern Pacific Railroad, thirty miles northeast, elevation one thousand two hundred and ninety feet upon the north side of this range, from a record of two years, has but an annual mean of six and thirty-eight one-hundredths inches; and Sumner, thirty-one miles north of Tejon, with an elevation of four hundred and fifteen feet, receives but three and ninety-two one-hundredths inches. The Tehachapi Mountains precipitate some of the moisture from the southeast winds, and, under the law as stated by Guyot, they descend into the valley dry and cloudless.

The summit of Mount Diablo, elevation three thousand eight hundred and fifty-six feet, from a record of two years, receives an annual mean of twenty and eighty-five one-hundredths inches. Livermore,

in one of its valleys, elevation four hundred and eighty-five feet, from a record of six years, has an annual mean of thirteen and twenty-eight one-hundredths inches, while Ellis, at its northeastern base, with an elevation of seventy-six feet, from a record of six years, receives but an annual mean of nine and twenty-two one-hundredths inches. Benicia, at its northwestern base, elevation sixty-four feet, from a record of thirteen years, receives an annual mean of thirteen and seven one-hundredths inches. This increase at Benicia shows an interference with the law, which, I think, may be explained by the indraught of air into San Pablo Bay from the Bay of San Francisco, through the narrow channel, on the bank of which Benicia is situated. General Myer, Chief of the Signal Service, in his circular on the practical use of meteorological reports, says that "Wind which on the ocean would blow with a certain velocity, will have but one-half or one-third of that velocity when blowing over a hilly country." While Diablo robs Benicia of its rain, it is, in part, compensated from the currents of moisture-laden air that flow up the Straits of Carquinez, in consequence of meeting with less resistance.

The summit of the Sierra Nevada, where it is crossed by the railroad, as has been shown, receives an annual mean of fifty-eight and forty-eight one-hundredths inches. Boca, thirteen miles northeast in an air line, but one thousand four hundred and eighty-four feet below, on the eastern flank, for the same number of years, receives but an annual mean of fourteen and fifty-eight one-hundredths inches, and Reno, thirty-one miles in an air line in the same direction, and one thousand five hundred and ten feet below the summit, and nearer the eastern base of this range of mountains, receives for the same time but an annual mean of four and seventy-eight one-hundredths inches. There are two stations, one on each side of the Sierra Nevada, whose elevations above the sea are nearly the same, Alta on the southwestern side, and Brown's, on the northeastern—the first has an elevation above the sea of three thousand six hundred and twelve feet, the latter of three thousand nine hundred and twenty-five feet. Alta received, during a record of seven years, an annual mean of forty-seven and thirty-two one-hundredths inches, and Brown's, for the same period, three and fifty-three one-hundredths inches. Dr. Henry Gibbons has shown from his daily record of the climate of San Francisco that whatever course the wind may have near the surface of the earth at this place, the upper currents of air, whenever their clouds could be seen, were moving from the southwest. The records from the station at the summit of the Sierra show the same fact. It is not unfrequent that the Sacramento Valley is filled with a southeast wind—it may be giving rain—while a cloud bearing southwest wind is blowing at the summit. When this southeast wind becomes a storm, it flows up the cañons, ravines, gulches, and river courses as a southwest wind, and joins this upper current, for the general course of all the ravines and river courses of the Sierra is from the northeast to the southwest, and the wind, like other fluids, takes the course of least resistance.

It is believed that an early fall of snow in the Sierra increases the rainfall in the Sacramento Valley. There is not yet sufficient data to hazard a positive conclusion on the subject. All the moisture bearing winds pass from the valley over this snow into the great basin of Nevada; therefore, an early fall of snow, storing up a cold temperature, would probably increase the subsequent fall on the

Sierra. If it shall be found to increase the rainfall in the valley, the cause can be ascribed to the fact that the belt of snow is a store-house of cold, lowering the temperature of the adjacent air, which, by increase of weight, flows down into the valley, and lowers the temperature of the air at the lowest places in the valley. Tulare, near the shore of Tulare Lake, which is the lowest point of that portion of the valley (the town being two hundred and eighty-two feet above the sea), is at the base of the highest mountains in California. The cold air flowing down from these mountains reduces its winter temperature (December, January, February) to a mean of forty-five degrees and fifty-seven one-hundredths, while Auburn, one hundred and fifty-eight miles further north, and with one thousand and eighty-seven feet greater elevation, situated on the long spur jutting into the valley which the railroad climbs to cross the mountains, for the same months has a mean temperature of forty-six degrees and seventy one-hundredths, the mean of the winter at Tulare being more than one degree colder than at Auburn. Chico, two hundred and six miles north of Tulare, and eighty-nine feet less in elevation, has a winter climate one and a quarter degrees warmer than Tulare, its mean winter temperature being forty-six degrees and eighty-two one-hundredths. If it were not for the cold air from the mountains flowing to the lowest places in the valley, Tulare would be entitled to a winter temperature of five and a half degrees warmer than that of Auburn, two being due to decrease in latitude, and three and a half to decrease in elevation.

COAST.

The coast counties are controlled by the same general laws that govern other parts of the State. There is more rain north than south; more on the hills than in the valleys; more on the south side of hills than on their northern and eastern exposures. Their proximity to the ocean gives them a more even temperature than in the interior, making them cooler in Summer and warmer in Winter. From the sea coast to the summits of the coast range of mountains they are also subject to the influence of the Japan gulf stream. This stream, according to Professor Davidson, in the *Alaska Coast Pilot*—"Starting with a maximum temperature of eighty-eight degrees, sweeps across the Pacific, and about latitude forty-five to fifty degrees, in longitude one hundred and forty-eight degrees, divides. The main body stretches directly toward the coast of America, is deflected southward and eastward, and runs down the coast of Oregon and California. A branch of this current continues direct to the Alexander Archipelago, and striking the southern part of the coast, is deflected to the northward and westward. It is the warm Alaska branch which causes the high isothermal lines that exist directly on the Alaska coast."

The temperature of this Alaska branch, as observed by him in September, eighteen hundred and seventy-six, was from fifty degrees and six one-hundredths to forty-seven degrees and one one-hundredths, decreasing irregularly. The prevailing westerly winds of those latitudes, warmed by this gulf stream, take from it moisture which is condensed into fog, and precipitated in rain upon the coast when they meet its glacial mountains and the cold air and water flowing down from them. The influence of this current in producing Summer rains extends as far south as the Columbia River; the meteorological records of the Smithsonian Institute showing that

at the mouth of this river there is a mean for the Summer of six inches of rain, and an annual mean of seventy-eight inches. At Sitka, as shown by the Alaska Coast Pilot, from a record kept from eighteen hundred and forty-seven to eighteen hundred and fifty-four, and from eighteen hundred and fifty-five to eighteen hundred and sixty-four, the annual mean is eighty-two and sixty-six one-hundredths inches. For the purpose of ascertaining the effect on our climate of that branch of this gulf stream where it passes down our coast, I procured from Captain Bradbury the logs of twenty-four voyages of the Occidental and Oriental Company's steamers between San Francisco and Yokohama. These voyages were between November sixteenth, eighteen hundred and seventy-five, and December twenty-sixth, eighteen hundred and seventy-six. From these I have gathered the temperature of the air and water, taken at noon, for a distance of nine hundred miles west from San Francisco, and the temperature of the water for the same distance east from Yokohama, Yokohama and San Francisco being very nearly in the same latitude. These distances were selected on each side of the ocean, because there is no marked increase or decrease in temperature either near San Francisco or Yokohama, until these distances have been passed. There has also been gathered the temperature of the water in midocean between these two points; one series for each month at about latitude forty-two degrees and longitude one hundred and eighty degrees, and one series for each month at about latitude thirty-two degrees and longitude one hundred and eighty degrees. The steamers coming from Yokohama to San Francisco usually going north to forty-two degrees, and the steamers from San Francisco to Yokohama going south to thirty-two degrees. The mean temperature of the water for a distance of nine hundred miles east of Yokohama for the year was sixty-five degrees and forty one-hundredths. The mean of the warmest temperatures of the water for the year was sixty-five degrees and ten one-hundredths. The mean of the coldest was sixty degrees and thirty-seven one-hundredths. The warmest on any day was September seventh, eighteen hundred and seventy-six, seven hundred and fifty miles east of Yokohama, when it was eighty-four degrees. The coldest was January fourteenth, eighteen hundred and seventy-six, at the same distance, when it was forty-nine degrees.

The means of the air and water for each month for a year, for a distance of nine hundred miles west of San Francisco, are as follows:

MONTH.	Mean of air.	Mean of water.
January	51° 62-100	53° 10-100
February	53° 75-100	54° 62-100
March	54° 87-100	54° 75-100
April	53° 50-100	50°
May	57° 50-100	57° 25-100
June	58° 75-100	58° 37-100
July	62° 12-100	60° 87-100
August	64°	62° 25-100
September	62°	63° 12-100
October	62° 12-100	61° 50-100
November	61° 25-100	61° 25-100
December	56° 58-100	59° 41-100
Mean for the year	58° 17-100	58° 04-100

The mean of the highest temperature of water which is between six hundred to eight hundred miles west from San Francisco for the year is sixty degrees and thirty-three one-hundredths.

The mean of the lowest which is within one hundred miles west of San Francisco for the year, is fifty-five degrees and fifty one-hundredths. The warmest water on any day was May third, eighteen hundred and seventy-six, eight hundred miles west of San Francisco, when it was sixty-nine degrees. The coldest was April twenty-fourth, eighteen hundred and seventy-six, in the same vicinity, when it was forty-seven degrees.

The mean temperature of the water in midocean for each month, excepting July, when the steamers followed the northern route, was as follows:

MONTH.	Latitude about 32° — Longi- tude about 180°.	Latitude about 42° — Longi- tude about 180°.
January.....	54°	44° 75-100
February.....	58° 25-100	45° 75-100
March.....	55° 75-100	43°
April.....	53°	43° 75-100
May.....	63°	42° 25-100
June.....	61°	44° 75-100
July.....		57° 75-100
August.....	69° 50-100	55° 25-100
September.....	67° 25-100	53°
October.....	65°	50° 75-100
November.....	60° 50-100	53°
December.....	58° 50-100	51° 50-100
Mean for the year.....	60° 52-100	48° 79-100

The coldest water in midsummer, in latitude forty-two degrees, was found March seventeenth and eighteenth, eighteen hundred and seventy-six, when it was forty-two degrees. The warmest was July twenty-first and twenty-second, eighteen hundred and seventy-six, when it was sixty degrees.

The coldest at latitude thirty-two degrees was January twenty-ninth, eighteen hundred and seventy-six, when it was fifty-two degrees; and the warmest, August sixteenth and seventeenth, eighteen hundred and seventy-six, when it was seventy degrees.

From these figures we find that this gulf stream, from the time it leaves the equatorial regions until it reaches east of Yokohama, has parted with its heat until it is reduced to a mean for the year of sixty-five degrees and forty one-hundredths. Traveling to the northeast, crossing the Pacific, and turning south along our coast, it has continued to part with more heat until, when opposite San Francisco and for a distance of nine hundred miles, it is reduced to a mean for the year of fifty-eight degrees and four one-hundredths, a difference of seven degrees and six one-hundredths. That part of the ocean from which comes our southwest winds beyond this gulf stream has a mean temperature for the year of sixty degrees and fifty-two one-hundredths.

I find that the temperature of the air on this part of the Pacific rarely varies more than three degrees from the temperature of the

water over which it is passing. The gulf stream opposite San Francisco is but two degrees and forty-eight one-hundredths colder for the year than the water at latitude thirty-two degrees, longitude one hundred and eighty degrees, for the same time.

This difference, if uniform, would hardly create fogs, but it is not uniform. It frequently happens that the water and air outside this gulf stream are warmed to sixty-five degrees, or a few degrees higher; the moisture in this air passing over our gulf stream when it is fifty-five degrees or lower, is condensed, and produces the fogs that bathe the sides of the hills west of the summits of the Coast Mountains. If these fogs pass the summits they meet the heat of the valleys and are dissipated. It is evident that this gulf stream, where it passes the coast of Alaska, British Columbia, and Washington Territory, is very much warmer than the water of the surrounding ocean. The moisture in the air passing over it is condensed, not only into fogs but heavy rains. As this gulf stream comes south it is constantly arriving at a part of the ocean where the temperature more nearly approximates that which it holds. Opposite San Francisco, as has been shown, it is colder than the surrounding ocean. At some varying point north of San Francisco its temperature must be the same as the ocean, and, therefore, in that region fogs cannot be so prevalent. If the variation of temperature between the gulf stream passing this coast and the surrounding ocean were greater, we should have rains in addition to fogs from the westerly winds; as it is, this gulf stream exercises a marked influence on all those portions of the coast counties lying west of the main divide of the coast range of mountains. The rainfall is more on the coast than in the Sacramento and San Joaquin Valleys in the same latitudes. To exhibit this I have selected a series of stations near the coast south from San Francisco.

STATIONS.	Latitude	Longitude	Height above ocean	Extent of series	Annual means of rain
San Mateo-----	37° 34'	122° 18'	30 feet	1873-1877	15.74
San José -----	37° 20'	121° 52'	94 feet	1873-1877	10.24
Gilroy -----	37°	121° 31'	201 feet	1873-1877	16.45
Hollister -----	36° 50'	121° 23'	292 feet	1873-1877	9.66
Pajaro -----	36° 55'	121° 43'	31 feet	1873-1877	15.46
Salinas -----	36° 35'	121° 46'	52 feet	1873-1877	10.74
Monterey -----	36° 36'	121° 52'	42 feet	1860-1866	15.29
Soledad -----	36° 15'	121° 21'	188 feet	1873-1877	8.07

San Mateo and Modesto are nearly in the same latitude. Modesto has an annual mean of nine and sixty one-hundredth inches of rain, while San Mateo has fifteen and seventy-four one-hundredths. San José and Merced are in the same latitude; the former has ten and twenty-four one-hundredths inches, and the latter nine and thirty-six one-hundredths inches. As we go further south the discrepancy between the coast and interior valleys is still more marked. Soledad and Tulare have the same latitude. Soledad gets a mean of eight

and seven one-hundredths inches, Tulare, four and eighty-three one-hundredths inches. In addition, on the coast, fogs and increased cloudy weather supplement the rain and prevent insolation. Ten or twelve annual inches of rain produce crops of cereals on the coast, when the same amount in the San Joaquin Valley, unless very favorably distributed, would result in failure.

North of San Francisco the same rule appears to apply. Humboldt, on the coast, in latitude forty degrees forty-five minutes, longitude one hundred and twenty-four degrees ten minutes, elevation above the sea of fifty feet, from a record of eleven years receives an annual mean of thirty-five and ninety-two one-hundredths inches. Fort Jones, in the interior, latitude forty-one degrees thirty-six minutes, longitude one hundred and twenty-two degrees fifty-two minutes, and with an increased elevation of two thousand five hundred and twenty feet, from a record of five years receives but an annual mean of twenty-one and seventy one-hundredths inches. I think this decrease is in part due to the fact that Fort Jones lies north of Mount Shasta and the Scott range of mountains, for the Town of Redding, fifty miles south-southeast of Fort Jones, among the foothills at the southern base of Mount Shasta, having an elevation of five hundred and fifty-eight feet above the sea, from a record of two years receives an annual mean of forty-two and eight one-hundredths inches. Petaluma, near the coast, from a record of six years receives twenty-one and fifty-one one-hundredths inches. Sacramento, in the center of the Sacramento Valley, with a latitude twenty-four miles north of Petaluma, eighteen and seventy-five one-hundredths inches.

In addition to the effects due to latitude, to the Pacific Ocean and its Japan gulf stream, the temperature of the State is materially modified by the Colorado, Mohave, and Nevada Deserts, lying south and east of this State. These great reservoirs, daily absorbing and daily radiating heat on the south and east, the gulf stream giving up its heat on the northwest, together combine to send the isothermal lines nearly as far north as they are in the western part of Europe. Redding, at the northern end of the Sacramento Valley, latitude forty degrees thirty-five minutes, longitude one hundred and twenty-two degrees twenty-two minutes, elevation five hundred and fifty-eight feet, has a mean annual temperature of sixty-four and fourteen one-hundredths degrees, within two degrees as warm as Charleston, South Carolina, eight degrees further south, Charleston having, according to Blodgett's "Climatology," a mean of sixty-six and six one-hundredths degrees. Red Bluff, latitude forty degrees ten minutes, longitude one hundred and twenty-two degrees fifteen minutes, elevation three hundred and seven feet, has an annual mean temperature of sixty-six and twenty-two one-hundredths degrees, the same as Charleston. Chico, in latitude thirty-nine degrees forty minutes, has a mean temperature of sixty-two and forty-six one-hundredths degrees, but four degrees less than Charleston. Coming south, through the center of the Sacramento Valley from Redding on the north, to Sumner on the extreme south, and the mean temperatures of the various successive stations show the effect of the radiation of heat in this valley, and the influence of the wind from the cool gulf stream, where it flows through the Golden Gate and up the Sacramento River:

Redding—the mean annual temperature is	64.14 degrees.
Red Bluff—the mean annual temperature is	66.22 degrees.
Chico—the mean annual temperature is	62.46 degrees.
Marysville—the mean annual temperature is	63.62 degrees.
Sacramento—the mean annual temperature is	60.48 degrees.
Stockton—the mean annual temperature is	61.99 degrees.
Modesto—the mean annual temperature is	63.68 degrees.
Mered—the mean annual temperature is	63.16 degrees.
Borden—the mean annual temperature is	66.37 degrees.
Tulare—the mean annual temperature is	64.09 degrees.
Delano—the mean annual temperature is	68.64 degrees.
Sumner—the mean annual temperature is	68.29 degrees.

It will be seen that (for the year) Sacramento is the coolest place in the valley, the temperature increasing both north and south from this point. The breeze from the ocean in summer follows up the river and reaches Sacramento each day about five p. m., and thus reduces the mean of its temperature. It may be from the same influence that its rainfall is increased above the next stations north and south. The reduction of temperature at Sacramento by the air from the ocean passing through the Golden Gate and up the Sacramento River was noted and commented on by the Rev. J. H. C. Bonte, in a paper read before the Agassiz Institute in July, eighteen hundred and seventy-six, on the northerly winds of the great central valley of California. He said: "These winds are more virulent and desiccating in the extreme north and the extreme south ends of the valley; the atmosphere from the Golden Gate and the bays seem to modify the wind ordinarily in the center of the valley."

The tables of temperature confirm his inference. Tulare is four degrees cooler for the year than the next station south and two degrees cooler than the next station north, which may be referred to the influence of the cold air from the high mountains at whose base it is situated, and to the evaporation from Tulare Lake.

Another effect of these deserts is to create a daily sea breeze from the southwest return trade winds that prevail on the coast as surface winds during the summer months. Each day, after the sun rises over these great deserts, they become heated and increase the temperature of the air over their surface; this air rises, and as the whole current of cool air is from the ocean on the west, it rushes in to fill the vacancy. A gentle southwest wind may be blowing on the coast at night or in the morning; by eleven or twelve o'clock the full force of the sun's rays is felt in the Nevada Desert—the gentle breeze has increased to a brisk wind, and continues until evening, after the setting sun has withdrawn his rays and the desert has radiated its heat into space. The gentle southwest wind resumes its sway until the next day, when, from the same cause, the high wind is again repeated. Dr. Gibbons, in an article on the climate of San Francisco in the Smithsonian report of eighteen hundred and fifty-four, says: "Whatever may be the direction of the wind in the forenoon, in the spring, summer, and autumn months it almost invariably works round towards the west in the afternoon. So constant is this phenomenon that in the seven months from April to October, inclusive, there were but three days in which it missed, and these three days were all rainy, with the wind from the south or south-southwest." He adds: "I cannot discover that in any other spot on the globe the wind blows from one octant one hundred and eighty-six days, and from the opposite octant only six days in the year."

The mean summer temperature (June, July, and August) at Wads-

worth and Brown's stations, on the Nevada Desert, on the line of the Central Pacific Railroad, from eighteen hundred and seventy-two to eighteen hundred and seventy-seven, was, for Wadsworth, eighty degrees and thirty-three one-hundredths, and for Brown's, seventy-eight degrees and eight one-hundredths. The summer temperature at Fort Mohave, from a record of six years, was ninety-two degrees and fifty-nine one-hundredths, and at Fort Yuma, from a record of twenty years, ninety-two degrees and seven one-hundredths. Lieutenant Wheeler, in his report of eighteen hundred and seventy-six of the survey west of the one-hundredth meridian, gives the mean temperature of the Mohave Desert for July as ninety-three degrees and six one-hundredths.

Fort Yuma is about five hundred miles south-southeast from Wadsworth. The country intervening is entirely desert.

The indraught of westerly winds from the Pacific in summer does not appear to be alone sufficient to satisfy the demands of the heat of these great deserts. Lieutenant Wheeler states that on the Mohave desert "southeast winds are by far the most prevalent in the summer time." He adds: "It is also easily observed that the clouds and summer rains come from that direction." From this it would appear that the deserts create an indraught from the Gulf of California as well as from the Pacific Ocean.

I have shown that we are in the latitude of the southwest return trades, and that their force is augmented by the effects of the radiation of heat from the deserts on our eastern borders. The configuration of the immediate coast near San Francisco, from Point San Pedro to Point Reyes, and the open Golden Gate, cause an increased quantity of this daily sea breeze to pass by and over this city. This increased wind and accompanying fog, coming directly from over the cool Japan gulf stream, so lowers the summer temperature of this city that, as have been shown by Dr. Gibbons and the records of the Smithsonian Institute, there is no other place in the whole territory of the United States, of the same elevation, that has so low a temperature, the mean summer temperature at the Golden Gate being fifty-six degrees. Another cause affecting the climate of California, to which attention was first called by Guyot, is in the fact that the Sierra Nevada and Cascade Mountains reach the coast of Alaska, and bend like a great arm around its western and southern shore, thus shutting off or deflecting the polar winds that otherwise would flow down over Oregon and California. The cold winds that reach this State are usually from the northwest, and have had their temperature raised by passing over the Japan gulf stream, before that gulf stream has been reduced to the temperature we find it while passing our coast. It has been shown that this northwest wind precipitates its moisture by becoming reduced in temperature where it meets the coast of Alaska, British Columbia, and Washington Territory. It passes inland, following the Cascade Mountains where they leave the coast. As it comes south it is heated by coming into warmer latitudes, its capacity to take up moisture is increased, but it finds none in its course. The Cascades, which are a continuation of the Sierra Nevada, direct it into the Sacramento Valley where it meets still greater heat, which the more increases its capacity for moisture. It, therefore, possesses all the desiccating qualities for which it has become famous, and which are well described by Reverend Mr. Bonte in his article on the subject, to which I have referred. Of course its

influence as a desiccating wind is only felt in the interior, away from the influence of the ocean. The foregoing are some of the principal causes that give to this portion of the Pacific Coast its peculiar climate. The causes of variation in rainfall, temperature, and course of the wind in localities can be ascertained by a series of local and general observations, lasting for a sufficient period to warrant conclusions from the mean obtained. Such observations, if taken and condensed, would be of value to the farmer, to the merchant, and in fact add to the prosperity of every inhabitant of the State. They would also be a contribution to science that would tend to "the increase and spread of knowledge among men." These observations can be taken and recorded for a trifling expense. Everywhere in the State where there are people, there are schools with teachers of more than the average of intelligence. If the Legislature were to pass a law that wherever a school is maintained throughout the year, it should be provided with a rain gauge, barometer, and thermometer, and that the teacher should note and record at three given times daily the amount of rain, pressure of the atmosphere, the temperature of the air, and the course and force of the wind, and report these monthly to the County Superintendent, to be by him transmitted to the Meteorological Department of the University, there would, in a few years, almost without expense, accumulate a mass of local information that would be invaluable. If this were done, and also made universal throughout the United States, in time the whole mystery of the winds would be solved.

From the observations and deductions of Humboldt, Franklin, Henry, Espy, Coffin, Ferrel, Dove, Blodgett, Buchan, and Guyot, we know that while the wind is apparently the most capricious, uncertain, and fitful of terrestrial objects, yet it is governed and controlled by inexorable law. If it bring rain or dry weather, breathe in a zephyr or carry destruction in a tornado, slowly waft the Santa Maria to the discovery of a continent, put in motion a gulf stream, or revolve the sails that drain the marshes of a Zuyder Zee, we now know that each gale, breeze, or zephyr is moving and changing, in efforts to restore the equilibrium of pressure with the force and speed in the ratio of the exigency of each varying occasion; in efforts to restore that equilibrium for which the atmosphere is always striving and which it never attains. We know that all its qualities of varying temperature; its power to hold and give up moisture; to increase and diminish in weight, are also controlled by unyielding laws; that many of these laws have been interpreted and are clearly understood; the others, we also know, science, by patient observation and intelligent research, can discover and interpret.

PACIFIC COAST WOODLANDS.

We take the following from the San Francisco Evening Bulletin of January fifth, eighteen hundred and seventy-eight:

The question of preserving forests is year by year becoming one of greater importance in nearly every part of the civilized world. The well recognized connection between the extent of forest lands and the amount of the annual rainfall brings the subject home to every mind. In Europe efforts were made many years ago to prevent the total disappearance of forests from the face of the land, and in Germany and France forests have been planted which have now attained great size. Germany has a forest law which insures the existence of forests in the empire. At the time of the treaty of Westphalia, in sixteen hundred and forty-eight, there was hardly a tree standing in Pomerania, along the shores of the Baltic. This long stretch of sea-coast was once covered by an immense forest of magnificent oaks. But Sweden remorselessly cut them down to furnish materials with which to build her fleets, and when that province passed out of her grasp nothing but sand occupied the place once crowned with giant oaks. The winds from the sea swept across the bare plain, driving the yellow sand before, and gradually the character of the land was changed from one of fertility to one of barrenness. The climate was changed. The cold winds brought with them no rain, and a desert was the result. But Frederick the Great sought to repair the ravages of the elements by again causing a forest to grow along the coast. He urged that the nation must raise either trees or sand, and succeeded in planting pine trees along the tract once occupied by the oak forest. The change was marked. The country once again began to take on a fresh and vigorous look. The sand was soon replaced by a fertile soil. In course of time the pines were cut out, but in their places up sprang the old oak forest of the by-gone age. Prussia expends annually a large amount upon her forests, but the income from them exceeds the expenses by about seven million dollars. In France, Louis Napoleon expended many millions of francs in planting a forest in a barren portion of the coast bordering upon the Mediterranean. Gradually the character of the land changed here as it had on the shores of the Baltic, and in time a fine soil was produced. There are many portions of the earth once covered with forests and abounding in fertile fields, that are now bare and desolate, owing to the removal of the trees.

The forests of Europe are estimated at five hundred million acres, or twenty per cent. of the whole area of the continent. In North America there are one billion four hundred and sixty million acres of timber land, of which five hundred and sixty millions are south of the British possessions. The proportion of forest land to the total area is twenty-one per cent. In South America seven hundred million acres are covered with forests. Supposing that twenty per cent. of Africa, Australia, and Asia is covered with timber, we have as a grand total of the timber lands of the world seven millions seven

hundred and thirty-four thousand square miles. Prussia has six million two hundred thousand acres of forest; France, two million seven hundred thousand; Austria, two million two hundred and thirty thousand; England, one hundred and twelve thousand three hundred and seventy-six; Bavaria, three thousand two hundred and ninety-four; Hanover, nine hundred thousand; Wurtemberg, four hundred and sixty-nine thousand, and Saxony, three hundred and ninety-four thousand.

In the United States the destruction of forests is going on with fearful rapidity. It is estimated that in this country one hundred and fifty thousand men are employed in getting out sawed lumber alone, and that the capital invested in the business is one hundred and forty-three million dollars. The woods of Maine are fast diminishing, and the few trees that escape the lumberman's ax do not promise a revival of the almost trackless forests which the moose and deer once frequented. In eighteen hundred and seventy-one the immense area of ten thousand acres was stripped to supply the City of Chicago with lumber. At this rate it is plain to see that forests are rapidly vanishing.

THE LUMBER RESOURCES OF CALIFORNIA.

To most people the timber lands of California are thought to be very limited in extent. Few have visited those portions of California where the great forests exist. So little known were the lumber resources of the State that in eighteen hundred and sixty-eight a company was formed in this city to control the lumber interests; but when they began their surveys in Mendocino and Humboldt Counties, they found that there was more timber than they could control, and the enterprise fell through. Only a portion of the lands of the State have been surveyed thus far, and the exact area of the timber lands cannot be ascertained.

SURVEYED TIMBER LANDS IN CALIFORNIA.

The surveyed lands of the State contain the following acreage under timber:

COUNTY.	Acres of timber.	Kind of timber.
Del Norte.....	115,200	Redwood.
Humboldt.....	460,800	Redwood, a little pine.
Mendocino.....	506,880	Redwood, a little pine.
Lake.....	92,160	Pine.
Sonoma.....	322,560	Redwood.
Marin.....	115,200	Redwood and pine.
Yolo.....		Scraggy oak.
Trinity.....		None surveyed.
San Mateo.....	115,200	Redwood.
Santa Clara.....	230,400	Redwood and pine.
Santa Cruz.....	230,400	Redwood.
San Benito.....	46,080	Pine and cedar.
Monterey.....	46,080	Redwood and pine.
San Luis Obispo.....	46,080	Redwood, pine, cedar.
San Diego.....	115,200	Pine.
San Bernardino.....	138,240	Pine.
Kern.....	92,160	Pine and cedar.
Tulare.....	92,160	Pine and cedar.

ACREAGE OF SURVEYED TIMBER LANDS IN CALIFORNIA—*Continued.*

COUNTY.	Acres of timber.	Kind of timber.
Inyo	57,600 Pine and cedar.
Fresno	115,200 Pine and cedar.
Mariposa	138,240 Pine and cedar.
Mono	115,200 Pine and cedar.
Alpine	115,200 Pine and cedar.
Tuolumne	69,120 Pine and cedar.
Calaveras	115,200 Pine and cedar.
Amador	57,600 Pine and cedar.
El Dorado	276,480 Pine and cedar.
Placer	230,400 Pine.
Yuba	92,160 Pine.
Nevada	529,920 Pine.
Sierra	184,320 Pine.
Colusa	23,040 Pine.
Tehama	138,240 Pine.
Butte	276,480 Pine.
Plumas	138,240 Pine.
Shasta	184,320 Pine.
Lassen	230,400 Pine.
Siskiyou	69,120 Pine.
Modoc	92,160 Pine.
Total	6,013,440	

The above represents only the number of acres of timber land actually surveyed at this time. In nearly every county there are large tracts yet to be surveyed and recorded. In many instances the lands surveyed merely border the streams which may be made available for lumbering purposes. There remains, at the least calculation, as much more timber land to be surveyed, giving as the total area of California forests over twelve millions of acres.

THE REDWOOD FORESTS.

The different kinds of timber are very regularly distributed. Along the coast are the great redwood forests, stretching from Del Norte County on the north to San Luis Obispo on the south. The redwood, or *Sequoia*, is found only in California. The *Sequoia Semper-virens*, or the redwood of commerce, is found on the mountains of the Coast Range, flourishing amid the fogs that bathe the counties bordering upon the sea. One vast forest from fifteen to thirty-five miles wide extends from the northern boundary of the State to Tomales Bay, and another begins at Belmont and extends southward. The *Sequoia Gigantea*, or Big Trees, extend along a large portion of the western flanks of the Sierra in disconnected groves. The fame of these giant trees has traveled over the world with that of the beauties of the Yosemite Valley and its water-falls.

PINE, FIR, AND CEDAR FORESTS.

In the interior the pine, fir, and cedar flourish. There are several varieties of pine, the most valuable being that called the sugar pine. This wood is considered better than the white pine of the East, and is shipped in considerable quantities to Australia, South America, Yokohama, Shanghai, Hongkong, and samples have recently been

sent by the Sierra Flume and Lumber Company to New York, in which city it is expected it can be sold for a less price than Eastern pine. Boards forty and forty-two inches wide are easily obtained, which fact calls to mind the time when it was easy to build a house in Maine that should contain no board less than a yard wide, and in which no knots could be found. The yellow pine has been introduced during the past year, by the company named above, and is now extensively used as flooring, inside work, and in all places where fine finish is desired. It has a smoother grain, and is stronger than redwood, and is said to take paint better.

California yellow and sugar pine is being shipped to foreign countries in competition with Eastern lumber of the same nature. The fir is found only in the more elevated regions of the Sierra. It is an odorless wood, and is now being used in manufacturing packing boxes for articles requiring an inodorous wood. In this respect it is superior to the white pine of the East. Spruce is also abundant out in the mountains, and is used for building timbers and flooring. It is harder than redwood, and lasts as long.

EXPORTATION OF CALIFORNIA FOREST TREE SEEDS FOR FOREIGN COUNTRIES.

The governments of several European countries begin to look to California to furnish them with trees with which to keep up their forests. Austria, Germany, England, New Zealand, and Australia are large purchasers of seeds for forest planting. It is estimated that over ten thousand dollars worth of seeds are annually exported from this State to foreign countries, and the demands for seeds of the best varieties of forest trees exceeds the supply. The favorite tree for forest culture seems to be the Oregon pine, or yellow fir. For ship-building this wood is considered as good as imported oak. A vessel built of this lumber eighteen years ago, at Eastport, was recently examined, and was found to be as sound as the day on which she was launched. California redwood is being planted extensively in Australia and New Zealand, and the German Government has recently sent to this city to obtain samples of California lumber with the seeds of various forest trees growing in the State.

LUMBERING IN CALIFORNIA AND THE EAST.

The business of lumbering is conducted in a different manner here from that of the East. This is necessitated by the difference in the physical formation of the country, which allows of large rivers only in the interior valleys, thus depriving the lumbermen of the streams by which their lumber could be brought down from the mountains and forests to places where it could be manufactured. In the East the season of cutting logs, or logging, as it is called, is the winter, when the snows in the forests permit the use of sleds, by which the logs are easily transported to the banks and the surface of frozen streams. Piled high on the ice they there remain until spring, when the high waters caused by the melting snow transport them to the mills below.

In this State there is little of this log-driving. The small streams along the coast and among the mountains will float a few logs down to the mills, but will not accommodate immense drives such as float

down Eastern rivers in the spring. Those mills which manufacture lumber cut on the coast are, for the most part, situated at the mouth of the small streams, and load their lumber directly into the vessels transporting it to its final destination. In the mountains the mills are, in many instances, situated in the forest where the lumber is cut, and the sawed lumber is conveyed to the valleys by means of immense flumes, built at great cost. In Washington Territory still another method of getting and moving lumber is in vogue. The trees grow so near to the waters of Puget Sound that the logs are rolled into the sea, and there formed in rafts, after which they are towed to some mill, where they are manufactured.

CALIFORNIA REDWOOD SAW MILLS.

The mills that cut redwood lumber extensively are located along the coast, in the neighborhood of the redwood forests. The following is a list of the redwood mills represented in this city, their situation, and yearly capacity in feet:

MILLS.	Location.	Capacity.
Evan's	Humboldt	8,000,000
Flannagan & Brossman	Humboldt	7,000,000
Vance Mills	Humboldt Bay	15,000,000
Harrington & Company	Humboldt Bay	10,000,000
Kentfield & Company	Humboldt	15,000,000
Dolbear & Carson	Humboldt	10,000,000
Occidental	Humboldt	9,000,000
Russ, Pickard & Company	Humboldt	9,000,000
Trinidad	Humboldt	10,000,000
Noyo	Mendocino	15,000,000
J. G. Jackson	Mendocino	8,000,000
Mendocino Lumber Company	Mendocino	15,000,000
Little River	Mendocino	4,000,000
J. & A. M. Cook	Mendocino	4,000,000
Navarro	Mendocino	8,000,000
Helm Kee	Mendocino	8,000,000
Dixon	Mendocino	3,500,000
Garcia	Mendocino	8,000,000
Walhalla	Mendocino	8,000,000
Sampson & Company	Mendocino	2,000,000
Salmon Creek	Sonoma	3,000,000

Total		220,500,000

These redwood mills have, therefore, the capacity for manufacturing two hundred and twenty million five hundred thousand feet of lumber each year, and other mills, not represented here, will undoubtedly carry the figures much higher. The mills in Mendocino, Humboldt, and Sonoma Counties are run by steam power almost exclusively, only five being supplied with water power.

LUMBER PRODUCTS OF EIGHTEEN HUNDRED AND SEVENTY-SIX.

The last report of the Surveyor-General gives the following figures for eighteen hundred and seventy-five and eighteen hundred and seventy-six: Adding to the figures for the year eighteen hundred and seventy-five, the production of the counties that were evidently omitted, estimating that production at thirty million feet, we have a total of three hundred and eighty-six million forty-five thousand three hundred and eighty-eight feet, which, compared with the production of the following year, shows a gain of over one hundred million feet for the year eighteen hundred and seventy-six. Of the mills running, one hundred and six are run by water power, the others by steam:

LUMBERING IN THE SIERRAS.

Lumbering among the Sierras is conducted in a novel way. As before stated, mills are built in the midst of the forest, and even in situations whence it would be almost impossible to transport logs to convenient places for sawing. But a safe, rapid, and cheap means of transportation was found in the V-shaped flumes that have been

built. The first flume built for this purpose was in Washington Territory. Next, a similar flume was built in Nevada, to transport cord wood to Virginia City. Next came the Antelope flume, in this State, terminating at Sessia, soon followed by one extending from the mountains to the headwaters of Butte Creek to Red Bluff, and by another extending from the headwaters of Chico Creek to within a few miles of Chico. The latter three flumes passed into the possession of the Sierra Flume and Lumber Company two years ago, and that corporation has extended and connected them so that they now form large arteries for the transportation of lumber to the shops of Red Bluff and Chico. The Chico flume is forty-five miles long, and carries lumber into the company's yard. Lumber placed in the head of the flume will be delivered at Chico in three and one-half hours. The cost of transportation in this way is reduced to about seventy-five cents per thousand feet. The flumes are constructed of plank thirty inches wide and sixteen feet long, nailed together at the sides. The trough thus formed is placed in brackets and a series of them forms the channel into which the waters of a stream are turned. Men are constantly employed watching the lumber as it comes down the flumes, in order to prevent "bunching," and a footwalk is built along the top of the flumes for their entire length. In some places the flumes run over trestle work one hundred or one hundred and fifty feet high; and in some cañons it may be seen fastened to the side of an almost perpendicular wall. The company above named own over one hundred and fifty miles of flume, and control a timber region bounded on the west by the Sacramento River, on the south by Butte Creek, on the east by the east branch of the south fork of the American River, and on the north by Battle Creek—fifty miles north and south, and eighty miles east and west. About Deer Creek and Big Meadows there are forty square miles of virgin timber land. By this system of flumes the lumbering business is brought to perfection. The whole system can be placed under the direct control of one man, and everything regulated by telegraph. If an order comes in to the office at Chico for a particular kind or size of lumber that is not in the yard, a telegram to the mills will set men at work getting out that particular kind, and in the course of four or five hours it will reach the yard.

HOW THE TREES ARE FELLED.

The trees in these timber regions give logs from sixty to sixty-two inches in diameter. The trees are not cut down with the ax, but are sawed through, and sometimes a tree remains standing after the trunk has been severed from the stump, and has to be wedged over. The immense logs furnished by these trees are with difficulty loaded upon the trucks, and in some instances tramways have to be built from the log to the truck before it can be loaded. The mills are furnished with gang-saws that cut up a whole log at once, circular saws, and all of the modern improvements in mill machinery. The nine mills of the Sierra Flume and Lumber Company produced last year: Of sugar pine, eighteen million six hundred and seventy-nine thousand nine hundred and four feet; mountain pine, fifteen million five hundred and fifty-six thousand nine hundred and seventy-one; spruce, six million two hundred and eighty-one thousand eight hundred and sixty-seven; fir, one million sixty-eight thousand one hun-

dred and ninety-four; total, forty-one million five hundred and eighty-six thousand nine hundred and thirty-six feet.

The other mills in the mountains cut an immense amount of lumber each year. The millions of feet that supply the mines of Nevada are cut in California, and there are many little mills that supply only local demands.

ANNUAL RECEIPTS OF LUMBER IN SAN FRANCISCO.

Only a portion of the lumber cut in the State finds its way to the San Francisco markets. The receipts of lumber in this market since eighteen hundred and seventy-two have been as follows:

1872 -----	236,868,900 feet.	1875 -----	306,324,198 feet.
1873 -----	203,329,441 feet.	1876 -----	304,165,857 feet.
1874 -----	253,250,564 feet.	1877 -----	275,776,094 feet.

The receipts for December of last year, included in the above statement, have been estimated at twenty million feet. This lumber embraces Puget Sound and Oregon pine, rough and dressed, fencing and pickets, and California spruce, cedar, maple, ash, redwood, etc., railroad ties, telegraph poles, and other timber. In eighteen hundred and seventy-two over six million railroad ties were received in this city, and six hundred and seventy-three thousand telegraph poles. In eighteen hundred and seventy-six only one hundred and eight thousand ties and one hundred and seventy-seven thousand six hundred and sixty-two poles were furnished. Oregon and Puget Sound pine is in greater demand than California redwood, and a much larger quantity is brought to market. But besides this lumber large quantities of shingles, laths, posts, piles, spars, knees, boards, etc., are received. We export lumber to Peru, Honolulu, Australia, Mexico, Tahiti, Chile, Apia, Central America, Siberia, Japan, Panama, Marquesas, British Columbia, and New Zealand. In eighteen hundred and seventy-six we exported ten million four hundred and ninety-six thousand feet of lumber to the above countries, besides shingles, poles, spokes, ties, etc., valued at two hundred and thirty-three thousand six hundred and seventy-four dollars. This does not include the large quantities shipped directly from the mills, which would raise the total to much larger figures, but only that lumber exported from this port.

The following is the schedule of prices adopted by the Pine Manufacturers' Association, December ninth, eighteen hundred and seventy-seven, per one thousand feet, for foreign shipment:

Rough, under forty feet -----	\$10 00
Rough, forty to fifty feet -----	11 00
Rough, clear -----	16 00
Rough, fifty to sixty feet -----	12 00
Rough, sixty feet and over, at special rates, not less than -----	12 00
Rough boards, fencing, and 1x3 and 1x4 -----	11 00
Flooring and stepping -----	17 00
Laths -----	2 00

For coastwise shipments (domestic ports):

Rough, under forty feet -----	\$10 00
Rough, forty to sixty feet -----	11 00
Rough, sixty feet and over -----	12 00
Flooring and stepping -----	17 00
Laths -----	2 00

For cargoes, or parts of cargoes, coming through the Golden Gate, to the trade or steam railroad companies, delivered at Oakland or San Francisco in vessels or lighters, and in any other part of the Bay of San Francisco from the vessel direct:

Rough, under forty feet	\$15 00
Rough, forty to sixty feet	16 00
Rough, sixty feet and over	18 00
Flooring and stepping, first quality	23 00
Flooring and stepping, second quality	18 00
Three-inch and four-inch, for street and wharf plank	14 00
Plank and scantling, twelve feet and under	14 00
Rough refuse	10 00
Laths	-----

For the trade, from the yards:

Rough, under forty feet	\$17 00
Rough, forty to sixty feet	18 00
Rough, sixty feet and over	21 00
Flooring and stepping, first quality	27 00
Flooring and stepping, second quality	22 00
Clear timber, ship plank, etc.	27 00
Three-inch and four-inch, for street and wharf plank	16 00
Plank and scantling, twelve feet and under	16 00
Rough refuse	12 00
Laths	-----

Value of exports for February:

Zephyros, Acajutla, nineteen thousand four hundred feet of lumber	\$339 00
Paloma, Tahiti, thirty-seven thousand feet of lumber, one hundred and fifty thousand shingles	827 00
Granada, Panama, two thousand feet of lumber	70 00
Granada, Mexico, one hundred and five feet of lumber, fifty shooks	29 50
South Carolina, Mexico, four thousand feet of lumber, thirty packages of shooks	124 00
South Carolina, Central America, one thousand feet of lumber	35 75
E. Schroeder, Mexico, twenty-one thousand and fifty-five feet of lumber, thirty thousand shingles	477 42
Teutonia, Mazatlan, thirty-five thousand six hundred and ninety-four feet of lumber, forty thousand shingles	886 38
W. H. Meyer, Honolulu, two thousand five hundred and seventy-nine feet of lumber, one hundred thousand shingles, three thousand posts	559 00
Hera, Honolulu, five thousand and nineteen feet of battens, six hundred and seventy thousand shingles	1,233 86
Wisteria, Adelaide, sixty-six thousand six hundred and seventy-eight feet of lumber, four hundred feet of pickets	1,708 00
Leon, Adelaide, one hundred and thirty-six thousand four hundred and forty feet of lumber	3,985 15
Australian, Australia, one hundred and ninety thousand five hundred and ninety-seven feet of lumber	5,465 00
Georgia, Panama, fifteen thousand five hundred feet of lumber	381 00
Georgia, Mexico, fifty-seven packages of shooks	40 00
Vladimir, Vladovostock, four thousand six hundred and one feet of lumber	112 00
Newbern, Guaymas, three thousand five hundred and fifty feet of lumber	176 24
Sovereign of the Seas, New York, one million shingles	2,500 00
St. Paul, Honolulu, ten thousand one hundred and fifty-two feet of lumber	1,143 55
Eureka, Honolulu, three hundred and twenty thousand feet of lumber	3,840 00
Percy Edward, Tahiti, eight thousand and eight feet of lumber	208 00
Percy Edward, Marquesas, twelve thousand and eighteen feet of lumber	175 00
Una, Honolulu, two hundred and seventy thousand feet of lumber	3,240 00
M. E. Hall, Central America, two thousand feet of lumber	54 00

Total, one million one hundred and sixty-two thousand three hundred and seventy-seven feet of lumber, one million nine hundred and ninety thousand shingles, eighty-seven packages and fifty shooks, three thousand posts, five thousand and nineteen feet of battens, and four hundred feet of pickets.----- \$27,609 85

FORAGE PLANTS.

BY C. H. DWINELLE, PH. B., BERKELEY, ALAMEDA COUNTY.

There is no subject of greater importance to the farmers of California than that of forage crops. The feeding of domestic animals must, with rare exceptions, form a very important feature in the rural economy of all countries where agriculture is carried on for any great length of time. Not only do these animals furnish us with food, clothing, and motive power, but they do it without impoverishing the soil to any great degree. Under proper management, with the aid of forage crops and animals to utilize them, poor soils may be made good, and good soils made better. Tracts of nearly pure sand have in this way been transformed into rich black soils.

To be sure, there are cases where sediment brought on by natural or artificial irrigation, can be relied upon to renew the soil. In other cases still mineral fertilizers will supply what is needed to maintain a succession of crops. As a rule, however, the successful cultivation of land, for a long term of years, must be accompanied by the raising of animals, of some kind, in considerable numbers.

THE VALUABLE ELEMENTS TAKEN FROM THE SOIL MUST BE REPLACED, should be one of the farmer's first rules. The disregard of this law has reduced to sterility some of the fairest portions of the earth. As notable examples of this bad result, we have some of the countries bordering on the Mediterranean, and in numerous cases the cotton and tobacco fields of the Southern States.

In many parts of our own favored State, the unwise persistence in raising crops for shipment has so reduced the fertility of the soil, that it scarcely returns a profit to the cultivator. It seems hard for our practical (?) farmers to admit, that if you draw repeatedly on your bank, and make no deposits, you will finally exhaust your account, and have your checks returned dishonored. Inventive genius may give us machines that will so reduce the expenses of farming that a very light crop will still pay. Summer fallowing, by storing a part of one year's moisture until the next, turning in a quantity of vegetable matter, and weathering the soil, may give fair crops for a time. The great fact remains, however, that if land is used for crops that are to be consumed elsewhere, and no return is made to it for the crops sent away, it must ultimately be exhausted.

The tobacco raiser sends to the markets of the world the choicest elements of his soil, to be scattered broadcast in ashes from the smoker's pipe or cigar. Land exhausted by this crop is very difficult to reclaim, but it can be brought back by intelligent mixed farming.

The robbing of the cotton lands is quite inexcusable, as it is the seed which makes the main draught upon it. If this is returned to the soil from which it came, instead of being allowed to rot where it is thrown as it comes from the gin, or being sold to those who have

intelligence enough to know its value, the actual wear on the soil of a cotton crop is very small.

In our own too exclusive grain growing, the land has been drawn upon for the elements of the grain itself, and, by the burning of the straw, cheated out of the vegetable mold which is so essential to continued fertility. This should be changed by having all of the present waste consumed by animals rather than by fire. Some would say that, from their experience, it would be more profitable to feed out a large part of the grain itself than to ship it. But if grazing is brought in as a method of saving the refuse of a grain farm, it will not be wise to rely upon that refuse alone to carry the stock through all parts of the year, good seasons and bad. Other crops, raised specially for forage, must be had, so that if one resource fail, another may be at hand. It will be found best also to change about the location of the various crops, whether for grain or forage. And in this way we shall have established a mixed husbandry, with rotation of crops. This is what has been found profitable elsewhere, and it is what has already been adopted by our most intelligent and successful farmers in this State. If a farmer has money ahead, in the bank, or out at interest, the chances are that he raises a variety of crops and believes in live stock. England went through this process of depletion until her average yield of grain was very low. By the introduction of the rotation of crops and the cultivation of a variety of the best grasses, clovers, and roots, to be fed to choice animals on the farm, the tide has been turned, and the average return raised immensely. The object has been to reduce the actual waste to the smallest possible quantity of those elements which the farmer can afford to buy, in mineral fertilizers. We, too, must study our resources in the way of mineral fertilizers, but not with the idea that they can take the place of vegetable mold.

Assuming, then, that forage crops are of importance to us, the question arises, which ones are the best? The answer will depend on a variety of circumstances. Soil, climate, and water supply will decide what can be grown with success. The product in view, and the taste of the animals to be fed, must influence the question of profit in a very important degree. Some plants are valuable in the pasture, but not profitable for curing. Others are at their best when cut and fed green. Some must be dried to be liked by cattle. Certain ones are valueless when others are to be had, but invaluable in times of scarcity.

CONSULT NATURE.

I am convinced that Nature has not been consulted as much as she should be in this matter. While I strongly favor the importation and trial of plants that have proved valuable in other countries, I believe that we may find plants, either indigenous or accidentally introduced, already growing about us with such vigor as to show their adaptability to the locality, and needing but little encouragement to become profitable forage crops. This summer I have been examining the grasses of Oakland Township, and find that there are several that deserve more than a passing notice.

RYE OR RAY GRASS, DARNEL.

There are here at least three species of the genus *Lolium*. The Italian rye or ray grass (*Lolium Italicum*), or at least a grass which answers its description, is widely distributed. It occurs on the foothills about the University buildings, and at many other places, down as far as the bay shore. It does particularly well on low adobe, or clay lands, that are very wet in winter. On the dry lands it makes but a moderate growth, though even there it is a valuable addition to the pasturage. On the low lands it tillers out wonderfully, particularly if grazed or cut off before going to seed. It often grows to a height of two or three feet, with beautiful heads from six inches to a foot long. The seeds are very numerous, and, when ripe, they seem to be very rich food. Horses, cattle, and fowls are very fond of the grass and its seeds. There is a large tract on each side of San Pablo Avenue, where it is the prevailing grass. In some spots, that have not been cultivated for several years, it has so completely taken possession that it would do to cut for seed. Without other irrigation than that of the rains of last winter, it has grown in places so as to be cut twice for hay, and there is now fair feed. Though the winter rains were very heavy, those of the spring have been so light as hardly to affect vegetation. This would indicate that the grass would do well on suitable soil, where irrigation in winter only is practicable. On dry ground, where undisturbed, the seed is now ripe, and the stalks brown. Where it was cut back, it is now, the latter part of July, as green as in April. I have, as yet, no definite information as to the introduction of this fine grass in this locality. One of our pioneer farmers tells me that he first noticed it on the San Pablo road in eighteen hundred and fifty-four, in front of land cultivated by a Belgian. Perhaps this European brought the seed with him intentionally, or by accident, in his packing boxes. The United States Patent Office distributed the seeds of the Italian rye grass all over the Union, more than twenty years ago, and we need not be surprised to find it in any place that has been long settled. I have myself observed it at Santa Cruz and Alviso, and Professor Hilgard reports it as abundant about San Rafael. It so closely resembles what, on this coast, is called "cheat," that many of our farmers have not noticed its advent in their midst. It is, however, a much finer and better grass, and no one who has once had the differences between the two pointed out should ever be cheated again.

The grass is no novelty in Europe. It has been cultivated there for a great while, probably for several centuries, and is a great favorite. On the irrigated plains of Italy it gives immense returns. It is largely used in soiling cattle. Perhaps it may yet prove a rival to our favorite alfalfa on some soils. The reclaimed salt marshes seem to be peculiarly suited to it. It is possible that the Italian rye grass is to hold the place in our agriculture that timothy does in New England. Mixed with alfalfa, it may prove a much better feed than either alone. Will not some of our irrigators try a small piece of alfalfa and Italian rye grass mixed? It might keep off the hoove, which so often attacks cattle feeding on alfalfa alone. In England this is the favorite grass for irrigated lands, particularly where sewage is used.

The New Zealand rye grass, of which Mr. Sneath spoke so favorably at the last annual meeting of the California Dairyman's Society,

is doubtless closely allied to, if not identical with, the Italian. His directions for sowing it are so good, for this and other fine seeds, that I take the liberty of copying them as they appeared in the Pacific Rural Press. The items as to its yield will also be read with interest by dairymen.

HOW IT OUGHT TO BE PLANTED.

The seed weighs about twenty pounds to the bushel and will give about one hundred seeds to the superficial foot when sown twenty pounds per acre. This is, perhaps, sufficient, although I have used thirty pounds. It should not be covered more than one-quarter of an inch deep, and therein I have found my greatest difficulty, but I believe I have discovered a plan by which I can seed it to a regular depth hereafter. I am building a light wooden roller four and a half feet by nine feet, with a round steel wire rake in front of it. This rake can be regulated by a spring attachment, and the teeth being only two inches apart, it will, I think, completely scarify the surface and cover the seed to any depth I may desire, while the roller, following, will press the covering firmly.

I do not think frost will affect this grass as seriously as it does alfalfa in its first growth; but as we have but little frost in our section I cannot speak of it with certainty. I prefer putting in the seed early, as the roots must be firmly set before the grass toughens and dries in summer, or else stock may pull it up roots and all, in loose soil especially.

Rye grass has been the leading grass in England for many years, and generally grown there upon low and marshy lands. The "Encyclopedia Britannica," under the head of agriculture, reports a cutting from a favored locality of eighty tons per acre per annum of grass (green weight) when fortified with liquid manure and a plentiful supply of water. It was cut just as the seed stems were pushing forward.

I now have grass from ten to fourteen inches high, that was cut thirty days ago, and this has been repeated all this summer.

The Italian rye grass is said to be a biennial, that is, lasting but two years, but unless cut very close it would probably resow itself, so as to last for a long time.

ENGLISH, OR PERENNIAL RYE GRASS.

The second kind of rye grass, which I have found spreading in this township, is the English or perennial (*Lolium perenne*). It is, in turn, more delicate in its structure than the Italian, and is considerably used for lawns. The stalks and leaves are finer, the spikelets smaller and less numerous, and the heads more drooping than in the Italian. From a limited acquaintance with it, I should say that it would give less forage, though of a finer quality, than the Italian rye grass. In seed it is decidedly inferior to the Italian. The latter is very heavy when ripe, and horses are eager for it.

The only piece of English rye grass that I have observed near here, as left to shift for itself, was very roughly put in several years ago. The rains were deficient that year, and the land is very foul with weeds. In spite of these drawbacks and close pasturing it has survived, and adds very much to the carrying capacity of the land. A specimen of this grass was lately sent to the editor of the Pacific Rural Press from Mare Island, with the statement that it had spread over considerable land there.

POISON DARNEL, OR CHEAT (?).

The third species of this genus, which I shall consider, is the darnel proper of the English farmer (*Lolium temulentum*). It has a variety of names, as bearded darnel, poison darnel, and wire grass, and has borne, to say the least, a doubtful character. The farmers of this coast have attached a new opprobrium to it by dubbing it

"cheat." It seems like robbing the devil of his due to take this name from the brome grass, chess (*Bromus secalinus*), which has borne it so long in England and the United States. This darnel has been known and written about for centuries, and has had the reputation of being poisonous. *Lolium*, in its old Latin name, and *temulentum* means *drunken*. It is very widely, we may say universally, spread over the grain lands of this coast. Unless a farmer takes great pains to clean his seed grain, he sows it with nearly every crop, and it is carried from place to place by the waters of every stream, and by birds and animals innumerable. Like the other grasses of this genus, mentioned above, it flourishes on a stiff soil with abundance of water. If the season is favorable to the growth of grain, that gets the start, and the darnel makes but little showing, though it may ripen and drop its seed for the next year. The use of the header is particularly favorable to the increase of this, and many another, weed which does not ordinarily attain the height of thrifty grain. Grazing off headed stubble with sheep, particularly Southdowns, helps very much in keeping the land clear of darnel, Napa thistles, etc.

When the winter is cold, and there are excessive rains, so that some of the grain rots in the ground, and the rest makes a stunted growth, the darnel stools out and takes its place. The field is then said to be "cheated," *i. e.*, the grain is supposed to be turned into darnel. Many people do not notice the difference between grain and darnel before they begin to throw up their stalks, consequently they are "cheated" with the hope of full crops when the ground is covered with darnel. A little study of the plants, side by side, will enable any one to distinguish between them, even in their early stages. The leaf of the darnel is narrower than that of wheat. It is very rich in silica, and the mature stems are stiff and harsh. The upper side of the leaf is finely corrugated, has rather a dull surface, and feels rough to the finger, drawn over it from the stem towards the opposite end. The under side is much smoother, and glistens in the sunlight. On a wet piece of ground its dark green is in strong contrast with the sickly wheat. The darnel is more erect in its growth, and the stools are not as spreading as in wheat.

It is very desirable that the question as to the evil results from eating this grass, and its seed, should be definitely settled. There is certainly a great deal of it in the hay raised about here, and I have never heard of any bad effects from it. Thinking that the poisonous qualities might be developed in the ripening of the grain, I wrote to Mr. E. T. Wall, of Santa Rosa, Sonoma County, who, I knew, raised it as a crop. In the course of his reply, he says: "As for cheat being poisonous, that is new to me; for I, in common with the majority of my neighbors, consider it the best hay we have. I have fed the threshed cheat grain to horses and hogs, and prefer it to any other grain. I have never noticed any of the symptoms you speak of among stock here, and I am satisfied it will produce no such effects."

This is, certainly, very strong testimony, not only as to the harmlessness of darnel, but as to its actual value as a field crop. I shall take every opportunity to obtain information on this point, by experiment and from the experience of others. It would be strange if it should prove, after all, that the only "cheat" about this grass is the "poison" in its name. If darnel is innocent, let it be relieved from the imputation of being "the only poisonous grass," and place it among the honored cereals. It is possible that darnel may be sub-

ject to the attacks of some fungus, like ergot in rye, and smut in Indian corn, which renders it unfit for food. It may be well to give the indictment against darnel, as already published in the transactions of your Society for eighteen hundred and sixty-four and sixty-five, in Professor H. N. Bolander's papers on grasses. It is as follows:

Haller affirms that this species of *Lolium* not only produces intoxication, as its trivial name implies, but that if baked into bread, or fermented in ale, its administration is attended with very disagreeable and even fatal effects. It produces headache, vertigo, vomiting, lethargy, drunkenness, and difficulty of speech, and the tongue exhibits a very strong trembling. Seager further remarks, that a trembling of the body is one of the most certain signs of poisoning by this plant. It also affects with blindness for several hours. By the Chinese laws—for this plant is found both in China and Japan—it is forbidden to be used in fermented liquors. Some of the intoxicating qualities of facitious beer are said to be owing to the admixture of darnel with the malted barley. According to Withering, horses, geese, etc., are killed by darnel, and dogs are particularly subject to its influences, mixed in small quantities in their food. It is, however, said to fatten chickens and hogs. In the Medical and Physical Journal there are placed on record several cases of poisoning, by darnel, in the human subject. In these, "giddiness in the head, pain, and swelling of the limbs, succeeded by abscess and gangrene, were the most prominent symptoms. One of the sufferers lost both his legs." (Burnett's Outline of Botany, p. 365, published 1865.) Geiger gives in his Pharmac. Botany, eighteen hundred and thirty-nine, an analysis of the grains made by Bley. According to this analysis its "effects are only slightly narcotic." I have known of but one instance that a farmer had observed some deleterious effects on cattle having been fed on this very grass.

If, after reading this, anyone feels a hankering for a loaf of darnel bread he can easily find the material for it. He should, however, make careful preparations for recording his sensations after eating it, and leave the notes in good shape for the benefit of his survivors. I should hardly recommend the introduction of poison darnel where it does not already grow. If, however, it gets the upper hand in a grain field after a wet winter, like the last, it is best to cut it in the milk, before it becomes too tough and wiry. By thus preventing it from ripening the land can be nearly cleared of it for some time.

The seeds of several kinds of rye grass can be had of most any regular seed dealer. The English farmers have names for a great many varieties of the perennial rye grass. All of the species of this genus (*Lolium*) seem to vary and sport in minor points. Sometimes this can be ascribed to change of location, but there are some things that seem to be independent of that. For instance, the head may be bearded or bald, the two forms growing on the same hand's breath of ground, and apparently from the same lot of seed. I have observed this in both Italian rye grass and darnel (*L. Italicum* and *L. Temulentum*.)

MEADOW SOFT GRASS—"MESQUITE." (?)

French—Houque laineuse—Foin de mouton. *German*—Wolliges Honig-gras.

This beautiful grass (*Holcus lanatus*) has been widely spread among the farmers of this coast, more particularly in our northern coast counties, and through Oregon and Washington Territory. I became familiar with it while living on the peaty lands of the San Joaquin delta. Mr. A. G. Kimbell gives me the following history of its introduction there:

In eighteen hundred and sixty-two I was in the seed store of Mr. Moore (pioneer seedsman of San Francisco), and he showed me some seed that he called 'mesquite grass' seed, and gave me a few seeds of the same to try on the tule lands. I sowed the seed on Middle River, and the grass grew and flourished well. As I had no reclaimed land then to cultivate, it was of no value to me, and I paid but little attention to it. Some twelve or fifteen years ago I met in San Francisco the Honorable J. M. Hudspeth, of Sonoma County, and spoke to him about my trial

of the mesquite grass on the tules. I suggested to him that, as he lived near the sea coast, I thought he could make it profitable in his section of country, and gave him about a table-spoonful of the seed. That he planted on his place, and succeeded so well that the grass became very popular, and he could not at first supply the demand for seed at one dollar per pound. This grass grows two and one-half to three feet high here, and seeds in May; and before the seed stems are dry, the young shoots are springing up from the roots. When not cut for hay or grazed, it will seed the second time before frost.

On the low lands in question it attracts attention on account of its peculiar light green tint, and also from the fact that frost does not injure it. During the winter months, when the rank swamp growth and most of the introduced grasses and clovers are blackened and worthless as forage, a patch of meadow soft grass stands out in relief, like an oasis in a desert.

As with the rye grasses, the more you trample on it, the deeper it sends its roots, and the more it tillers. This, of course, is a very valuable trait in pasture grasses. This species grows in bunches, if not very thickly sown. Its name of soft grass, or velvet grass, is given on account of the texture of the foliage, which is covered with very fine, soft hairs. In this State it sometimes grows to a height of six feet, but from two to three feet is more common for the seed stalks. The color of the heads or panicles varies from light green to a decided purple. On account of the down upon it, cattle do not seem to like it at first, and will avoid it if more palatable grasses are at hand. When other feed is cut off by frost or drought, they take very kindly to the soft grass, and thrive upon it.

I make the following extracts from a letter kindly written to me by Mr. J. M. Hudspeth, of Sebastopol, Sonoma County, who received his seed from Mr. Kimbell:

I have been growing the grass mentioned since eighteen hundred and sixty-five, and have found it well adapted to the coast counties. It grows well on all moist land, regardless of soil. I say this because we have here in this vicinity some 'honeysuckle land' that produces no grass of any kind, but the mesquite will grow on such places six feet high, producing a large crop. It grows from the root. I have had some in pasture for eight or nine years without reseeding. It makes a light hay, and stock do not seem to like it until they have used it a while. I think it is very nutritious. It is esteemed very much by the milk ranchers here, to give green feed in the latter part of the season. Stock prefer it green to dry. I do not think it will do on dry upland. I think it best to sow alone. It does not matter much whether the land is plowed or not for it, so that the seed is covered. It should always be sown early.

The merits of this grass have been very thoroughly discussed in the Oregon papers within the last few months, and there seems to be a considerable diversity of opinion about it. The estimate set upon it seems to vary with the soil and climate, and the mode of utilizing it on each farm. Its main virtues seem to be: that it will battle successfully with fern on its own ground; very wet and frosty weather does not injure it; the close cropping of sheep does not kill it out, as it does timothy and some other grasses. (The French call it "sheep grass," *foin de mouton*.) On the other hand, some say that it is only second rate as a butter grass, and is superseding better kinds. It is also said to be very hard to eradicate when it is once established.

There are one or two points, brought out in the newspaper articles, which suggest that the Oregonians may have two grasses, closely allied forms, under the name of "mesquite." These are, the wide range of opinion as to its value, and the statement that the grass has running roots. Now, in Europe, besides the meadow soft grass (*Holcus lanatus*), classed as about a second rate grass, there is the creeping soft grass, *houque molle* of the French (*Holcus mollis*), set down as very

poor, and not to be encouraged where better grasses will grow. The latter has a creeping root. Chamber's Encyclopædia says of it: "The roots sometimes extend five or six feet in a season. They contain much nutritive matter, and are a very acceptable food to horses and cattle, but especially to hogs, which grub them up." I hope to get specimens from Oregon that will enable me to settle this matter. While the meadow soft grass may not make hay of the very first quality, it certainly deserves a trial, where a sod is wanted, and other grasses will not flourish, on the peaty lands along our rivers, in our mountain valleys, and in the fog belt of the northern coast.

WHAT IS MESQUITE?

A great deal of good ink and paper has been spoiled in arguing this question. According to Webster's Dictionary, this is "supposed to be a word of Indian origin." "The natives make it a word of three syllables, as mes-kē'-tā." It is the name of a shrub, or small tree, which grows in Texas, and from there south and westward. I believe it is found in the southeastern part of this State. The pods and beans of the tree are excellent forage. In Texas, there are certain fine grasses which grow habitually under and about the mesquite tree, and to distinguish them from the coarser "sage grass," and on account of their situation, they are called "mesquite grasses." The name may have at one time designated a single species, now it is applied to about a dozen grasses in Texas, belonging to several genera, and is about as definite as the term "corn," as used in Scripture, or by an old English farmer. There is no reason why meadow soft grass, which probably is not indigenous to Texas, should give up its time-honored name in favor of an indefinite barbarism. I have been told by Texans that they had never seen meadow soft grass in that State, though they were familiar with various forms of mesquite grass. On the other hand, one of the Oregon mesquite raisers says that his seed came direct from San Antonio, Texas, and was said to be native there. If his is *Holcus lanatus*, we have but to call attention again to the fact that the United States Government has for more than twenty years been distributing seeds all over the continent, to say nothing of private importations, and it is not surprising to find European grasses growing everywhere.

The whole controversy shows plainly the value of definite scientific names and descriptions. It is to be hoped that in the near future a greater proportion of our young farmers will avail themselves of the opportunities offered them, free, by our University of California. The intimate acquaintance with nature and her laws, which is cultivated in the College of Agriculture, must be an advantage in any future struggle with her, besides being a life-long source of pleasure. It certainly cannot make a man less practical to know a choice grass from a weed, a friend from a foe, in the insect world.

Those grasses on which I have written are such as I am personally acquainted with. There are many that deserve favorable notice if time would permit. Before closing I will mention, if only briefly, some of the other forage plants which have been tried in our State and approved, and some which deserve trial on account of their record elsewhere. That giant of grasses, Indian corn, is almost as generally sown for fodder as in New England, but sorghum and imphee are crowding it in popular favor, on account of smaller

stalks and sweeter juice, and an after-growth when cut green. Egyptian corn, doura, comes in and claims all the advantages of the last and the heaviest yield of grain of any cereal. These are all approved by farmers of standing.

LEGUMES.

The great pulse family (*Leguminosæ*) deserves our special thanks for its many choice gifts. They are of great value in maintaining and renewing fertility. Some of its members, as bur-clover (*Medicago denticulate*) and alfalfa (*Medicago sativa*), have enriched many in this State. The "cow-pea" of the Southern States should be tried. It is noted as forage, and to plow in green as a fertilizer.

PREVENTIVE OF HOOVE.

It is said that if, before turning cattle out to pasture on peas, clover, etc., they are fed moderately, with something else, with a large dose of salt on the feed, and then watered, there is no danger of hoove.

The carob tree (*Ceratonia siliqua* L.) is another of the *leguminosæ* that deserved especial attention. Its natural home, in the countries about the Mediterranean, has just such a climate as that of California. As far back as history goes, its pods have been used as fodder for horses, cattle, and swine. The pods are from six to ten inches long, and about one wide, and contain, besides the seed, a sweet pulp that is relished even by man. It is said that ship-loads of them are sent from Palestine to Constantinople, and that they are sometimes found in the fruit shops of London, under the name of "St. John's Bread." They are sometimes ground, and a sort of molasses expressed, which is used in making sweetmeats. The tree is of good size, with ever-green foliage, and will grow in almost any soil. The yield of a mature tree is given at from half a ton to more than a ton of the pods. In the southern part of Spain the blossoms appear twice each year, in February and September, and are both times followed by the fruit. For planting by the roadside, and on rough ground, there are few trees that would be likely to prove more profitable, giving shade, forage, food for man, and ultimately wood. It is closely allied to the mesquite tree, but is larger in every way and bears better fruit. About seven years ago I called public attention to this tree as a very valuable one for introduction here.

Since that time there have been several importations of so-called "carob beans," but most of them have been from the mesquite and its allies in Mexico. In Spain the name for the genuine tree is Algarrobo (from the Moorish for the "carob"), and the Spanish invaders applied it to its nearest relative which they found in the new world. With this new application its spelling has been changed to Algoroba.

Mr. Charles H. Shinn, of Niles, in this county, claims to have the true carob growing in his nursery. He bought his seed from a respectable seed dealer in the east, and kindly gives me the following directions for starting them. They will probably be found equally good for locust and other similar seeds that germinate with difficulty: "Pour scalding water over the seeds, and when cold add a spoonful of spirits of camphor. Let the water stand on the seeds for five hours."

ROOTS, ETC.

Mangolds, sugar beets, carrots, pumpkins, and squashes are all approved forage, though it is said that the seeds of the two latter sometimes produce bad effects on cattle and poultry. They are among the few crops that can safely be counted upon to pay the rental now asked for land in this neighborhood.

And now, the short time given me in which to write on forage crops is exhausted; such is far from being the case with the subject in hand. That cannot be worn out while grass grows and water runs, or while there is need of "milk for babes and strong meat for men." Perhaps I may pursue the subject further in the future. I hope that others may give it the study which it deserves.

BERKELEY, CALIFORNIA, July 30th, 1878.

TENTH ANNUAL REPORT

OF THE

INSURANCE COMMISSIONER

OF THE

STATE OF CALIFORNIA.

YEAR ENDING DECEMBER 31, 1877.

SACRAMENTO:

STATE OFFICE : : : F. P. THOMPSON, SUPT. STATE PRINTING.

1878.

PRELIMINARY.

Tenth Annual Report of the California Insurance Commissioner.

OFFICE OF INSURANCE COMMISSIONER, }
SAN FRANCISCO, February 20th, 1878. }

To his Excellency, Wm. Irwin, Governor of California:

I have the honor to present the following, as showing the amount of fire and marine insurance done in the State during the year ending on the thirty-first day of December, eighteen hundred and seventy-seven, together with the names and localities of the several companies transacting the business. A report as to the condition of the several companies doing business in the State must await the receipt of the companies' statements, many of them not yet due at this office:

FIRE INSURANCE.		
Amount written		\$256,893,278 42
Amount of premiums received		3,933,920 62
Amount of losses paid		1,219,900 98
MARINE INSURANCE.		
Amount written		\$79,813,667 00
Amount of premiums received		1,556,125 17
Amount of losses paid—as far as reported		456,709 52
TOTAL FIRE AND MARINE.		
Amount written		\$336,706,945 42
Amount of premiums received		5,489,045 79
Amount of losses paid—as far as reported		1,676,610 50

Apportioned as follows:

TO COMPANIES OF THIS STATE—FIRE INSURANCE.		
Amount written		\$78,827,937 00
Amount of premiums received		1,160,326 41
Amount of losses paid		364,758 75
MARINE INSURANCE.		
Amount written		\$18,904,669 00
Amount of premiums received		498,427 86
Amount of losses paid		291,114 85
TO COMPANIES OF OTHER STATES—FIRE INSURANCE.		
Amount written		\$52,371,543 34
Amount of premiums received		928,985 29
Amount of losses paid		266,307 04
MARINE INSURANCE.		
Amount written		\$728,646 00
Amount of premiums received		13,920 54
Amount of losses paid		14,486 70

TO COMPANIES OF FOREIGN COUNTRIES—FIRE INSURANCE.

Amount written	\$125,693,798 08
Amount of premiums received	1,844,608 92
Amount of losses paid	588,835 19

MARINE INSURANCE.

Amount written	\$60,180,352 00
Amount of premiums received	1,043,776 77
Amount of losses paid—as far as reported	151,107 97

Since the date of my last annual report, the following named insurance companies have been admitted to business in this State, to wit:

Commonwealth	Boston.
Eliot	Boston.
Farragut	New York.
Globe Marine	London.
North German Fire	Hamburg.
Northwestern National	Milwaukee.
Norwich Union	Norwich, England.
On Tai—Marine	Hongkong.
South British—Fire and Marine	Auckland, New Zealand.
Trade	Camden, N. J.
The Insurance Company of the State of Pennsylvania	Philadelphia.
The Marine	London.
Universal Marine	London.
Washington Fire and Marine	Boston.

And the following named have ceased to do business in the State, to wit:

Arctic	New York.
Atlas	Hartford.
Citizens'	Newark.
Citizens'	St. Louis.
Franklin	Indianapolis.
Merchants'	Newark.
Mississippi Valley	Memphis.
Patterson	Patterson, N. J.

The whole number of property insurance companies authorized to transact insurance business in this State, at the date hereof, being:

Fire and fire marine	88
Marine	18
Total	106

Classified as to localities of organization, as follows:

California	7	New Jersey	4
Connecticut	6	New York	16
Canada	3	New Zealand	2
China	5	Ohio	2
France	1	Pennsylvania	7
Great Britain	21	Rhode Island	4
Germany	6	Sweden	1
Illinois	1	Switzerland	5
Louisiana	1	Texas	1
Missouri	5	Wisconsin	1
Massachusetts	6		
Minnesota	1	Total	106

All of which is respectfully submitted.

J. W. FOARD, Insurance Commissioner.

TABLE NO. 1--LOCAL BUSINESS.

Showing the fire business of the California Insurance Companies for the year 1877.

NAMES.	Location -----	FIRE.				
		Risks written -----	Premiums received -----	Losses paid -----	Ratio of losses to amount written -----	Ratio of losses to premiums received -----
California	San Francisco -----	\$6,716,984 00	\$99,870 41	\$24,213 22	.36	24.2
California Farmers' Mutual	San Francisco -----	7,037,924 00	142,861 87	92,895 23	1.03	51.0
Commercial	San Francisco -----	7,228,767 00	108,087 18	31,564 29	.43	29.2

REPORT.

OFFICE OF INSURANCE COMMISSIONER,
SAN FRANCISCO, June 29th, 1878. }

To his Excellency, William Irwin, Governor of California:

Herewith I have the honor of submitting the tenth annual report of this department, showing in detail the condition and business of the several California insurance companies; and, in tabulated form, that of the fire, fire-marine, and life insurance companies of other States and foreign countries doing business in this State during the year ending December thirty-first, eighteen hundred and seventy-seven.

Below is given an itemized statement of the receipts and expenditures of this office for the year eighteen hundred and seventy-seven. (See Table 56):

RECEIPTS.

Regular fees for filing papers.....	\$3,505 00
Fees under retaliatory law.....	8,931 91
Miscellaneous fees	78 30
Total	<u>\$12,515 21</u>

EXPENDITURES.

Balance from previous year.....	\$4,734 84
Salaries.....	4,800 00
Office rent.....	900 00
Janitor.....	303 50
Blanks, stationery, and postage.....	354 90
Fuel.....	61 25
Commissioner's traveling expenses.....	190 00
Furniture.....	292 00
Advertising.....	114 60
Valuation tables.....	62 50
Incidentals.....	135 30
Balance.....	566 32
Total	<u>\$12,515 21</u>

All of which is respectfully submitted.

J. C. MAYNARD, Insurance Commissioner.

ANNUAL STATEMENTS.

CALIFORNIA INSURANCE COMPANY.

LOCATED AT SAN FRANCISCO.

C. T. HOPKINS, President.

ZENAS CROWELL, Secretary.

I certify the foregoing to be a full, true, and correct statement of the receipts of the Insurance Department of the State of California for the year eighteen hundred and seventy-seven, to the best of my knowledge and belief, as taken from the books of the department.

J. C. MAYNARD,
Insurance Commissioner.

Subscribed and sworn to before me this twelfth day of July, eighteen hundred and seventy-eight.

[SEAL.]

CHARLES E. KELLY,
Notary Public.

OFFICERS OF THE BOARD:

ROBERT BECK, *Secretary*-----Sacramento.

L. A. UPSON, *Treasurer*-----Sacramento.

CONSTITUTION

OF THE

CALIFORNIA STATE AGRICULTURAL SOCIETY.

ARTICLE I.—NAME.

SECTION 1. This Society shall be called "The California State Agricultural Society."

ARTICLE II.—OBJECT.

SECTION 1. It shall be the object of this Society to encourage the cultivation of the soil, and the general development of all the agricultural resources of this State.

SEC. 2. To foster every branch of mechanical and household arts calculated to increase the happiness of home life.

SEC. 3. To extend and facilitate the various branches of mining and mining interest.

ARTICLE III.—MEMBERSHIP.

SECTION 1. *Annual Members.*—Any person who has, during the year eighteen hundred and sixty-five, or who shall, during this year, or any subsequent one, pay into the funds of this Society the sum of five dollars, may become a member of the same; such membership to expire on the thirty-first day of the following December.

SEC. 2. *Life Members.*—Any person may become a member for life by the payment of fifty dollars; or, if already a member, by the payment of forty dollars, and shall thereafter be exempt from all dues and assessments.

SEC. 3. *Honorary and Corresponding Members.*—Any person whom the Board shall propose may be elected an honorary or corresponding member, and shall enjoy, free of charge, all the privileges of the Society, except voting and holding office.

SEC. 4. *Privileges of Members.*—Any citizen of this State, being a member of this Society, shall be eligible to office, entitled to vote, and enjoy the free use of the library, under the rules of the same, and have free admission, accompanied by his wife and minor children, to all the exhibitions of the Society, and shall be permitted to compete for premiums in any or all departments.

SEC. 5. *Expulsion of Members.*—Any member who shall present for exhibition any article or animal which he is not entitled by the rules of the Society to exhibit, or who shall attempt to deceive, or be guilty of a breach of good faith toward the Society, may be expelled by a vote of two-thirds of the members present at any meeting of the Society; *provided, always*, that no member shall be expelled unless written notice of the alleged offense shall have been served on him, or left at his usual place of residence at least twenty days previous to the action.

ARTICLE IV.—OFFICERS.

SECTION 1. The officers of this Society shall consist of a President and nine Directors, who shall constitute a State Board of Agriculture, five of whom shall constitute a quorum. They shall elect a Treasurer and Secretary, not members of the Board. They may also appoint, annually, as officers of the Board, a chemist, a botanist, a meteorologist, a geologist, a metallurgist, an ornithologist, and an entomologist, and define the duties of each. They may appoint such committees on the various departments of agriculture, mining, and manufactures, either generally, or for specific purposes, as they may deem important for the best interests of the State, and require such committees to report the results of their investigations to the Board at such times as may be named by them.

SEC. 2. *Duties of President.*—The President shall preside at all meetings of the Board, and of the Society; shall have power to call special meetings of the Board when necessary, and at the written request of ten members may call extra meetings of the Society; shall appoint all meetings not otherwise provided for; shall vote only at the election of officers, and in case of a tie; and shall sign all financial and official documents emanating from the Society, and not otherwise provided for. In the absence of the President from any meeting of the Board or

Society, any Director may be called to the chair, and during such meeting, and for the completion of any business transacted, or ordered at the same, shall have the same powers as the President.

SEC. 3. *Duties of Secretary.*—The Secretary shall conduct the correspondence of the Society, keeping in a separate book copies of all letters written in the name or on behalf of the Society, holding the same free to the inspection of any member of the Society, at any regular meeting of the same. He shall also receive and file all letters addressed to the Society, holding the same subject to the Board of Directors. He shall attend all meetings of the Society and the Board, keeping a full record of the doings of each in a separate book, and shall furnish a copy of the proceedings of each meeting to the Committee on Publication within five days after the close of such meeting. He shall prepare and publish all notices of meetings, shall keep a roll of all standing committees, and call the same (noticing absences) whenever desired to do so by the Chair; shall sign all certificates of honorary and corresponding memberships, and forward the same to those entitled to receive them. He shall keep, in a book prepared for that especial purpose, the name and address of every member; shall prepare and sign all gratuitous or complimentary cards or tickets of admission; shall countersign all diplomas, certificates of merit, etc. awarded by the Society, and forward the same to their respective claimants. He shall be ex officio Librarian; shall keep the seal, and all the plates, dies, engravings, etc., belonging to the Society, and shall cause to be struck therefrom such medals and impressions as may, from time to time, be required. He shall have charge of all specimens, models, plants, seeds, books, etc., and arrange, prepare, or distribute the same under the direction of the Board. He shall prepare all reports to be made by the Board to the Society, and all reports to be made by the Society to the State. He shall receive all moneys due or payable to the Society, and pay the same to the Treasurer, taking his receipt therefor; shall hold all bonds filed by officers of the Society for the faithful performance of their duty, and all vouchers for every class of expenditure. He shall countersign all drafts ordered by the Board, and all certificates of annual and life membership, and keep an account of the same in a separate book, as they are issued, and shall, in December of each year, prepare a tabular statement of the receipts and expenditures of the Society, according to the law incorporating the same. For which services he shall receive such compensation as the Board shall decide to pay.

SEC. 4. *Duties of the Treasurer.*—The Treasurer shall receipt for all funds at the hands of the Secretary, and shall disburse the same only on the order of the Board, attested by the President and the Secretary. He shall also hold in trust all certificates of stock, bonds, notes, deeds, or other evidences of debt or possession belonging to the Society, and shall transfer, invest, or dispose of the same only by direction of the Society, or by a written order of the Board. He shall, within ten days after his election, file with the Secretary a bond for the faithful performance of his duties; said bond to be approved by the Board, and to be in a sum equal to twice the combined amounts of the funds on hand and the estimated revenue for the year; and shall, at the annual meeting, make to the Society a detailed report of all his doings; for which services he shall receive such compensation as the Board shall, from time to time, decide to pay.

SEC. 5. *Duties of the Board.*—The Board of Managers shall have the general and financial management of all the affairs of the Society in the interim of annual meetings. It shall fill all vacancies occurring between elections, and shall make the necessary preparations and arrangements for all meetings, fairs, exhibitions, etc. The Board shall also have power to make its own by-laws (not inconsistent with this Constitution), and arrange the time and place of its own meeting.

ARTICLE V.—STANDING COMMITTEES.

SECTION 1. *Committee of Finance.*—The Committee of Finance shall consist of three (the President and Secretary being two), whose duty it shall be to audit the Treasurer's account, to examine and approve all bills before they are paid, to have general supervision of the finances of the Society, and to report their doings in full to the Board whenever called on so to do.

SEC. 2. *Library Committee.*—The Library Committee shall consist of three (the Secretary being one), whose duty it shall be to have the general supervision of the library and cabinet, to make all necessary rules and regulations for the government of the same (said rules and regulations being subject to the approval of the Board), to suggest such means for the safe-keeping and enlargement of both the library and cabinet as they may deem expedient, and to make a full report of their doings, together with the state of the department under their charge, at each annual meeting.

SEC. 3. *Visiting Committee.*—The Visiting Committee shall consist of three, whose duty it shall be to visit and examine all farms, orchards, vineyards, nurseries, field crops, mining claims, ditches, mills, etc., which may be entered for competition, and which shall require examination at other times and places than the annual fair; to award premiums for the same according to the schedule, and recommend such gratuities as they may deem proper, and make a full report to the Board at least one day previous to the annual meeting.

SEC. 4. *Committee on Publication.*—The Committee on Publication shall consist of three (the President and Secretary being two), whose duty it shall be to contract for and superintend, under the direction of the Board, all printing and publishing necessary for the prosperity of the Society.

ARTICLE VI.—DONATIONS AND BEQUESTS.

SECTION 1. All donations, bequests, and legacies to this Society, designated by the donors for any particular purpose embraced within the objects of the Society, shall be with strict fidelity so applied; and the name of each donor, together with the amount and description of such donation, and the object for which it was designated, shall be registered in a book kept expressly for that purpose.

ARTICLE VII.—MEETINGS AND EXHIBITIONS.

SECTION 1. *Exhibitions.*—The Society shall hold an annual fair and cattle show in the City of Sacramento, and may, at its discretion, hold such other exhibitions as it may deem conducive to the interests of agriculture.

SEC. 2. *Annual Meeting.*—The annual meeting shall be held at the Capital of the State, at such time during the month of January in each year as the Board may designate, at which time all the officers from whom reports of the preceding year's service are required shall present the same, and all officers for the ensuing year shall be elected by ballot; and all officers shall continue in office until their successors are duly qualified.

SEC. 3. *Special Meetings, how called.*—No special meeting of the Society shall be called but upon thirty days' notice in the columns of a newspaper published in each of the Cities of San Francisco, Sacramento, Marysville, and Stockton; nor without a request signed by at least ten members.

SEC. 4. *Proxy Voting.*—It shall not be admissible for any member to vote by proxy in any meeting of this Society, or its Board of Managers.

SEC. 5. *Quorum of the Society.*—At any meeting of this Society, fifteen members (a majority of whom shall represent counties other than the one where the meeting shall be held) shall constitute a quorum.

ARTICLE IX.—OFFICE AND ROOMS.

SECTION 1. The office, rooms, library, and cabinet of the Society shall be permanently located at the Capital of the State.

ARTICLE X.—AMENDMENTS.

SECTION 1. Amendments to this Constitution must be presented in writing at an annual meeting, when, if unanimously agreed to, they shall be adopted; but if there be objection, and a majority consent thereto, they shall be spread upon the minutes and lie over until the next annual meeting, when they shall be read, and if, after due discussion, two-thirds of all the members present vote for the amendments, they shall be adopted and become a part and parcel of this Constitution.

ARTICLE XI.—EFFECT.

SECTION 1. This Constitution shall take effect from and after its passage.

I certify the foregoing to be a true copy of the Constitution of the California State Agricultural Society, as amended by unanimous consent at the annual meeting of the Society, held on the twenty-eighth day of January, A. D. eighteen hundred and sixty-nine.

ROBERT BECK, Corresponding Secretary.

A COMPILATION

OF ALL THE LAWS NOW IN FORCE RELATING TO OR AFFECTING THE STATE
AGRICULTURAL SOCIETY.

AN ACT

TO INCORPORATE A STATE AGRICULTURAL SOCIETY AND APPROPRIATE MONEY
FOR ITS SUPPORT.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. There is hereby established and incorporated a Society to be known and designated by the name and style of the "CALIFORNIA STATE AGRICULTURAL SOCIETY," and by that name and style shall have perpetual succession, and shall have power to contract and be contracted with, to sue and be sued, and shall have authority to have and use a common seal, to make, ordain, and establish, and put in execution such by-laws, ordinances, rules, and regulations as shall be necessary for the good government of said Society, and the prudent and efficient management of its affairs; *provided*, that said laws, ordinances, rules, and regulations shall not be contrary to any provision of this charter, nor the laws and Constitution of this State or of the United States.

SEC. 2. In addition to the powers above enumerated, the Society shall, by its name aforesaid, have power to purchase and hold any quantity of land not exceeding four sections, and may sell and dispose of the same at pleasure. The said real estate shall be held by said Society for the sole purpose of establishing a model experimental farm or farms, erecting inclosures, buildings, and other improvements calculated and designed for the meeting of the Society, and for an exhibition of the various breeds of horses, cattle, mules, and other stock, and of agricultural, mechanical, and domestic manufactures and productions, and for no other purposes.

And be it further enacted, That if, from any cause, said Society shall ever be dissolved, or fail to meet within the period of two consecutive years, then the real estate held by it, together with all the buildings and appurtenances belonging to said estate, shall be sold as lands are now sold by execution, and the proceeds deposited in the State treasury, subject to the control of the Legislature.

AN ACT

SUPPLEMENTAL TO AN ACT TO INCORPORATE A STATE AGRICULTURAL SOCIETY,
APPROVED MAY THIRTEENTH, EIGHTEEN HUNDRED AND FIFTY-FOUR, AND
AMENDED MARCH TWENTIETH, EIGHTEEN HUNDRED AND FIFTY-EIGHT.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. The general prudential and financial affairs of the Society shall be intrusted to a Board of Agriculture, to consist of a President and nine Directors, five of whom shall constitute a quorum.

SEC. 2. Said Board of Agriculture shall be elected at a general State Agricultural Convention, to be held at the Capital of the State, in the year eighteen hundred and sixty-three, in the month of March, and in the month of January every year thereafter, to consist of the life members and annual members of the State Agricultural Society and four delegates from each County Agricultural Society within this State, incorporated under the general laws of this State for such corporations, and an equal number from each District Agricultural Society, also incorporated under the general laws of this State for such purposes; said delegates to be chosen at the annual fair or annual meeting of each such Society next preceding the State Agricultural Convention; *provided*, said convention to be held in March, in the year eighteen hundred and sixty-three, may admit any person or persons representing any of said County or District Agricultural

Societies, as the convention may determine by a majority vote, whether such persons shall have been elected by their respective County or District Societies, as provided in this Act or not.—
[Amended section.]

SEC. 3. The Board of Agriculture shall, at its first meeting after its election, be divided by lot into three equal portions (omitting the President), one portion to continue in office one year, one portion two years, and one portion three years; one-third of the number, together with the President, to be elected at the State Agricultural Convention annually thereafter; the Directors to hold office three years.

SEC. 4. The Board of Agriculture may, in the absence of the President, choose one of its other members temporary Chairman. They shall elect a Treasurer and Secretary, not members of the Board, prescribe their duties, fix their pay; and the said Treasurer and Secretary shall be subject to removal at any time by a majority of said Board.

SEC. 5. The Board of Agriculture shall use all suitable means to collect and diffuse all classes of information calculated to aid in the development of the agricultural, stock raising, mineral, mechanical, and manufacturing resources of the State; shall hold an annual exhibition of the industry and products of the State; and, on or before the first day of January of each year in which the Legislature shall be in regular session, they shall furnish to the Governor a full and detailed account of all its transactions, including all the facts elicited, statistics collected, and information gained on the subject for which it exists; and also a distinct financial account of all funds received, from whatever source, and of every expenditure, for whatever purpose, together with such suggestions as experience and good policy shall dictate for the advancement of the best interests of the State; the said reports to be treated as other State documents are.

SEC. 6. The Board of Agriculture shall have power to appoint a suitable number of persons to act as Marshals, who shall be, from twelve o'clock noon of the day previous to the opening of the exhibition, until noon of the day after the close of the same, vested with all the powers and prerogatives with which Constables are invested, so far as acts or offenses committed within, or with reference to, or in connection with, the exhibition are concerned.

SEC. 7. The Board of Agriculture may, in its discretion, award premiums for the best cultivated farms, orchards, vineyards, gardens, etc.; *provided*, that said Board shall not audit, allow, or pay any amount exceeding one thousand dollars, in any one year, for traveling expenses of Visiting Committees in examining said farms, etc.; *provided further*, that no person, except practical agriculturists, shall be appointed on said committees.

SEC. 8. It shall be optional with any to whom a premium is awarded to receive the article named, or its equivalent (as affixed) in coin.

SEC. 9. The State Agricultural Society shall have power, at its first annual meeting after the passage of this Act, to make such alterations in its Constitution as shall make it conform to the provisions of this Act.

SEC. 10. All Acts or provisions in conflict with the provisions of this Act are hereby repealed.

SEC. 11. This Act shall take effect from and after its passage.

AN ACT

FOR THE ENCOURAGEMENT OF AGRICULTURE AND OTHER INDUSTRIES, APPROVED MARCH TWENTY-FIRST, EIGHTEEN HUNDRED AND SEVENTY-TWO.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. There is hereby appropriated, out of any money in the treasury not otherwise appropriated, the sum of five thousand dollars for the State Agricultural Society; the sum of three thousand dollars for the Bay District Agricultural Society; the sum of two thousand dollars for each of the following named Societies, viz.: The Los Angeles District Agricultural Association; the Santa Clara Valley Agricultural Society; the Sonoma and Marin District Agricultural Society; the San Joaquin Valley District Agricultural Society; the Northern District Agricultural, Horticultural, and Mechanical Society; the Upper Sacramento Agricultural Society; the Siskiyou County Agricultural Society; and the Bay District Horticultural Society; and the California Vine-growers' and Wine and Brandy Manufacturers' Association, for each of the years eighteen hundred and seventy-two and eighteen hundred and seventy-three. Upon presentation of the requisition of the President and Secretary of either of the Societies above named to the State Controller, the Controller shall draw his warrant on the Treasurer in favor of such Society for the amount appropriated to such Society, and the Treasurer shall pay the same. The money so drawn by each Society shall be used for the purpose of paying premiums for the various agricultural, mineral, mechanical, and manufacturing products of this State, and for no other purpose.

SEC. 2. The Directors of each of the above-named Societies, except the State Agricultural Society, shall each year report to the State Board of Agriculture the name and post-office address of each of the officers of such Society, on or before the first day of May; and on or before the first day of December of each year they shall report to said Board of Agriculture the transactions of said Society, including the list of articles exhibited and premiums awarded; the amount

of receipts and expenditures of the year, and the objects for which the expenditures have been made; the new industries inaugurated and new products produced, and any and all other facts showing the development of the resources of the district embraced in such Society, which they may deem worthy of such report.

SEC. 3. The State Board of Agriculture shall report annually, on or before the fifteenth day of January, to the Governor of the State, the full transactions of the State Society, including the facts and statistics collected and information gained on the subjects for which it exists; also, including the report from each of the above-named Societies, or so much thereof as said Board may deem of value for publication.

SEC. 4. The Governor shall cause five thousand volumes of said report of the State Board of Agriculture to be printed each year, at the expense of the State, and paid for as other public printing, and delivered to the State Agricultural Society for general distribution.

SEC. 5. All laws or parts of laws conflicting with the provisions of this Act are hereby repealed.

SEC. 6. This Act shall take effect and be in force from and after its passage.

AN ACT

TO APPROPRIATE MONEYS TO PAY THE PRESENT OUTSTANDING INDEBTEDNESS OF THE STATE AGRICULTURAL SOCIETY, CONTRACTED IN ERECTING THE GRAND STAND, AND MAKING OTHER IMPROVEMENTS TO THE LANDS AND PROPERTY OF SAID SOCIETY, APPROVED MARCH THIRTIETH, EIGHTEEN HUNDRED AND SEVENTY-SIX.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. The sum of sixteen thousand one hundred and forty-one dollars and eighty-nine cents is hereby appropriated, out of any moneys in the State treasury not otherwise appropriated, to pay the outstanding indebtedness of the State Agricultural Society incurred in erecting the grand stand, and making other improvements upon the lands and property of said Society; and the Controller of State is hereby directed and authorized to draw his warrant in favor of said Society, upon the requisition of the President and Secretary of the same, which requisition shall be accompanied with certified copies of the evidences of debt to be canceled equal in amount to the amount of the requisition for the said sum of sixteen thousand one hundred and forty-one dollars and eighty-nine cents, and the Treasurer of State is hereby authorized and directed to pay the same. The money so drawn by said State Agricultural Society shall be used for the purpose of canceling the present outstanding indebtedness thereof, and for no other purpose.

SEC. 2. This Act shall take effect and be in force from and after its passage.

AN ACT

FOR THE ENCOURAGEMENT OF AGRICULTURE AND OTHER INDUSTRIES, APPROVED MARCH EIGHTEENTH, EIGHTEEN HUNDRED AND SEVENTY-EIGHT.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. There is hereby appropriated, out of any money in the treasury not otherwise appropriated, the sum of five thousand dollars for the State Agricultural Society; the sum of fifteen hundred dollars for the Upper Sacramento Valley Agricultural Society; the sum of fifteen hundred dollars for the San Joaquin Valley Agricultural Society; the sum of fifteen hundred dollars for the Golden Gate District Fair Association; the sum of fifteen hundred dollars for the Sonoma and Marin District Agricultural Society; the sum of fifteen hundred dollars for the Northern District Agricultural Society; the sum of fifteen hundred dollars for the Napa and Solano District Agricultural Society; the sum of fifteen hundred dollars for the Santa Clara Valley Agricultural Society; the sum of fifteen hundred dollars for the Southern District Agricultural Society; the sum of one thousand dollars for the Plumas, Lassen, and Modoc District Fair; one thousand dollars for the Monterey County Agricultural Society; one thousand dollars for the El Dorado County Agricultural Society, and one thousand dollars for the Siskiyou County Agricultural Society, for each of the years eighteen hundred and seventy-nine. Upon the presentation of the certificate of the President and Secretary of either of the Societies named above to the State Controller, that such sums have been expended in premiums in accordance with the provisions of this Act, at a fair held during the year eighteen hundred and seventy-eight and eighteen hundred and seventy-nine, the Controller shall draw his warrant on the

Treasurer in favor of such Society, for the amount appropriated to such Society, and the Treasurer shall pay the same. The money so drawn by each Society shall be used for the purpose of paying premiums for the different kinds of live stock, and the various agricultural, mineral, mechanical, and manufacturing products of this State, and for no other purpose; and no part whatever shall be given in any contingency in purses for horse-racing.

SEC. 2. The Directors of each of the above named Societies, except the State Agricultural Society, shall each year report to the State Board of Agriculture the name and post-office address of each of the officers of such Society, on or before the first day of May; and on or before the first day of December of each year they shall report to said Board of Agriculture the transactions of said Society, including the list of articles exhibited, and for which premiums were awarded; the amount of receipts and expenditures of the year, and the object for which the expenditures have been made; the new industries inaugurated, and new products produced, and any and all other facts showing the development of the resources of the district embraced in such Society which they may deem worthy of such report.

SEC. 3. The State Board of Agriculture shall report annually, on or before the first day of February, to the Governor of the State the full transactions of the State Society, including the facts and statistics collected and information gained on the subject for which it exists; also, including the report from each of the above-named Societies, or so much thereof as said Board may deem of value for publication.

SEC. 4. The Governor shall cause five thousand volumes of said report of the State Board of Agriculture to be printed each year, at the expense of the State, the cost not to exceed one dollar per volume, and paid for as other public printing, and delivered to the State Agricultural Society for general distribution.

SEC. 5. All Acts and parts of Acts in conflict with the provision[s] of this Act are hereby repealed.

SEC. 6. This Act shall take effect and be in force from and after its passage.

ANNUAL REPORT OF THE BOARD OF DIRECTORS FOR 1878.

To the Members of the State Agricultural Society:

GENTLEMEN: In presenting this, the twenty-fifth annual report, the Board of Directors of the California State Agricultural Society once more have every reason to congratulate the members and the entire people of the State on the success of its management, and the increased usefulness which has attended the efforts and progress of the Society during the year just gone.

The future of the Society has never been more bright than it is at this time. The further success of the Society depends in a much greater measure upon you, the members thereof, than is generally understood. It requires the aid of each individual member to make any association, in its aims and business, a success. We feel assured, and we get the assurance from your actions in the past, that you will spare no individual exertion to carry the Society onward and upward until it becomes what it should and can be, second to none in its usefulness and prosperity. The year just closed has been a remarkable one in the history of the Society. A quarter of a century since it came into existence. It has, of necessity, like all institutions of our State, had to encounter dark and dismal days, when its life seemed almost gone; but, thanks to the efficient management, it has outlived all dangers, and with just, honest, and capable management you have nothing to fear for the future of this Society.

During the year the producing, and particularly the laboring classes in the cities, have experienced financial distress. The farming community all over the State, with but comparatively few exceptions, have been rewarded for their industry by good crops; they have plenty and to spare. Agriculture is constantly receiving a noticeable increase, year after year, in this State. The farmers are raising better stock of all kinds; they cultivate their land and handle their various crops in a more remunerative and scientific manner. This is largely the result of their being brought together and exhibiting at our annual fairs, thus aiding not only themselves but the Society in accomplishing the object and aim for which the Society was organized and is supported for.

At our last annual meeting there was a livelier interest taken than for years past. As the number of votes cast will show, there were present and participated three hundred and seventy members, and though so many were present from all sections of the State the meeting was in every way marked by the utmost harmony and good feeling; and but a single idea seemed to prevail, and that was the welfare of the Society.

Since then the flood-gates of heaven were opened, and submerged the low lands that border upon our rivers, sweeping away levees and

embankments, destroying a great amount of valuable property, and depriving the owners from raising their usual crops this season; yet, with the usual tenacity of Californians, they have rebuilt and repaired miles upon miles of levees the past summer—building them larger, higher, and on more scientific principles than those destroyed—and have one and all learned valuable lessons that will prove beneficial to them in the future.

The product of the cereals during the past season has been satisfactory when taken as a whole. The most important one of all is wheat, the yield of which was much greater than in eighteen hundred and seventy-seven. Some portions of the State showed a decrease, while other portions had a largely increased yield.

The quality of wheat raised during the season was far above the average, as compared with our own productions in years gone by. There is no question but our State can and will raise more wheat each year. The experiment of rotation in cereal crops is being tried by many of our farmers. The new or wild lands that are being brought under cultivation are invariably sown to wheat, the first and second seasons at least, and, as a consequence, the yield of this, our greatest article of export, is being annually increased. The yield or product of barley, oats, and rye was more than for many years. They each and all commanded fair figures, remunerating well the raisers for their time and labor. It is estimated by good authority that there is grain enough, at the present time, in store-houses in California to supply the wants and demands of our own people for the next three years, even though there was not a bushel of any kind produced during that time.

The shipments during the first nine months of the year eighteen hundred and seventy-eight from San Francisco to the East, Europe, Asia, the islands of the Pacific, Mexico, South America, and Australia, were five million one hundred and seventy-two thousand four hundred and sixteen centals of wheat, ninety-six thousand seven hundred and eighty-two centals of barley, and fourteen thousand four hundred and fifty-six centals of oats. Not only was California blessed with abundance of wheat, but the Commissioner of Agriculture reports that the yield of the United States was by far the largest ever recorded from statistics.

According to the annual wool report of E. Grisar & Company of San Francisco, the product of eighteen hundred and seventy-eight was forty million eight hundred and sixty-two thousand and sixty-one pounds, a decrease of twelve million two hundred and forty-eight thousand six hundred and eighty pounds. For the various causes that lead to this falling off see their report, which we herewith publish.

The vintage of eighteen hundred and seventy-eight surpassed, in quantity and quality, that of previous years, amounting to ten million gallons, clearly demonstrating that the manufacture of wine is destined to rank as one of the leading industries of our State.

Those engaged in the culture of the grape are constantly improving their vineyards, and cultivating only the very best varieties for wine or raisins. Our wines are being introduced into all the European countries, and are received with favor, being only mentioned by competent judges to be praised. They command a good figure in the Eastern States, being eagerly sought by those who appreciate the pure unadulterated wines.

The cultivation of grapes for the manufacturing of raisins is being carried on in this State with marked success, and though the enterprise is in its infancy, it is destined ere long to form a prominent feature in our exports. The amount of raisins manufactured during the season is estimated to be one million pounds. The best of judges pronounce them equal to any imported article, and that opinion is supported by the awards given to the California raisins at the Centennial, and also at the International Exhibition, lately held at Paris, at both of which they were awarded medals for their flavor, size, and other fine qualities.

Another important industry that is receiving flattering encouragement is the manufacture of brandy from the grape. It is steadily, year by year, increasing in quantity and quality.

We can truthfully boast of making as fine liquors from the grape in California as can be produced anywhere in the known world. Our wines of all kinds, and brandies, cannot be excelled by any of the same age, and will at no far distant day become one of our largest sources of revenue. The grape crop this season was the largest ever gathered in the State—three hundred tons, in consignments of sixty-thousand pounds, having been shipped to Philadelphia alone. Our exports of all kinds of green fruits for this season were larger than they were in eighteen hundred and seventy-seven, and commanded better prices. Those engaged in shipping have learned how to pack and send pears, apples, plums, grapes, etc., to any of the Atlantic cities, and even to Europe, and have them arrive at their destination in good condition. They are eagerly sought for by those who can afford the luxury, and as a consequence command fancy prices. This trade is year by year increasing, as transportation becomes more easy and rapid.

We regret that there are not more persons engaged in the cultivation of the universally used tobacco in this State, for our climate is certainly favorable, and much of the soil of California is peculiarly adapted to its successful culture. At our late fair we had proofs of this, for we had exhibits from Yolo, Placer, and Sacramento counties which was pronounced by all who professed to know that it was far above the average Virginia raised tobacco. It is an industry that there is no doubt would prove renumerative to any who might engage in raising it, especially those familiar with the cultivation and curing.

During the year the Board have made many valuable improvements to the property of the Society, viz.: Remodeling, removing, and rebuilding of the old stables, and building new ones, removing the sheep and goat pens, constructing a building for the exhibition of agricultural machinery and implements; the erection of an amphitheater for the examination of live stock by the Judges, laying out and making beautiful triangular parks at the first turns of the track. These parks have been seeded to grass, and valuable shade and orange trees planted therein. These improvements are all permanent, being useful, as well as greatly ornamenting and beautifying the grounds, and will prove of great benefit to the exhibitors and visitors as well as to the Society for all time to come. The cost of the entire improvements made during the year in round numbers is near ten thousand dollars. They are worth much more to the Society than their cost, as time will prove.

Many thanks are due from the Society to the citizens of Sacra-

mento for the movement inaugurated by them to provide auxillary entertainments to call the masses to the fair. The Executive Committee raised and disbursed in the neighborhood of three thousand dollars. Each and every member of that committee put aside personal interests and labored zealously for the success of the experiment. The result was all that the most sanguine could ask. The movement thus started was copied by the citizens of Reno, Carson, and many other places, giving in each instance, as it did here, general satisfaction not only to those who contributed, but as well to those who managed the details; in each case adding greatly to the enjoyment of visitors, and still more to the general success of the exhibition.

Through the exertions of this Society and the magnanimity of the last Legislature we received an appropriation of five thousand dollars for two years, every single dollar of which we are pledged to pay in premiums, and premiums only. This appropriation enabled us to increase the amounts of our premiums, and add many new ones to our list. The competition these increased premiums caused, and the beneficial effect they had, is shown by the largely increased number of animals and articles that were exhibited at our fair.

Our fair of eighteen hundred and seventy-eight, both at the park and pavilion, exceeded, in a marked degree, any former exhibition of this Society, giving the most convincing proofs of the increased interest taken by the exhibitors and contestants for premiums in each and every department. It was pronounced by one and all to be the most satisfactory and valuable one recorded in the history of this Society, establishing, beyond the possibility of doubt, the present value of our organization to all classes, fully indicating its usefulness in the future.

The exhibits at the Pavilion were varied, and equal, if not superior, to any made at previous fairs. At the park, the horses, cattle, sheep, goats, and swine were all that could be asked in point of numbers or breeding, and prove conclusively that the live stock of California, though a young State, equals any on earth.

The Fair was an entire success in each and every particular, giving universal satisfaction to the exhibitors, visitors, and those who had the management of its details. Our speed programme gave general satisfaction. The trials of speed and bottom were exciting, and never excelled on this coast. The purses hung up were liberal, and, as a consequence, brought many fine animals together to compete for them; and although they were liberal, they proved a source of revenue instead of a drain upon the Society's treasury, and formed one of the leading attractions and sources of pleasure to the visitors during the fair.

The Board proposes, with the assistance of the people of the State, to make the fair of eighteen hundred and seventy-nine a real exposition of all the industries of the State. To this end a new and comprehensive premium list will be prepared and published at an early date, embracing the products of every industry on the coast, and offering liberal premiums for their exhibition. By correspondence, circulars, and an extensive distribution of premium lists, we expect to reach the representatives of each industry, and wake up in them an earnest interest in their development, and secure a general exhibition of samples of their respective products at the coming fair.

We are able to report the following favorable financial condition

of the Society at the close of the year eighteen hundred and seventy-eight, viz.:

The receipts from all sources were	\$46,014 15
The expenditures were:	
For bills and premiums of 1877	2,035 97
For improvements of 1878	9,609 99
For cash premiums of 1878	10,965 50
For stakes and purses of 1878	13,775 00
For advertisements of 1878	2,015 20
For salaries and other expenditures of 1878	12,365 97
Total expenditures	\$50,767 63
Expenditures over receipts	\$4,753 48

This we consider a good showing, in fact one of the best for years past, and, although the Society has an indebtedness it has for that indebtedness much needed and permanent improvements that cost double the amount of the debt, and worth much more to the Society by far than can be counted in money.

We have exchanged reports with the Agricultural Societies of Illinois, Kansas, Connecticut, Indiana, Massachusetts, and the Department of Agriculture at Washington. We have a number of the Agricultural Department Reports for the years eighteen hundred and seventy-four, eighteen hundred and seventy-five, and eighteen hundred and seventy-six on hand for distribution.

In accordance with the provisions of the Act of the Legislature making the appropriation for eighteen hundred and seventy-eight and eighteen hundred and seventy-nine to the various District and County Societies, we have received reports from the following ones, and have tabulated the amount of appropriation, amount drawn, and amount of premiums paid by each, viz.:

SOCIETY.	Amount Appropriated.	Amount Drawn.	Premiums Paid.
Upper Sacramento Valley Agricultural Society ..	\$1,500 00	\$1,500 00	\$1,650 00
San Joaquin Valley District Agricultural Society ..	1,500 00	1,500 00	1,429 00
Sonoma and Marin District Agricultural Society ..	1,500 00	*1,522 50	1,269 50
Napa and Solano District Agricultural Society ..	1,500 00	1,500 00	2,732 50
Santa Clara Valley Agricultural Society	1,500 00	1,514 50	2,358 00
Monterey County District Agricultural Society ..	1,000 00	1,000 00	1,111 00
El Dorado County Agricultural Society	1,000 00	1,000 00	662 00
Siskiyou County Agricultural Society	1,000 00	949 50	951 51

* Silver.

Making eight out of eleven Societies that have complied with the law. The Golden Gate District Fair Association (of Oakland) and the Southern District (of Los Angeles) each received one thousand five hundred dollars; also, the Plumas, Lassen, and Modoc District Fair Association (of Susanville) received one thousand dollars. Up to this date neither one of these last mentioned three Societies have sent reports to this office.

STATEMENT OF RECEIPTS AND DISBURSEMENTS FOR 1878.

RECEIPTS.

1878.	
Jan. 23—Annual memberships sold at election	\$1,330 00
Feb. 11—Robert Allen, rent of Park for February	350 00

 Landrum & Rodgers, Watsonville—Pen of ten kids.

SWINE.

ESSEX AND BERKSHIRE.

Boars two years old and over.

Alfred Parker, Bellota—Kentuck.
 Alfred Parker, Bellota—Black Bird.

Under two years old.

Alfred Parker, Bellota—Joe Bowers.
 Mike Bryte, Yolo—Oshkosh Prince.
 John Ryder, Sacramento—Commodore No. 1525.

Six months and under one year.

Alfred Parker, Bellota—Dandy Jim.
 John Kennedy, Sacramento—Young Brigham.
 R. P. Saxe, San Francisco—Black Prince of Linden.
 John Rider, Sacramento—Canute No. 2015.

Breeding sow.

Alfred Parker, Bellota—Granger Girl.
 Alfred Parker, Bellota—Fancy Jane.
 Alfred Parker, Bellota—Viola.

Mike Bryte, Yolo—Black Queen.

Mike Bryte, Yolo—Peggy.

John Kennedy, Sacramento—Eliza Young.

John Rider, Sacramento—Princess of Wooddale No. 3768.

Sow six months old and under one year.

Alfred Parker, Bellota—May Queen.

John Kennedy, Sacramento—Jennie.

John Kennedy, Sacramento—Lucy.

R. P. Saxe, San Francisco—Hattie of Linden.

John Rider, Sacramento—Flora Belle No. 4316.

Pigs under ten months old.

Alfred Parker, Bellota—One pair of pigs.

Mike Bryte, Yolo—One pair of pigs.

John Rider, Sacramento—One pair of pigs.

E. Comstock, Yolo—One pair of pigs.

POLAND CHINA AND CHESTER WHITE.

Boar six months old and under one year.

Robert Roberts, Grafton—Sam.

Breeding sow.

Robert Roberts, Grafton—Nellie.

Sow six months old and under one year.

W. C. Thomas, Woodland—Betty.

Pigs under ten months old.

Robert Roberts, Grafton—One pair of pigs.

SWEEPSTAKES.

Boar of any age or breed.

Alfred Parker, Bellota—Kentuck.

Alfred Parker, Bellota—Black Bird.

Mike Bryte, Yolo—Oshkosh Prince.

John Rider, Sacramento—Commodore.

Sow of any age or breed.

Alfred Parker, Bellota—Granger Girl.

Alfred Parker, Bellota—Fancy Jane.

Alfred Parker, Bellota—Viola.

Mike Bryte, Yolo—Black Queen.

John Rider, Sacramento—Princess of Wooddale.

Six pigs of any age or breed.

Robert Roberts, Grafton—Pen of six pigs.

W. C. Thomas, Woodland—Pen of six pigs.

Alfred Parker, Bellota—Pen of six pigs.

Mike Bryte, Yolo—Pen of six pigs.

E. Comstock, Yolo—Pen of six pigs.

John Rider, Sacramento—Pen of six pigs.

Family, all of same breed, consisting of one boar, two sows, and six pigs of any age.

Mike Bryte, Yolo—Oshkosh Prince, Black Queen, Peggy, and six pigs.

John Rider, Sacramento—Commodore, Lady Jane, Princess of Wooddale, and six pigs.

POULTRY.

John Herring, Sacramento—Trio of Light Brahmas.

Mrs. C. H. Sprague, Woodland—Trio of Light Brahmas.

John Herring, Sacramento—Trio of White Cochins.

John Herring, Sacramento—Trio of Buff Cochins.

Mrs. C. H. Sprague, Woodland—Trio of Partridge Cochins.

Mrs. C. H. Sprague, Woodland—Trio of Buff Cochins.

Mrs. C. H. Sprague, Woodland—Trio of White Cochins.

P. M. Chatterton, Sacramento—Trio of Games.

John Herring, Sacramento—Trio of Silver-Spangled Hamburgs.

Mrs. C. H. Sprague, Woodland—Trio of Silver-Spangled Hamburgs.

Mrs. C. H. Sprague, Woodland—Trio of Golden-Penciled Hamburgs.
 Mrs. C. H. Sprague, Woodland—Trio of Black Hamburgs.
 Samuel Blair, Sacramento—Trio of White Leghorns.
 Samuel Blair, Sacramento—Trio of Brown Leghorns.
 Samuel Blair, Sacramento—Trio of Dominique Leghorns.
 Samuel Blair, Sacramento—Trio of Black Leghorns.
 George Bement, St. Helena—Trio of Brown Leghorns.
 John Herring, Sacramento—Trio of White Leghorns.
 John Herring, Sacramento—Trio of Brown Leghorns.
 Mrs. C. H. Sprague, Woodland—Trio of Brown Leghorns.
 Mrs. C. H. Sprague, Woodland—Trio of White Leghorns.
 F. S. George, Sacramento—Trio of White-Faced Spanish.
 F. S. George, Sacramento—Trio of White-Face Spanish.
 Samuel Blair, Sacramento—Trio of Plymouth Rocks.
 John Herring, Sacramento—Trio of Plymouth Rocks.
 Mrs. C. H. Sprague, Woodland—Trio of Golden Polish.
 Mrs. C. H. Sprague, Woodland—Trio of Silver Polish.
 Mrs. C. H. Sprague, Woodland—Trio of Black Polish.
 Mrs. C. H. Sprague, Woodland—Trio of Bearded Golden Polish.
 W. Walter Bassett, Sacramento—Trio of Game Bantams.
 Mrs. C. H. Sprague, Woodland—Trio of Black-Breasted Red Game Bantams.
 Mrs. C. H. Sprague, Woodland—Trio of Golden Bantams.
 H. C. Kirk, Sacramento—Trio of White Bantams.
 R. Davis, Sacramento—Trio of White Bantams.
 W. Kerth, Sacramento—Three pair of Crested Ducks.

Best display of poultry.

Samuel Blair, Sacramento—Chickens.
 John Herring, Sacramento—Chickens.

ARTICLES EXHIBITED AT THE PARK.

SECOND DEPARTMENT—MACHINERY, ENGINES, ETC.

CLASS I.

M. C. Hawley & Company, Sacramento—Portable steam engine, straw burner.
 M. C. Hawley & Company, Sacramento—Hoadley's portable steam engine.
 M. R. Rose, Sacramento—One steam engine.
 M. R. Rose, Sacramento—One iron turning lathe.
 C. Sharp, Jr., San Francisco—One water-wheel, Higgins'.
 R. A. Sarle, San Francisco—One water-wheel.

CLASS II.

T. C. Churchman, Sacramento—One sweep horse power.
 M. C. Hawley & Company, Sacramento—One threshing machine.
 M. C. Hawley & Company, Sacramento—One cider mill and press.
 M. C. Hawley & Company, Sacramento—Two Taylor horse hay rakes.
 M. C. Hawley & Company, Sacramento—One Burdick's hay and straw cutter.
 M. C. Hawley & Company, Sacramento—One Miller hay press.
 M. C. Hawley & Company, Sacramento—One sandwich power corn sheller.
 M. C. Hawley & Company, Sacramento—One sandwich hand corn sheller.
 M. C. Hawley & Company, Sacramento—One lawn mower.
 M. C. Hawley & Company, Sacramento—Five post hole augers.
 M. C. Hawley & Company, Sacramento—Five well augers.
 M. C. Hawley & Company, Sacramento—One four-inch well auger.
 Byron Jackson, Woodland—One threshing machine.
 William Guttentuber & Company, Sacramento—One sweep horse power.
 Frank Brothers & Company, Sacramento—One Victor sulky hay rake.
 Frank Brothers & Company, Sacramento—One Coats' sulky hay rake.
 Frank Brothers & Company, Sacramento—One Senior cider mill and press.
 Frank Brothers & Company, Sacramento—One Junior cider mill and press.
 Frank Brothers & Company, Sacramento—One Pacific straw cutter, Junior.
 Frank Brothers & Company, Sacramento—One Pacific straw cutter, Senior.

Frank Brothers & Company, Sacramento—One Mound City corn sheller.
Sweepstake Plow Company, San Leandro—One Burrill corn sheller.

CLASS III.

M. C. Hawley & Company, Sacramento—One Buckeye wheat drill, two-horse.
M. C. Hawley & Company, Sacramento—One Buckeye grain broadcast sowing machine.
M. C. Hawley & Company, Sacramento—One Meadow King mower.
M. C. Hawley & Company, Sacramento—One hay loader.
M. C. Hawley & Company, Sacramento—One set Jackson header lifters.
M. C. Hawley & Company, Sacramento—One self-feeder for threshing machine.
M. C. Hawley & Company, Sacramento—One corn planter, horse power.
M. C. Hawley & Company, Sacramento—Two iron frame cultivators.
M. C. Hawley & Company, Sacramento—One wood frame cultivator.
M. C. Hawley & Company, Sacramento—One double shovel plow.
M. C. Hawley & Company, Sacramento—One sixteen-foot Haines' header.
M. C. Hawley & Company, Sacramento—One ten-foot Haines' header.
Byron Jackson, Woodland—One self-feeder for threshing machine, with elevator attachment.
Sacramento Plow Company, by R. S. Carey, Sacramento—One mowing machine.
Charles Keehner, Roseville, Placer County—One harrow.
James Harris, by H. R. Harris, San Francisco—Two ten-foot harrows.
James Harris, by H. R. Harris, San Francisco—One twelve-foot harrow.
James Harris, by H. R. Harris, San Francisco—One fourteen-foot harrow.
James Harris, by H. R. Harris, San Francisco—One wheel harrow.
James Harris, by H. R. Harris, San Francisco—One broadcast seed sower.
Thomas J. Burke, Amador City—Three Randall pulverizing harrows.
Nehr & Company, Roseville—Four iron section harrows.
Nehr & Company, Roseville—Two iron cultivators.
William Bowles, Brighton—One derrick rig, complete.
William Bowles, Brighton—One net for header wagon for stacking grain.
M. C. Hawley & Company, Sacramento—One derrick rig, complete.
Mike Miller, Sacramento—One potato digger.
William Guttenberger & Company, Sacramento—One field roller and crusher.
William Guttenberger & Company, Sacramento—One harrow.
Frank Brothers & Company, Sacramento—One two-horse wheat drill, McSherry.
Frank Brothers & Company, Sacramento—One mowing machine, Wood's.
Frank Brothers & Company, Sacramento—One self-raking reaper, Wood's.
Frank Brothers & Company, Sacramento—One self-binding harvester, Wood's.
Sweepstake Plow Company, San Leandro—One twelve-foot header.
Sweepstake Plow Company, San Leandro—One eight-foot header.
Sweepstake Plow Company, San Leandro—One wheat drill.
Sweepstake Plow Company, San Leandro—One broadcast seed sower.
Sweepstake Plow Company, San Leandro—One mowing machine.
E. E. Ames, Sacramento—One harvester with automatic binder attached.
E. E. Ames, Sacramento—One reaping machine with binder attached.
A. W. Lockhart, Sacramento—One self-feeder for threshing machine.

CLASS IV.

A. J. Loomis, Red Bluff, Tehama County—One Hickman's farm gate.
Daniel Flint, Sacramento—One farm gate.
M. C. Hawley & Company, Sacramento—One Granger farm feed mill.
M. C. Hawley & Company, Sacramento—One Champion fanning mill.
M. C. Hawley & Company, Sacramento—One regulating windmill.
M. C. Hawley & Company, Sacramento—Five Howe's platform scales.
Brower & Read, Marysville—One Pacific windmill.
M. C. Hawley & Company, Sacramento—One Challenge farm feed mill.
M. R. Rose, Sacramento—One self-regulating windmill.
Alexander & Chapin, Sacramento—One self-regulating windmill.
Bachelder Manufacturing Company, Napa—One self-regulating windmill.
Berry & Place, by J. H. Rhoades, San Francisco—One California windmill.
G. W. Harlow, Brighton, Sacramento County—One farm gate.
L. H. Woodin, by E. Woodin, Sacramento—One windmill.
Frank Brothers & Company, Sacramento—One fanning mill, Racine.
Sweepstake Plow Company, San Leandro—One feed mill, California.
Sweepstake Plow Company, San Leandro—One grain separator.
Nash & Klees, Sacramento—One grain separator.
Nash & Klees, Sacramento—One fanning mill.
Nash & Klees, Sacramento—One power grain cleaner for threshing machine.

CLASS V.

T. C. Churchman, Sacramento—Apparatus for raising water for irrigating purposes.
T. C. Churchman, Sacramento—One well pump.

- George S. Follansbee, Miners' Iron Works, San Francisco—Apparatus for raising water for irrigating and mining purposes.
 M. R. Rose, Sacramento—Two well pumps.
 M. R. Rose, Sacramento—Apparatus for raising water for irrigating purposes.
 William Guttenberger & Company, Sacramento—One well pump.
 William Guttenberger & Company, Sacramento—Apparatus for raising water for irrigating purposes.
 William Guttenberger & Company, Sacramento—Apparatus for raising water for mining purposes.
 Frank Brothers & Company, Sacramento—One farm road scraper.

CLASS VI.

- M. C. Hawley & Company, Sacramento—Four twelve-inch John Deere two-gang plows.
 M. C. Hawley & Company, Sacramento—One sixteen-inch Gilpin sulky plow.
 M. C. Hawley & Company, Sacramento—Two stubble plows, John Deere.
 M. C. Hawley & Company, Sacramento—Three Prairie Queen sod plows, John Deere.
 M. C. Hawley & Company, Sacramento—Three steel plows, John Deere.
 M. C. Hawley & Company, Sacramento—One cast iron plow, John Deere.
 M. C. Hawley & Company, Sacramento—Three subsoil plows, John Deere.
 M. C. Hawley & Company, Sacramento—One side-hill plow, John Deere.
 M. C. Hawley & Company, Sacramento—One one-horse plow, No. 80.
 Sacramento Plow Company, by R. S. Carey, Sacramento—Two ten-inch two-plow gangs.
 Sacramento Plow Company, by R. S. Carey, Sacramento—One twelve-inch two-plow gang.
 Sacramento Plow Company, by R. S. Carey, Sacramento—One Granger five-plow gang.
 Sacramento Plow Company, by R. S. Carey, Sacramento—One ten-inch stubble plow.
 Sacramento Plow Company, by R. S. Carey, Sacramento—One one-horse plow.
 William Fruhling, San José—One gang plow.
 William Fruhling, San José—One subsoil gang plow and cultivator and harrow combined.
 James Harris, by H. R. Harris, San Francisco—One gang plow.
 C. Myers, Napa City—One gang plow.
 Frank Brothers & Company, Sacramento—One gang plow, Browne.
 Frank Brothers & Company, Sacramento—One gang plow, Buford.
 Frank Brothers & Company, Sacramento—One gang plow, Myers.
 Frank Brothers & Company, Sacramento—One sulky plow, Buford.
 Frank Brothers & Company, Sacramento—Two sulky plows, Browne.
 Frank Brothers & Company, Sacramento—One sulky plow, California.
 Frank Brothers & Company, Sacramento—Three stubble plows, Collins.
 Frank Brothers & Company, Sacramento—One sod plow, Nebraska.
 Frank Brothers & Company, Sacramento—Two turf and stubble plows, Buford.
 Frank Brothers & Company, Sacramento—Three steel plows, Blackhawk.
 Frank Brothers & Company, Sacramento—Two one-horse plows, Blackhawk.
 Frank Brothers & Company, Sacramento—One iron beam plow, Clipper.
 Frank Brothers & Company, Sacramento—One iron beam plow, Red Jacket.
 Sweepstake Plow Company, San Leandro—Two single sulky plows, fourteen and twenty-inch.
 Sweepstake Plow Company, San Leandro—One three-plow gang, ten-inch.
 Sweepstake Plow Company, San Leandro—Three two-plow gangs, twelve-inch.
 Sweepstake Plow Company, San Leandro—Two two-plow gangs, ten-inch.
 Sweepstake Plow Company, San Leandro—One five-plow gang, ten-inch, Granger.
 Sweepstake Plow Company, San Leandro—One five-plow gang, eight-inch, Granger.
 Sweepstake Plow Company, San Leandro—One single sod plow, fourteen-inch.
 Sweepstake Plow Company, San Leandro—Two steel plows, ten-inch.
 Sweepstake Plow Company, San Leandro—One stubble plow, twelve-inch.
 Sweepstake Plow Company, San Leandro—One side-hill plow.
 E. E. Ames, Sacramento—One sulky and stubble plow combined.
 E. E. Ames, Sacramento—One gang plow.
 E. E. Ames, Sacramento—One steel plow, hand iron beam.
 E. E. Ames, Sacramento—One garden plow, hand.
 E. E. Ames, Sacramento—One sulky plow, tule and stubble combined.
 E. E. Ames, Sacramento—One steel plow.

CLASS VII.

- California Carriage Manufacturing Company, Sacramento—One two-horse family carriage.
 California Carriage Manufacturing Company, Sacramento—One one-horse family carriage.
 California Carriage Manufacturing Company, Sacramento—Two top buggies.
 California Carriage Manufacturing Company, Sacramento—One open buggy.
 California Carriage Manufacturing Company, Sacramento—One two-seated open carriage.
 California Carriage Manufacturing Company, Sacramento—One trotting wagon.
 California Carriage Manufacturing Company, Sacramento—One track sulky.
 California Carriage Manufacturing Company, Sacramento—One track wagon.
 California Carriage Manufacturing Company, Sacramento—One ladies' phaeton.
 California Carriage Manufacturing Company, Sacramento—One carriage brake.
 M. C. Hawley & Company, Sacramento—One two-horse family carriage.

M. C. Hawley & Company, Sacramento—One Shutler farm wagon.
 J. Taylor, Smith's Flat, El Dorado County—One wagon brake.
 Joseph F. Hill, Sacramento—One one-horse family carriage, jump seat.
 Joseph F. Hill, Sacramento—Four top buggies.
 Joseph F. Hill, Sacramento—One open buggy.
 Joseph F. Hill, Sacramento—One trotting wagon.
 Joseph F. Hill, Sacramento—Two farm wagons for general purposes.
 Joseph F. Hill, Sacramento—One spring market wagon.
 Joseph F. Hill, Sacramento—One cart.
 Joseph F. Hill, Sacramento—One street goods wagon.
 Joseph F. Hill, Sacramento—Two business wagons.
 Joseph F. Hill, Sacramento—One heavy side spring top buggy.
 Joseph F. Hill, Sacramento—Two four-spring top wagons.
 Joseph F. Hill, Sacramento—Two four-spring open wagons.
 Joseph F. Hill, Sacramento—One wagon or carriage brake.
 J. Henschell, Sacramento—One two-horse family top carriage.
 J. Henschell, Sacramento—One top buggy.
 Johnson & Blue, Sacramento—One top buggy.
 Johnson & Blue, Sacramento—Two open buggies.
 Johnson & Blue, Sacramento—One ladies' phaeton.
 Johnson & Blue, Sacramento—One street goods wagon.
 T. C. Churchman, Sacramento—One spring market wagon.
 T. C. Churchman, Sacramento—One wagon or carriage brake.
 Frank Brothers & Company, Sacramento—Two farm wagons, La Belle.
 Sweepstake Plow Company, San Leandro—Two two-horse family carriages.
 Sweepstake Plow Company, San Leandro—One two-seated open carriage.
 Sweepstake Plow Company, San Leandro—Three top buggies.
 Sweepstake Plow Company, San Leandro—One open buggy.
 Sweepstake Plow Company, San Leandro—Two spring market wagons.
 Sweepstake Plow Company, San Leandro—One street goods wagon.
 Sweepstake Plow Company, San Leandro—Two iron farm wagons for general purposes.
 E. E. Ames, Sacramento—One platform spring wagon.
 E. E. Ames, Sacramento—One top buggy.
 E. E. Ames, Sacramento—One farm wagon for general purposes.
 E. E. Ames, Sacramento—One four-spring top wagon.
 George McDaniel, Sacramento—One two-seated top carriage.
 George McDaniel, Sacramento—One jump-seat open buggy.
 George McDaniel, Sacramento—One mountain top buggy.
 George McDaniel, Sacramento—One end spring single seat open buggy.
 George McDaniel, Sacramento—One Concord side spring buggy.
 J. F. Hill, Sacramento—One road wagon.
 George McDaniel, Sacramento—One two-seated open family carriage.
 George McDaniel, Sacramento—One farm wagon for general purposes.

MISCELLANEOUS.

W. F. Frazier, Sacramento—One redwood plank, eighty-six and one-half inches wide.
 Byron Jackson, Woodland—Four light-weight horse forks.
 Byron Jackson, Woodland—One improved shoe for threshing machine.
 James Harris, by H. R. Harris, San Francisco—Slip shear for gang plows.
 A. D. Boyer, Sacramento—Tire tightener.
 Clark & Davis, Sacramento—One hearse.
 William Guttenberger & Company, Sacramento—Jack for threshing machine.
 G. T. Brown, Stockton—Clark's hay elevator and carrier.
 H. L. Vass, Modesto—Sack holder.
 D. A. Falkner, Centerville, Alameda County—One hand punch and shears.
 William Kirkendall, Sacramento—One feather renovator.
 J. B. King, Sacramento—One extension ladder and fire escape.
 A. J. Loomis, Red Bluff—One floor clamp, Hickman.
 Nash & Klees, Sacramento—One sack holder.
 Bachelder Manufacturing Company, Napa—One wheelbarrow.

ARTICLES EXHIBITED AT THE PAVILION—LOWER HALL.

SECOND DEPARTMENT.

Huntington, Hopkins & Company, Sacramento—One fire extinguisher.
L. L. Lewis & Company, Sacramento—Scroll sawing machine.

CLASS II.

O. A. Davis, Yolo County—Vegetable washer.
Huntington, Hopkins & Company, Sacramento—Lawn mower.
Huntington, Hopkins & Company, Sacramento—Gopher trap.
Huntington, Hopkins & Company, Sacramento—Vegetable cutter.
Huntington, Hopkins & Company, Sacramento—Lawn sprinkler.

CLASS IV.

O. A. Davis, Yolo County—Two bee-hives, without bees.
Huntington, Hopkins & Company, Sacramento—Platform scales.

CLASS V.

Huntington, Hopkins & Company, Sacramento—Assortment of haying and harvesting tools.
Huntington, Hopkins & Company, Sacramento—Sausage meat cutter and stuffer.
Mrs. J. W. Mandeville, Sacramento—Washing machine.
J. R. Crandall, Auburn—Apple parer, corer, and slicer.

CLASS VII.

Huntington, Hopkins & Company, Sacramento—Carriage springs.
California Carriage Manufacturing Company, Sacramento—Carriage springs.

THIRD DEPARTMENT.

CLASS II.

Huntington, Hopkins & Company, Sacramento—Display of cordage.
Huntington, Hopkins & Company, Sacramento—Display of rubber hose.
Huntington, Hopkins & Company, Sacramento—Display of leather belting.

FOURTH DEPARTMENT.

CLASS II.

Huntington, Hopkins & Company, Sacramento—Assortment of axes.
Huntington, Hopkins & Company, Sacramento—Assortment of locks.
Huntington, Hopkins & Company, Sacramento—Assortment of door trimmings.
Huntington, Hopkins & Company, Sacramento—Assortment of window trimmings.
Huntington, Hopkins & Company, Sacramento—Assortment of iron and steel.
Huntington, Hopkins & Company, Sacramento—Assortment of general hardware.

 Marion Biggs, Butte County—Two bushels of rye.
 Marion Biggs, Butte County—Two bushels of barley.
 Marion Biggs, Butte County—One bushel of white corn.
 A. Moulton & Son, Sacramento County—One bale of hops, one hundred and ninety pounds.
 F. P. Lowell, Sacramento County—Half bushel of buckwheat.
 F. P. Lowell, Sacramento County—Half bushel of flax seed.
 Daniel Flint, Sacramento—Two bales of hops.
 John Smith, Sacramento—One sack of sugar beet seed.
 A. Menke, Sacramento County—Three bales of hops.
 George Rich, Sacramento County—Samples of Egyptian corn.
 Joseph Sims, Sacramento County—One sack of white Tuscany wheat.
 George Bement, Napa County—Two bushels of barley.
 R. J. Merkley, Sacramento County—One bale of hops, two hundred and two pounds.
 A. D. Miller, Sacramento County—One sack of oats.
 A. D. Miller, Sacramento County—One sack of barley.
 Moses Wick, Sacramento County—One sack of barley.

CLASS III.

Mrs. J. E. W. Cutter, Sacramento County—Four large pumpkins.
 F. Bursi & Company, Sacramento County—Half bushel of red potatoes.
 F. Bursi & Company, Sacramento County—Half bushel of white potatoes.
 F. Bursi & Company, Sacramento County—Greatest variety of Irish potatoes, half peck each.
 F. Bursi & Company, Sacramento County—Half bushel of sweet potatoes.
 F. Bursi & Company, Sacramento County—Twelve parsnips.
 F. Bursi & Company, Sacramento County—Twelve carrots.
 F. Bursi & Company, Sacramento County—Six long blood beets.
 F. Bursi & Company, Sacramento County—Six turnip beets.
 F. Bursi & Company, Sacramento County—Six sugar beets.
 F. Bursi & Company, Sacramento County—Peck of tomatoes.
 F. Bursi & Company, Sacramento County—Six drumhead cabbages.
 F. Bursi & Company, Sacramento County—Six heads of red Dutch cabbages.
 F. Bursi & Company, Sacramento County—Three heads of cauliflower.
 F. Bursi & Company, Sacramento County—Three heads of brocoli.
 F. Bursi & Company, Sacramento County—Six heads of lettuce.
 F. Bursi & Company, Sacramento County—Half peck red onions.
 F. Bursi & Company, Sacramento County—Half peck yellow onions.
 F. Bursi & Company, Sacramento County—Half peck white onions.
 F. Bursi & Company, Sacramento County—Half peck of peppers for pickling.
 F. Bursi & Company, Sacramento County—Twelve roots of salsify.
 F. Bursi & Company, Sacramento County—Six stalks of celery.
 F. Bursi & Company, Sacramento County—Six marrow squashes.
 F. Bursi & Company, Sacramento County—Six Hubbard squashes.
 F. Bursi & Company, Sacramento County—Large pumpkin.
 F. Bursi & Company, Sacramento County—Twelve ears of green sweet corn.
 F. Bursi & Company, Sacramento County—Six cucumbers.
 F. Bursi & Company, Sacramento County—Half peck of lima beans, in the pod.
 F. Bursi & Company, Sacramento County—Half peck of white beans, dry.

- F. Bursi & Company, Sacramento County—Half peck of kidney bush beans, in the pod.
 F. Bursi & Company, Sacramento County—Half peck of field peas, dry.
 F. Bursi & Company, Sacramento County—Half peck of garden peas, dry.
 F. Bursi & Company, Sacramento County—Half peck of gherkin cucumbers.
 F. Bursi & Company, Sacramento County—Three purple egg plants.
 F. Bursi & Company, Sacramento County—For best collection of vegetables by producer.
 F. Bursi & Company, Sacramento County—For best collection of cabbage other than Dutch and drumhead.
 D. DeBernardi, Sacramento—General collection of vegetables.
 Felice Gabrielle, Sacramento County—Half bushel of red potatoes.
 Felice Gabrielle, Sacramento County—Half bushel of white potatoes.
 Felice Gabrielle, Sacramento County—Half bushel of other variety of potatoes.
 Felice Gabrielle, Sacramento County—Greatest variety of Irish potatoes.
 Felice Gabrielle, Sacramento County—Half bushel of sweet potatoes.
 Felice Gabrielle, Sacramento County—Twelve parsnips.
 Felice Gabrielle, Sacramento County—Twelve carrots.
 Felice Gabrielle, Sacramento County—Six long blood beets.
 Felice Gabrielle, Sacramento County—Six turnip beets.
 Felice Gabrielle, Sacramento County—Six sugar beets.
 Felice Gabrielle, Sacramento County—Peck of tomatoes.
 Felice Gabrielle, Sacramento County—six drumhead cabbages.
 Felice Gabrielle, Sacramento County—Six heads red Dutch cabbages.
 Felice Gabrielle, Sacramento County—Six heads of other varieties of cabbages.
 Felice Gabrielle, Sacramento County—Three heads of cauliflower.
 Felice Gabrielle, Sacramento County—Three heads of brocoli.
 Felice Gabrielle, Sacramento County—Six heads of lettuce.
 Felice Gabrielle, Sacramento County—Half peck of red onions.
 Felice Gabrielle, Sacramento County—Half peck of yellow onions.
 Felice Gabrielle, Sacramento County—Half peck of white onions.
 Felice Gabrielle, Sacramento County—Half peck of peppers for pickling.
 Felice Gabrielle, Sacramento County—Twelve roots of salsify.
 Felice Gabrielle, Sacramento County—Six stalks of celery.
 Felice Gabrielle, Sacramento County—Twelve ears of green sweet corn.
 Felice Gabrielle, Sacramento County—Six cucumbers.
 Felice Gabrielle, Sacramento County—Half peck of Lima beans, in the pod.
 Felice Gabrielle, Sacramento County—Half peck of white beans, dry.
 Felice Gabrielle, Sacramento County—Half peck of kidney bush beans, in the pod.
 Felice Gabrielle, Sacramento County—Half peck of pole beans.
 Felice Gabrielle, Sacramento County—Half peck of field peas, dry.
 Felice Gabrielle, Sacramento County—Half peck of garden peas, dry.
 Felice Gabrielle, Sacramento County—Half peck of castor oil beans.
 Felice Gabrielle, Sacramento County—Half peck of gherkin cucumbers.
 Felice Gabrielle, Sacramento County—Three purple egg plants.
 Felice Gabrielle, Sacramento County—Collection of vegetables by producer.
 J. F. Wight, Sacramento—Three watermelons, Gypsy.
 J. F. Elliott, Yolo County—Three Mountain Sweet watermelons.
 J. F. Elliott, Yolo County—Three other varieties of watermelons.
 O. O. Goodrich, Sacramento—Half bushel of white potatoes.
 O. O. Goodrich, Sacramento—Half bushel of other varieties of potatoes.
 O. O. Goodrich, Sacramento—For greatest variety of Irish potatoes.
 John Smith, Sacramento—Peck of tomatoes.
 William Fern, Sacramento County—Six Hubbard squashes.
 William Fern, Sacramento County—Six Boston marrow squashes.
 A. Henley, Sacramento—One dozen green corn.
 Benjamin Duncan, Brighton—Half bushel of white potatoes.
 Benjamin Duncan, Brighton—Three watermelons.
 Benjamin Duncan, Brighton—Three green-fleshed muskmelons.
 Benjamin Duncan, Brighton—Three yellow-fleshed muskmelons.
 E. F. Aiken, Sacramento—Half peck of white beans.
 E. F. Aiken, Sacramento—Half peck of field peas.
 E. F. Aiken, Sacramento—Half peck of garden peas.
 E. F. Aiken, Sacramento—Half peck of castor oil beans.
 E. F. Aiken, Sacramento—Twelve varieties of garden peas.

CLASS IV.

- F. A. Ebel, Sacramento—Collection of flowering plants in bloom.
 F. A. Ebel, Sacramento—Collection of ornamental foliage plants.
 F. A. Ebel, Sacramento—Collection of new and rare plants.
 F. A. Ebel, Sacramento—Collection of roses in bloom.
 F. A. Ebel, Sacramento—Collection of fuchsias in bloom.

- F. A. Ebel, Sacramento—Collection of cut flowers.
 F. A. Ebel, Sacramento—Collection of bouquets.
 F. A. Ebel, Sacramento—Collection of Australian plants.
 F. A. Ebel, Sacramento—Collection of plants for greenhouse, conservatory, and window culture.
 F. A. Ebel, Sacramento—Display of hanging baskets containing growing plants.
 F. A. Miller, San Francisco—Collection of ornamental foliage plants.
 F. A. Miller, San Francisco—Collection of new and rare plants.
 Mrs. E. H. Williams, Sacramento—Display of hanging baskets containing plants.
 James Hutchinson, Oakland—Collection of cut flowers.

CLASS V.

- McLaughry & Rider, Sacramento County—Seven hundred pounds of cheese.
 W. Kerth & Company, Sacramento County—Twelve cheeses.

CLASS VI.

- C. W. Rapp & Company, Sacramento—Four loaves of baker's bread.
 Mrs. J. P. Odber, Sacramento—Domestic corn bread.
 Mrs. J. P. Odber, Sacramento—Domestic rye bread.
 Mrs. J. P. Odber, Sacramento—Domestic brown bread.
 Mrs. J. P. Odber, Sacramento—Assortment of domestic bread.
 Mrs. J. P. Odber, Sacramento—Display of domestic biscuit.
 W. F. Peterson, Sacramento—Four loaves of baker's bread.
 Mrs. Peter Burns, Sacramento—Fifty pounds of firkin butter, three months old.
 Mrs. Peter Burns, Sacramento—Ten pounds of roll butter.
 Mrs. William Bassett, Sacramento—Domestic wheat bread.
 Mrs. R. K. Wick, Sacramento—Domestic wheat bread.
 Mrs. R. K. Wick, Sacramento—Domestic corn bread.
 Mrs. R. K. Wick, Sacramento—Domestic brown bread.
 Mrs. J. H. Roberts, Sacramento—Domestic rye bread.
 Mrs. J. H. Roberts, Sacramento—Domestic corn bread.
 Mrs. R. K. Wick, Sacramento—Domestic rye bread.
 Schroer Brothers, Sacramento—Display of pilot bread.
 Schroer Brothers, Sacramento—Display of biscuit.
 Schroer Brothers, Sacramento—Display of soda biscuit.
 Schroer Brothers, Sacramento—Display of butter crackers.
 Schroer Brothers, Sacramento—Display of sweet crackers.
 Schroer Brothers, Sacramento—Display of Boston crackers.
 Mrs. E. F. Aiken, Sacramento—Ten pounds of butter, in rolls.
 Mrs. E. F. Aiken, Sacramento—Domestic corn bread.
 Mrs. E. F. Aiken, Sacramento—Domestic rye bread.
 Mrs. E. F. Aiken, Sacramento—Domestic brown bread.
 Mrs. E. F. Aiken, Sacramento—Domestic wheat bread.
 Mrs. E. F. Aiken, Sacramento—General display of domestic bread.
 Miss Nellie Burns, Sacramento—Domestic corn bread.
 Miss Nellie Burns, Sacramento—Domestic rye bread.
 Miss Nellie Burns, Sacramento—Domestic brown bread.
 Miss Nellie Burns, Sacramento—Domestic wheat bread.
 Miss Nellie Burns, Sacramento—Domestic biscuit.
 Miss Nellie Burns, Sacramento—General display of domestic bread.
 Miss Angela Caddogan, Sacramento—Domestic wheat bread.

SIXTH DEPARTMENT.

CLASS I.

- D. C. Young, Sonoma County—Display of apples.
 D. C. Young, Sonoma County—Twelve varieties of apples.
 D. C. Young, Sonoma County—Six varieties of apples.
 D. C. Young, Sonoma County—Three varieties of apples.
 D. C. Young, Sonoma County—Display of pears.
 D. C. Young, Sonoma County—Twelve varieties of pears.
 D. C. Young, Sonoma County—Six varieties of pears.
 D. C. Young, Sonoma County—Three varieties of pears.
 D. C. Young, Sonoma County—Display of peaches.
 D. C. Young, Sonoma County—Seven varieties of peaches.
 D. C. Young, Sonoma County—Six varieties of plums.
 D. C. Young, Sonoma County—Display of tropical fruits.
 D. C. Young, Sonoma County—Display of oranges.
 D. C. Young, Sonoma County—Display of lemons.
 D. C. Young, Sonoma County—Display of seedling fruits.
 D. C. Young, Sonoma County—General display by the producer.

- C. S. Lowell, Sacramento County—One variety of peaches.
 O. O. Goodrich, Sacramento County—Twenty-one varieties of apples.
 O. O. Goodrich, Sacramento County—Nine varieties of pears.
 O. O. Goodrich, Sacramento County—General display by the producer.
 Mrs. R. Blacow, Alameda County—Assortment of lemons.
 Mrs. R. Blacow, Alameda County—Display of seedling fruits.
 George Rich, Sacramento County—Display of tropical fruits.
 James Rutter, Florin—Display of oranges.
 R. B. Blowers, Woodland—General display, comprising many varieties of fruit exhibited by the producer.
 Mrs. R. K. Wick, Sacramento—Display of October seedling peaches.
 Mrs. R. K. Wick, Sacramento—Display of pomegranates.
 J. H. Hoskin, Newcastle—Twenty-one varieties of apples.
 D. DeBernardi & Company, Sacramento—Nine varieties of apples.
 D. DeBernardi & Company, Sacramento—Nine varieties of pears.
 D. DeBernardi & Company, Sacramento—Seven varieties of peaches.
 D. DeBernardi & Company, Sacramento—Seven varieties of plums.
 D. DeBernardi & Company, Sacramento—Display of figs.
 D. DeBernardi & Company, Sacramento—Display of oranges.
 D. DeBernardi & Company, Sacramento—Display of lemons.
 D. DeBernardi & Company, Sacramento—General display of fruit.
 I. S. Bamber, El Dorado County—Twenty-one varieties of apples.
 I. S. Bamber, El Dorado County—Twenty-one varieties of pears.
 I. S. Bamber, El Dorado County—Seven varieties of peaches.
 I. S. Bamber, El Dorado County—Six varieties of plums.
 I. S. Bamber, El Dorado County—Display of seedling fruits.
 O. O. Goodrich, Sacramento County—Display of figs.
 E. M. Smith, Coloma—Twelve varieties of apples.
 E. M. Smith, Coloma—Twelve varieties of pears.
 E. M. Smith, Coloma—Six varieties of peaches.
 E. M. Smith, Coloma—Five varieties of plums.
 E. M. Smith, Coloma—Display of green figs.
 E. M. Smith, Coloma—Display of oranges.
 E. M. Smith, Coloma—Display of seedling fruits.
 E. M. Smith, Coloma—General display of fruit by producer.
 Quinn & Goodwin, Chinese Camp—Display of two varieties of peaches.

CLASS II.

- O. A. Davis, Yolo County—Ten pounds of honey in the comb.
 W. R. Strong, for J. S. Harbison, San Diego—Nine hundred pounds of honey.
 Mrs. James Lansing, Sacramento County—Display of apple jelly, in glass.
 Mrs. James Lansing, Sacramento County—Display of peach jelly, in glass.
 Mrs. James Lansing, Sacramento County—Display of plum jelly, in glass.
 Mrs. James Lansing, Sacramento County—Display of lemon jelly, in glass.
 Mrs. James Lansing, Sacramento County—Display of crab-apple jelly, in glass.
 Mrs. James Lansing, Sacramento County—Display of quince jelly, in glass.
 Mrs. James Lansing, Sacramento County—Display of blackberry jelly, in glass.
 Mrs. James Lansing, Sacramento County—Display of currant jelly, in glass.
 Mrs. James Lansing, Sacramento County—Display of plum jam, in glass.
 Mrs. James Lansing, Sacramento County—Display of peach jam, in glass.
 Mrs. James Lansing, Sacramento County—Display of currant jam, in glass.
 Mrs. James Lansing, Sacramento County—Display of blackberry jam, in glass.
 Mrs. James Lansing, Sacramento County—Display of peach butter, in glass.
 Mrs. James Lansing, Sacramento County—Display of plum butter, in glass.
 Mrs. James Lansing, Sacramento County—Display of preserved fruits, in glass.
 Mrs. James Lansing, Sacramento County—Display of pickles, in glass.
 Mrs. James Lansing, Sacramento County—Display of brandied peaches, in glass.
 Mrs. James Lansing, Sacramento County—Display of tomato catsup, in glass.
 Miss Kittie Henley, Sacramento—Six jars of raspberry jelly.
 Miss Kittie Henley, Sacramento—Six jars of red currant jelly.
 Miss Kittie Henley, Sacramento—Six jars of blackberry jelly.
 Miss Kittie Henley, Sacramento—Six jars of strawberry jelly.
 Miss Kittie Henley, Sacramento—Six jars of quince jelly.
 Miss Ida Chisholm, Sacramento—Display of fruit, in glass.
 Mrs. F. A. Ebel, Sacramento—Display of blackberry jam.
 Mrs. F. A. Ebel, Sacramento—Display of strawberry jelly.
 Mrs. F. A. Ebel, Sacramento—Display of blackberry jelly.
 Mrs. F. A. Ebel, Sacramento—Display of raspberry jelly.
 Mrs. F. A. Ebel, Sacramento—Display of currant jelly.
 Mrs. F. A. Ebel, Sacramento—Display of brandied figs.
 Mrs. E. F. Aiken, Sacramento—Six jars of blackberry jelly.
 Mrs. E. F. Aiken, Sacramento—Six jars of strawberry jelly.

Mrs. E. F. Aiken, Sacramento—Six jars of quince jelly.
 Miss Angela Caddogan, Sacramento—Two jars of blackberry jelly.
 Miss Angela Caddogan, Sacramento—One jar of currant jelly.

CLASS III.

George A. Deitz, Sacramento—Twenty pounds of dried cherries.
 George A. Deitz, Sacramento—Twenty pounds of dried blackberries.
 George A. Deitz, Sacramento—Twenty pounds of dried pears.
 George A. Deitz, Sacramento—Twenty pounds of dried plums.
 George A. Deitz, Sacramento—Twenty pounds of dried prunes.
 George A. Deitz, Sacramento—Twenty pounds of dried figs.
 Mrs. James Lansing, Sacramento County—Twenty pounds of dried apples.
 Mrs. James Lansing, Sacramento County—Twenty pounds of dried figs.
 Mrs. James Lansing, Sacramento County—Twenty pounds of dried pears.
 R. B. Blowers, Woodland—Twenty-five pounds of dried apples.
 R. B. Blowers, Woodland—Twenty-five pounds of dried plums.
 R. B. Blowers, Woodland—Twenty-five pounds of dried pears.
 E. F. Aiken, Sacramento—Twenty-five pounds of dried apples.
 E. F. Aiken, Sacramento—Twenty-five pounds of dried plums.
 E. F. Aiken, Sacramento—Twenty-five pounds of dried nectarines.
 I. S. Bamber, El Dorado County—Ten pounds of dried figs.
 C. S. Lowell, Sacramento County—Half peck of soft-shell almonds.
 C. S. Lowell, Sacramento County—Half peck of hard-shell almonds.
 Mrs. James Lansing, Sacramento County—Half peck of soft-shell almonds.
 E. F. Aiken, Sacramento County—Half peck of English walnuts.
 E. F. Aiken, Sacramento County—Half peck of soft-shell almonds.
 E. F. Aiken, Sacramento County—Two bushels of peanuts.
 D. C. Young, Sonoma County—Half peck of English walnuts.
 D. C. Young, Sonoma County—Half peck of soft-shell almonds.
 D. C. Young, Sonoma County—Twenty-one varieties of table grapes, three bunches each.
 D. C. Young, Sonoma County—Twenty-one varieties of wine grapes, three bunches each.
 D. C. Young, Sonoma County—Exhibit of raisin grapes, three bunches each.
 George A. Deitz, Sacramento—Display of raisins.
 James Rutter, Florin—Twenty-one varieties of table grapes, three bunches each.
 James Rutter, Florin—Twenty-one varieties of wine grapes, three bunches each.
 James Rutter, Florin—Exhibit of raisin grapes, three bunches each.
 James Rutter, Florin—Display of raisins.
 R. B. Blowers, Woodland—Display of raisins.
 R. B. Blowers, Woodland—Twenty-one varieties of table grapes, three bunches each.
 R. B. Blowers, Woodland—Twenty-one varieties of wine grapes, three bunches each.
 R. B. Blowers, Woodland—Exhibit of raisin grapes, three bunches each.
 I. S. Bamber, El Dorado County—Varieties of raisin grapes, three bunches each.
 Thomas Hardie, Placerville—Twenty-one varieties of table grapes, three bunches each.
 Thomas Hardie, Placerville—Varieties of raisin grapes.
 Thomas Hardie, Placerville—Display of raisins.
 Quinn & Goodman, Tuolumne County—Three varieties of grapes.
 Johnson Brandy and Wine Manufacturing Company, Sacramento—One dozen bottles of grape brandy.
 Johnson Brandy and Wine Manufacturing Company, Sacramento—One dozen bottles of California port.
 Johnson Brandy and Wine Manufacturing Company, Sacramento—One dozen bottles of California sherry.

OPENING ADDRESS.

The Assembly Chamber at the Capitol was filled on Wednesday evening, September eighteenth, with a select assemblage of ladies and gentlemen, comprising many prominent citizens from all parts of the State, who assembled to listen to the annual address of the President of the State Agricultural Society, Marcus D. Boruck. At half past seven the speaker was escorted to his seat by a committee composed of the following gentlemen: Governor Wm. Irwin, Senator A. A. Sargent, Hon. James McM. Shafter, Secretary of State Thomas Beck, Hon. Presley Dunlap, Senator Brown, Senator T. McCarthy, Hon. John Boggs, Hon. Caleb Dorsey, Hon. Marion Biggs, Mayor Turner, Trustee Knox, Hon. W. Y. Huestis, the Board of Directors of the State Agricultural Society, E. W. Maslin, Wm. H. Mills, John H. Carroll, I. N. Hoag, and J. Steppacher.

Governor Irwin called the meeting to order, with the following remarks:

LADIES AND GENTLEMEN: We have met here this evening to listen to the address of the President of the State Agricultural Society. It might not be amiss, before introducing him who will address you, that I should make a single remark in relation to the office which a properly conducted Agricultural Society should perform. It is obvious that industrial prosperity lies at the very foundation of all other prosperity in all civilized communities. The power to produce, to produce in a measure far beyond our consumption; to have power to develop our resources beyond what is necessary to sustain mere physical existence—lies, I say, at the very foundation of our existence. It is civilization, and that of a very high degree. It is promotive of national prosperity; much more is it promotive of an esthetic taste; it is promotive of a taste for art, where those having the means to gratify their esthetic tastes can give encouragement, and purchase the products of art. Nor can we have our tastes gratified unless we have leisure; unless we have leisure to devote to study; unless we have opportunities for collecting libraries; unless we have opportunities for admiring art, and everything calculated to excite our faculties for developing them. Now the Agricultural Society is calculated to become a school of education in the domain of materiality, in the development of wealth. It is by comparing the products of one section of country with those of another; by comparing the products which are raised on one farm with those produced on another, that the spirit of emulation is excited, and the result of which will be continued improvement. These, my fellow-citizens, are a few of the things which an Agricultural Society ought to exert, and which, I have no doubt, this Society has exerted in the past; no doubt that a great degree of our excellence in the various departments is due to the efforts of the State Agricultural Society, and the men who have promoted it in past times are entitled to the gratitude of all classes of our citizens, not merely of the agriculturists, but of all other classes, because, in a large degree, the prosperity of

the whole State depends upon those who cultivate the soil. Having made these few remarks, I beg now to introduce to you the President of the State Agricultural Society, Mr. Boruck, who will deliver the annual address.

ADDRESS OF PRESIDENT M. D. BORUCK.

Mr. Boruck, on being introduced, delivered the following address:

LADIES AND GENTLEMEN: It is an old saying, and true as it is trite, that the world moves. If we do not move with it, the fault does not lie with the world, nor with its Maker, but in our own contrariness. Either we remain heavily passive and suffer it to slip by, or we offer a savage resistance to natural progress, and go, crab-like, backward. The Tartar is a specimen of the unimproved, the Mexican is an example of the retrograde. The civilization of the present Great Khan of Tartary is precisely that of Timour, who lived, I forget how many hundred years ago. The civilization of the Mexican is a lower degree than it was in the days of the Aztec. The Emperor of China, who is of the Tartar dynasty, wears to-day the same sharp-toed, thick-soled shoe, and ornamental glass balls as insignia of rank that he did in the time of Confucius; while the wattled huts of Tabasco are simply barbaric cages compared with the majestic ruins of old Tehuantepec. Having arrived at a certain eminence, the Tartar builded himself a resting-place, unmindful of what lay beyond the further and loftier hills, careless of discovering if the country there was fairer and richer than that he lived in. Having arrived at a certain eminence, the Mexican found up-hill walking inconvenient, and quietly turning his back on the towers his ancestors had built heavenward, lazily strolled down the hill to sleep and moon away the years in the glowing valley.

I have introduced these two characters, not because they are the sole available ones, but because, from our familiarity with them, they do the more plainly embody the truth of the proposition advanced. Yes, the world moves, and, thank God, we move with it. Aye, more than that—it is not a willing and eager following of apostles that we indulge in. We congratulate ourselves on being in the van, and that in the ennobling game of follow the leader, the crowd of earnest pushing ones is not going before but coming after us. To put our feet in the print of those who have gone before is good; to keep abreast of the racers is better; but to lead the world is the noblest lot that ever fell to man or nation. It is to reach the last rung in the ladder of ambition, to fill the highest niche in the Temple of Fame!

And who is there shall say we—I mean Americans—are not in the van? Young as is this country, compared with those of Europe, she can furnish a list of names borne by the great ones of earth as long and bright as the catalogue of the stars. Without rustling the pages of a biographical dictionary, let me mention, in art: Benjamin West, who gave to his pictured faces everything short of actual vitality; Randolph Rogers, under whose chisel new Galateas have been born; Albert Bierstadt, who has caught the spirit of American scenery and chained it to his palette; W. J. Hamilton, the American Turner; Thomas Nast, the American Hogarth; and Toby Rosenthal, in whom we have nearer interest than in the others, because he is

Californian. In letters, we have Nathaniel Hawthorne, whose "Scarlet Letter" will never be erased; Washington Irving, whose tales of travel show a wealth of fancy that makes his sketches read like romances; Oliver Wendell Holmes, the laughing philosopher, the Silenus of the nineteenth century; Henry W. Longfellow and the late William Cullen Bryant, the sweet singers of the country; Artemus Ward and Mark Twain, humorists—the one gentle as Tom Hood, the other as wildly grotesque as Gilbert-a-Beckett. On the stage, we have Edwin Forrest, who established the American school of tragedy; John McCullough, the dearest pupil of his master; Lester Wallack, the model of light comedy; John E. Owens, the skilled exponent of low comedy; Charlotte Cushman, a very queen of tragedy. As orators, Daniel Webster, Demosthenic in voice and effect; Henry Clay, pure as the rippling waters of his eloquence; John C. Calhoun, whose name is synonymous with oratory; Henry Ward Beecher and Colonel Bob Ingersoll, who blow hot and cold, each with unctious enthusiasm. In invention, we have Edward Morse, the father of the telegraph; Edison, who has accomplished that with electricity which would have bound him to the stake three hundred years ago; Howe and Singer, who have transmuted the dull metal of labor into the gold of pleasure. As heroes, we have Ulysses S. Grant, another Cæsar without Cæsar's pride; rash Ellsworth, of Alexandria; Stonewall Jackson, bravest when hard pressed; Captain Hall, who sought to advance his country's honor over the ice fields of the North; and Henry M. Stanley, who surpassed the feats of Livingston over the burning plains of Africa, and cried to the newly discovered waters in an American's voice, and looked into the face of kings who had dreamed the world circled around them. But there is no need to spread out a lengthier roll. You will yourselves call to mind hundreds of prominent leading names that belong to men and women the peers of any in any country. In the arts of peace and war, in science and literature, in mechanical invention and political economy, the American is continually pushing ahead.

Let me particularly call your attention to the advances that have been made in the practical pursuit of agriculture in this generation. Imagine the feelings of any of our great-grandfathers set down, say in the Sacramento Valley. He had gone to sleep when it took little less than a month to garner the harvest, and the grass that had been cut on his grave was mown by a sickle the shape of the new moon. Steam, as a motive power in the field, was not dreamed of. In place of the tugging team of oxen, plodding across the newly-broken ground, furrowing the earth's face as slowly as time furrows ours, he sees the work done by an untiring though panting machine, the goad turned into a coal box, the yoke into bands and pullies, and the low of the "patient ox" into the shrill whistle of the engine. I know this is rather typical than real, but the principle of advancement is correct, though this particular instance may lack applicability. Let us, then, take a more pertinent example. When our grandfathers were boys and our great-grandfathers were men, the harvest season came in and went out something like this. You must recollect, of course, that California was not thought of, and that not even the most prescient of seers saw such a body as the State Agricultural Society of California an embryo in the womb of time. As virgin July waned and leonine August drew near, the yellow fields were scanned, and when the ears were heavy and the grain full and dry,

the men were sent out with scythe and stone, the reapers spread themselves in a string, the scythes went singing over the stubble, and the swaths fell in rows, regular and exact as so many regiments. The scarlet poppies and hard-headed docks fell alike before the sharp blades; the field mouse ran frightened and trembling through the stacks, whilst its nest, no bigger than an orange, fell with the poppies; the mottled snake glided into the uncut patches, and the green toad sat still and met decapitation like a hero. After the reapers came the gatherers, who piled the crop into convenient bundles for the sheave-makers, and after the gatherers came the binders. Deftly taking a mass of pliant straw, they separated it in twain, placed head to head, picked up the bundle in their sun-browned arms, and bound it close with a sudden twist. The sheaves lying all around were then placed in shocks, butts all to the ground and heads all pointing as they grew. The sun always shone brightly on these shocks, and the farmer's dog, guarding the men's clothes, was always to be found lying by one; whilst the children, free and freckled, played at keeping house in another. Here, too, in its welcome shadow, came the mowers for their mid-day lunch—home-brewed beer, cold meat, yellow cheese, and close-grained bread. Here, too, they flocked when the sudden thunder storm rose up, and the black rain-clouds blotted out the sun as if chaos indeed had come again. The clouds flew down to the west, however; the sun shone out again; the drops sparkled on the hedges and tinkled gently on the hollow straw; the scythes rang under the bones, and work went on once more. The rakers came, followed by the master's eye, to gather the dropped bunches, but left here and there a chance head or two for the gleaners, just for all the world as was done in the days of Boaz and Ruth. From the shocks were builded the mows, the laying of the circles and the building of the edifice being no mean art, I assure you. Here the grain lay ripening until the time came when the great wains were driven into the field, loaded, roped up, and sent creaking down the lane to the yard to be sacked. Threshing boards and flails are brought to work, the barn resounds with lusty blows, the straw is bundled and stowed, and the piles of filled grain-sacks rise up to the very rafters. Then, when the wind blows freshly and dry, the winnowing sheets are spread out, the sieves are shaken, the grain falls like dust down, and the chaff is driven by the wind. Garnered once more, it is kept until sold to the merchant or ground for family use. How different the culture, gathering and disposal of grain is to-day I need not waste time to recall; to tell you of double crops, of headers and reapers, of steam threshers and winnowers, of grain cut, cleaned, sacked, sold and paid for, all on the field in one day.

But to make the contrast all the more striking, and as an interesting review, let me take you back along the avenues of time; let us be intensely retrospective and stand looking close to that era when there was the beginning of all things. This time, too, we will not confine our attention to one particular branch of husbandry, but glance at its origin and progress as a whole.

There can be no doubt that the origin and progress of agriculture are nearly identical with those of civilization. The very instant a man begins to husband the gifts of the earth, and to till that he may garner, that very instant he ceases to be a savage. Think over this yourselves, and you will find that the nations of the earth to-day are advancing in civilization in exact ratio to their advance in agriculture.

The savage nomad is pitted against the settler, for the growth of settlement means the decadence and extermination of nomadism. The breeding and rearing of domestic animals came first. It was Cain, the elder brother, who was a tender of herds. Abel, the younger, was a tiller of the ground. Land was primitively only valued as it served to keep herds, and as soon as this section of country became dry or was nibbled bare, a migration of family and flocks took place to the next green spot. So it went on with our wandering progenitors—a restless, unsettled life, a never-ending setting up and folding of tents, a careless, bright, gypsy-like life that developed a hardy, free, half-predatory race, and which brought them in no way nearer civilization. Between the Bedouin of Anno Domini eighteen hundred and seventy-eight and Father Abraham of Ante-Christum two thousand there is no difference.

In the process of time, however, some son of Adam, more observant or more stable than his brethren, noticed that the banks of certain rivers—the Nile, perchance, among them—after the overflow had subsided, became green with the sprouts from grain and nut brought down from the uplands by the river. Observation led to imitation. The crop was found to be insufficient and insecure, so himself gathering a store of seeds, he bided until the ebb took place, and then wading in the receding tide, “cast his bread upon the waters,” which left it upon the soft soil beneath, and where it grew and appeared “after many days.” This was tilling in its infancy. It might have been some descendant of this very man who, seeing that the precarious produce of these overflowed lands was insufficient to meet the wants of a rapidly increasing population, set his wits to work, and decided to see what the dropping of seed into broken ground would result in. But how to break the ground? To scratch a long line would be the simplest way. So a pronged stick was used, until some happy individual hit upon the idea of using a larger fork, and pressing brute force into the service. The forked top of the nearest tree was cut off; one branch, five or six feet long, was left for the beam; the other, two feet long, was used for the share; a couple of oxen were attached to thongs, and this was the first plow—the same plow that is used in this very year of grace in Asia, Africa, and in some parts of Spain and Portugal. We English speaking people have not much to boast of either, for it was not until the eighteenth century that one Jethro Tull persuaded British farmers to use iron in plows.

There were but few, however, who became agriculturists, because there were but few who preferred quiet, steady labor in the fields to an untrammelled, migratory life. So, with a very strong appreciation of the good things the earth could afford, but with a still stronger disinclination to work for them, they impressed the captive into service, and became task-masters and slave owners. Under this condition of affairs, it was not surprising that agriculture made no progress from the time of Moses and Homer to that of the Crusades. When I say agriculture, I mean husbandry as old Lysander knew it, who

“Asked if in husbandry he aught did know
To plow, to plant, to reap, to sow.”

In the care of herds and breeding of stock, the ancients were more nearly on a par with us, but “blood” was not esteemed. I should

have to claim your attention all day if I were to trace the worship of Ceres and Pomona step by step with the history of their devotees or recreants, and as my wish is to interest, not to fatigue you, we will, as we well can from the present lofty standpoint of history, take in whole centuries at a glance. From her establishment to her decay, Greece paid but little attention to agriculture. Rome thought more highly of the art, and her old writers were authors of works full of modern practicability. The Gothic age came, the age of the Goths who despised agriculture as heartily as they loved feud and loot; who reversed the gentler teachings of the Master, and turned plows into swords and pruning hooks into spears. Europe lay in one long summer fallow, a fallow that lasted until the Saracens came, and brought irrigation and cultivation with them. Matters agricultural, so important to the prosperity of the country, looked brighter. The soft arts of the field were practiced. Even the Hun, the Scyth and the Slav began to till and keep their own flocks, instead of stealing their neighbors'.

Come we now to England under the feudal age—an age when might was right, and the shadow of castle walls kept every poor man's prospect dark. Agriculture improved but little during that time. Leases were short; tenants were dispossessed at a nod; and as rents were usually paid in kind, the man whose ground yielded largely had to pay an increased pro rata. The consequence was that the hard-working fief-holders cared only to gather or keep just enough to pay the rent and keep themselves. Gradually, very gradually, proprietors came to see that long leases and fixed rents were advantageous; but even under this healthier treatment, agriculture in England, as indeed in all Europe, was at a low ebb. Wheat was grown but little; rye, barley, and oats were the chief grains, and even the aristocracy knew few esculents but these. It was not until the days of polygamous Henry VIII that any salads, any carrots, or other edible roots were known in England. A lettuce on Queen Elizabeth's dinner table was as much thought of as the absence of vegetables from any of ours would be to-day. Meat was abundant, because cattle grazed at will over most of the country.

But better times were coming; the horizon was already growing brighter; wonders were accomplished, and a new epoch was commenced. In a little German town such a protest was made as startled every potentate, and tore down the black curtains of centuries. Martin Luther arose, that strange possessed man, in whom all progress was embodied, and who earned for himself the glorious title of "the monk that shook the world." Wycklyffe discovered the use of types, the printing press was set up, the "art preservative" cultured, and ignorance dispelled. A brave Italian sailor set out on a voyage more venturesome than that of Sinbad, steered his rotten ship due West, and discovered a New World. The death blow to Feudalism was struck, and from that day agriculture began to look up—in fact, modern agriculture may be said to date from the invention of printing. Books were written on the subject, and though many of the essays were fantastical, some of the suggestions were thoughtful and judicious. Indian corn and potatoes were brought from America; the red clover and turnip were introduced into England; and the same Jethro Tull of whom I have spoken proved himself the Luther of agriculture! His experiments occupied the first years of the eighteenth century, and it was only in seventeen hundred and

thirty-one that the plowing of lands received proper attention in the mother country. Then the Durham and Alderney breeds of cattle, and the Leicester and Cotswold breeds of sheep came into notice; and since eighteen hundred the progress of agriculture has been so rapid as to outstrip all the preceding triumphs.

For a while America was content to follow the agricultural practices of Continental Europe, but now, as I have said, she points out and leads the way, and can furnish bread and meat for the civilized world. The substantial triumphs of this country have been in the mechanical departments, and though I have generally referred to the advances made, I cannot refrain from giving a more detailed list of the improvements due to the skill, and genius, and energy of the American. He was the first to reduce the weight of the plow; the first to use steel shares; the first to plow Indian corn. The reaping cradle is American; so are horse rakes, hay tedders, fanning mills, threshers, headers, potato diggers, corn huskers, etc. The catalogue is too long, for in axes, scythes, hoes, spades, nearly every instrument of farm and manual labor, in fact, our manufacturers show decided superiority. The American farmer, and the Californian in particular, plods along in no one furrow, but strikes out boldly across untrodden fields, and walks in unfrequented paths. He experiments with the ardor of the alchemist and the boldness of a Frankenstein. He impresses the very elements into his service, and would as soon reap his crops by electricity as by steam. If some untrammelled spirit discovered an aero-electric seeder, there are a thousand farmers in this State who would have their own battery and balloon skimming over the fields at tilling time. He has fought against water and for water. The rush-fringed river lands have been made to yield, and the sea-like steppe and grassy waste are covered with his flocks. His solid, humdrum assiduity is less perhaps than that of his fathers, but as a clear-headed man, as free to act as to think, he has no superior in the world. The American farmer has made his mark, and has, in the words of Horace Greeley, "accomplished much, resulting in beneficial improvement of boundless scope and promise."

But in the face of all this, it has been reserved until this late day for the farmers to meet with an opposition, infamous in its conception and destructive in its tendencies. They are told that all these improvements to which I have referred, and these advances that have been made, all these inventions that have been perfected, must stand still; that the use of agricultural machines and instruments, labor-saving apparatus and farm attributes, must be given up and destroyed, and that the farmer of the nineteenth century must go back to the time when plowing was done by a forked branch from a tree, and this at the insolent demand of roving, plundering, thieving bands, sent from foreign lands to assist as far as practicable in destroying our free institutions—enforcing a living from the honest and industrious—their only claim being that they are of the tramp persuasion. Already has the torch done its work in our country in the ruthless destruction of unoffending agricultural implements by foreign emissaries. But I thank God, from the bottom of my heart, that in Limerick, Ireland, the county will have to pay \$6,805 as damages for the burning of barns and ricks, and smashing of gates, which the peasants indulged in by way of protesting against the introduction of agricultural machinery.

Heretofore California has been happily free from the curse of dem-

agogism, but recently factious and seditious parties have formed, composed of unnaturalized aliens, with no sympathy in common with our country, or its institutions, desiring its destruction and plotting against its peace and prosperity; whose ideas—I will not call them principles—are communistic and socialistic in their tendency; who, being too lazy to work, will not allow any one else to do so; who, starting out with the announcement that the world owes them a living, refuse to present their demands for the obligation in due form, but proceed to steal it. The rabble leader has mounted his platform, that should be his scaffold; strife has been engendered, and the red flag of the commune has been flaunted in the face of the bright sun. True, the blemish on the otherwise clear horizon is yet only as large as a man's hand, but who can tell how soon the heavens may be blotted out by the terrible clouds that shall deluge this fair country with blood? I pray God such a fatal storm may be averted!

Gentlemen, I feel so strongly on this question that I can scarcely trust myself to speak on it. It does seem so monstrous that here, where labor is better paid than in any other State in the Union, and consequently than in any other portion of the globe, that here where capital is not arrayed against labor, that here where the rich do not grind the faces of the poor, and oppress the widow and orphan, that here, of all places in the world, in free California, dastardly communism should be preached and endeavored to be put into practical effect, seems to me a heinous sin, a grave pity, and an intolerable shame! If capital grows timid, who are to be blamed for it? It is true these frothy aliens who have nothing to lose, are in part the guilty ones; but what shall we say of those from amongst ourselves, who simply for political effect and in order to rise into power and place, have been the educators of the educator of the people? These boldly declared that corporate power had no rights that any one was bound to respect; that while three or four men in their individual capacity were safe in the enjoyment of their property and accumulations, that combined as a corporation, their interests were liable to confiscation; that aggregate capital must be destroyed; that vested rights were not vested rights if the mob saw fit so to will, and that money as capital was the enemy of mankind, but offering no remedy to take its place! It is a fact that for the last fifteen years there has been a constant antagonism erected upon a basis of imaginary burdens borne by reason of the construction of railroads. These imaginary burdens have been made the subject of comment by newspapers inimical to corporations, until the condition of affairs brought about by the sand lot orator and his followers has been the result. Brutal, disgusting, infamous as such a leader is, we feel at times like apologizing for him on the ground that the *virus* exuded from himself and his satellites has been embodied by absorption, the result of the teachings of prejudiced minds on the stump and through the press. When the sand lot missionary talks of applying the torch and letting loose the demon of destruction upon corporate property, he is simply reëchoing the sentiments of those who boast of their cultured minds and ability and knowledge as expounders of public opinion. The trouble is that these sand lot reformers are apt scholars. The views of the cultured Communist and the rough, uncouth advocate of the sand lot, are similar, only with this difference: he has a brutal way of giving his form and utterance, while his mentors

express theirs with a little more show of refinement. These things are a disgrace to the State; and instead of inducing men of capital and means from abroad to come here and build up our manufacturing interests, it has the effect of keeping them away. The cry is for employment of the unemployed. And a remedy is asked for. We can give it. Stop the gross, infamous and uncalled for attacks upon corporate property and corporate interests. Stop the attempt to enact laws which in the application of their provisions are tantamount to confiscation of property, simply because it belongs to a corporation. Stop the unnecessary and libelous attacks that are being made upon capital. Give capital a chance to expand, not to contract itself. And every one but a natural born idiot knows full well that a menace, a threat, and an intimidation aimed against capital is the motive power that closes its doors against any attempt to induce it to come forth and disburse itself. The attacks during the past few months against capital and corporate property and interests have been the means of preventing enterprises from being entered into in this State that would have given steady employment, for not less than two years, to not less than ten thousand men. What does capital care? It closes its volume of profit and loss; closes it tight; puts wings on either side, and flying off lights upon some other place; opens its pages and setting to work again, we lose what another locality gains. Capital has been doing that for some months. And who are the sufferers? The unemployed, whose want of employment is made more secure and certain. Let this war upon capital, and upon individual property and corporate interests be kept up and maintained a little while longer, and the streets of our cities will afford magnificent avenues for grazing cattle.

It seems to me there is a responsibility just one step in advance of the brutal ruffians of the sand lot. If there is any reason for the cry of hard times, who are responsible but those blatant mischief-makers, who fish in troubled waters and squeeze the dotish crowd that follows for a livelihood? If public securities seem shaky, is it to be wondered at when the broadcloth, white-shirted conspirators are allowed to cry "confiscate," and those "sans culottes" to yell "hemp" unheeded, and flourish the incendiary's torch unextinguished? Oh, for a new St. Patrick to rid us of these reptiles!

Great as has been the assistance lent to the hand-maiden Agriculture by the tamed giant Steam, let us not forget that much is to be said of those who have taught him how to walk straight, to run hither and thither, to fetch and to carry.

The farmer all over the world owes much to the railroad, but the California farmer, in particular, is indebted to the iron horse, and to those who stable and harness him. Those parallel lines of rails stretching from the mountain peak to the sea-shore, are the unbroken links of a majestic chain that binds the inner to the outer world, that makes the fastnesses and corners of this great State of ours accessible, valuable and near.

There is here something peculiarly bold and grand in this annihilation of the impossible, this overcoming of difficulties, this practical decrease of distance, this connection of the center with the circumference. Vast in extent and geographically diverse as California is, scarcely a locality exists to-day that is not within easy communication by railroad with the metropolis. A network of lines is already spread over the country, and the years are few indeed before the

ramifications and branches will reach every spot. The great heart of enterprise beats strongly, the arteries throb with vigor, and the capillaries will soon be as full of life and motion. The railroad system of California is like one of its own oaks. Its roots are firmly fixed; its trunk is sturdy and steadily growing in girth and solidity; its branches, however far they may stretch, are flourishing and green, whilst the new twigs are healthy shoots of a healthy stock. In the grateful shade of this tree there is prosperity, especially prosperity of the field, and the broader its burgeons, the greater our gain, my gain, the State's gain, your gain. Let the earth teem and the means be wanting for conveying the supply to the market of demand, and it might as well be barren. Let the wheat fields glow and whiten in the beneficent sunshine, the woolly herds ramble over a thousand hills, the fruit trees bend under the weight of their plump products, but let the difficulties and cost of transportation be overwhelming, and the best crop that God ever gave does not mean a repayment to the toiling man. In the break-neck race for a living to-day, one cannot afford to be severely handicapped. Gentlemen, it must be a fair field and no favor, or you are distanced on the first heat. There are malcontents who will see no soul in a railroad corporation, and there are irreconcilables to whom the very name of a railroad company, and above all that of the Central Pacific, is the *matador's* scarlet cloth itself. Thanks to a little common sense, and a sentiment of just appreciation, I am not of that number, nor do I for one instant count you as holding a place in these disaffected ranks.

I look back a few years, and I see California separated from the rest of the United States by an impassable barrier, a double barrier; nay, more than that, a triple barrier; first, that of a lofty range of mountains, with its cleft sides the home of wild beasts; with its crevasses deep as Dante's Gulf of Time; with its cañons washed by unknown rivers, and its peaks hoary with unmelting snows. Next, that of a desert, white with the bones of dead men and salt rheum; and next, that of a second range of mountains, throwing its jagged edge almost up to the stars. Brave hearts on the other side crossed the Rockies, and braver hearts on this side climbed the Sierra, and both reached out to grasp hands in the desert! That clasp of hands did more for California than the discovery of gold. It bound the East and West together; it brought us the bone and sinew of the country, the settler; it made us brothers where we were before but strangers; it has placed us on a competing scale with the rest of America, with the rest of the world! All honor I say, then, to those three or four Sacramentans who risked their substance in this noble work; who braved continual abuse; who struggled against fearful odds; who bore with misrepresentation and coldness; who, seeking aid in San Francisco, found none; who, looking for countenance there, found but one paper, and that a weekly, which had the justice to put their claims honorably before the public; who, as simple business men undertook and carried through a scheme which the boldest speculators shrugged their shoulders at; who were at once their own explorers, capitalists, workers, engineers, and examiners; who built a road which is to-day the wonder of the traveling world; all honor to Leland Stanford, to C. P. Huntington, to Charles Crocker, to Mark Hopkins, I say; and to those who are left, I wish from the bottom of my heart all profit too, for the plain reason they deserve it. Out of that remarkable quartet, one has been taken, and I never mention

the name of Mark Hopkins, or hear it mentioned, without feeling a sympathetic pang as though the death of some near one were brought to my mind. It springs from that sentiment which drew all who were acquainted with the "silent partner" to call him "Uncle Mark." Most of you knew that small figure with its homely clothes, its thin face, quick eyes, gray beard, measured gait, and low-pitched voice. His character corresponded with his plain, outward appearance. He did unostentatiously the work of three ordinary men; was as honest as the sun; affected no generosity, but did good in secret; was happy when at his post; never intruded his opinions, but when they were asked gave them with a weight and earnestness that always left their mark. The monetary concerns of the vast company were safe in his keeping, and it surely may be said of him that he did his duty.

The body corporate that grew out of the meetings in that little room so near to us gathered here, had Stanford for its clear, intelligent and able head, Huntington for its far-moving, untiring feet, Crocker for its energetic and hard-working body, and Hopkins for the steady, plodding hands. Unlike the image of the King's dream, however, all the parts were of the same material, intimately welded together, and the hands of Uncle Mark Hopkins were of the true metal, unstained while here, and now, I believe, most thoroughly purified.

But all this, you may say, does not particularly concern us; the construction of a transcontinental railway is a fact of general interest, and except as to chance passengership cannot intimately affect our interest, comfort, or well-being. Allow me to apologize for so doing, and then contradict you. The construction of the Central Pacific has affected, does affect, your well-being, comfort, and interests; I mean that of each of you. It is a question of simple argumentative decision. Let it be granted that the overland line has done what I have endeavored to show it has done—made California an intimate part of the Union—and the inference is obvious, I think, that the opening up of our internal resources has followed as a natural sequence. Means of neighborly communication would have existed and have been improved, of course, but to the trunk are due the branches, to the parent the children, to the fountain head the streams of travel.

The railroad system of California has sprung from a common center, and if it is to the extended character of that system that we all owe so much for convenience and saving of time and money, is it not clear that the formation, existence and action of the common center affects us all individually?

How are the farmers of California situated to-day with reference to railways? Looking up to the far North we see our sister State gradually being drawn closer to us by Henry Villard's Oregon and California Railroad. The men of Del Norte, Modoc, and Siskiyou will soon feel themselves in and not out of the world. A little south and we find the Shasta Valley and Cloud River farmers taking advantage of the Oregon division of the Central Pacific Railroad. Butte, with prosperous Chico, Yuba, and Phoenix-like Marysville, are passed and Sacramento is reached, whence is opened all the world. Looking west we see Sonoma, with almost every town a railway station; up Napa Valley the train stops at the farmer's very door; while Lake and Mendocino are soon to be joined in the iron bands of the great brotherhood. Nearer to us are Solano and Yolo

Counties, sending their stock and crops by rail to market; whilst to the east El Dorado is reached by the Placerville and Sacramento Valley Road. Folsom City is visited, and the people of Placer and El Dorado are brought within a few hours' ride. Down there at the bay they have made the face of the country look like a checker board. The products of Marin, from point to point, are brought over Latham and Shafter's venture, the North Pacific Coast Railroad. Peter Donahue, one of the pioneer princes, has joined the sea breezes of San Francisco to the hay scent of Cloverdale and the aromatic perfume of Guerneville's woods; whilst from Martinez to San Pablo, San Pablo to Oakland, Oakland to San José, San José to Redwood City, Redwood City to San Mateo, San Mateo to San Bruno, stretches an unbroken circle of communication. Then looking south until the eyes are almost dazzled in the glare of a hot, sun-scorched, strange country, and keeping away from where the train thunders along by Monterey and Santa Cruz, its thunder answered by that of the surf-crested sea, we see dimly stretching away in the distance that wonderful Southern Pacific. It passes the wheat fields that ripen in the level lands of the San Joaquin, makes a city of Fresno, creates a town at Visalia, puts life into Bakersfield, almost puts life into the dead valleys of Kern, climbs over and crosses through Tehachipa, looks in upon Ventura, stirs up Soledad, infuses something like sprightliness into sleepy San Fernando, and makes Los Angeles ring to the tune of "The World Moves," played march time.

Santa Monica and Wilmington and Anaheim are heard from; and then away by the Temescal Mountains to red-tiled San Bernardino, through the Yucape Valley, scaling San Jacinto Peak, and then plunging into the dismal depths of the Coahuilla Desert, and halting only on the further banks of the million-cañoned Colorado. To see the future of this line would need the donning of the prophet's mantle indeed. It is a future bright with a silver lining from the unwrought bonanzas of Arizona—a future laden with the riches and fruits of Mexico itself, odorous from spice groves and coffee plantations—a future that shall wake echoes in "banquet halls deserted" since the high-browed Aztecs died out—a future that bears with it the promise of Texas and Arkansas made neighborly, of joining us with a new undivided South, of being the second strong arms to reach across the continent in an embrace that is inter-oceanic.

Railroads are one of the four synonyms for progress, for the progress of the world is due to four great powers—muscle, mind, money, and machinery—and all of them have their fitting representatives here to-day.

This State Fair means a little more than the display of agricultural products; it means the gathering together of every available evidence of California's advancement. The breeding and improvement of stock are, of course, placed prominently on the premium list, as, too, are the improvements that have been effected in agricultural machinery; but every hoe and household implement, every specimen of textile fabrics, every proof of mechanical skill, are also given attention to, whilst the fine arts, philosophy, music, viniculture, chemistry, mineralogy, field sports, military tactics, trials of speed and endurance, are not forgotten. On the grounds and at the pavilion is to be found everything, from a cheese to a trotting race, from an oil painting to a header, from a la crosse match to a collection of metals, and from a platoon drill to a plate of figs. The State Fair

is in fact the World's Fair, for California is a world of itself, whether considered from a climatic, or cosmopolitan, or scenic point of view. There is no language that does not find its echo here, no product of the earth that cannot be raised, no animal that cannot be reared. It is a babel of tongues; the frigid and the torrid mark our borders; the Alps are surpassed, the Sahara equaled. We have everlasting snows and eternal solitudes. There are whirling pillars of hot sand that keep sentinel guard beside ice-cold streams, and the chill-faced anemone blossoms in the same garden with the palm tree. Our mineral wealth has been and is yet the wonder of the world; and our miners the most scientific, intelligent, and persevering. Neither Switzerland nor Italy have such lakes, Surrey and Kent in merry England cannot exhibit such wheat fields, Sicily is rivaled for olives, Spain equaled for oranges, our figs are approaching those of Barbary, our raisins those of Malaga. From the turnips of Sweden to the spices of Cayenne, from the pines of Norway to the magnolia of the "Sunny South," our list extends. Within her four boundaries, mountains on three sides, and the Pacific on the fourth, California presents the world in miniature. To hold the position of Capital of such a State is an honor that should be well sustained, for it is an honor that might satisfy the ambition of the proudest city in America.

Sacramento not only holds this position, but fills it with credit and dignity. I remember the troubles by flood and fire she has experienced, and I see her passing through the fire of affliction purified, and raising herself literally out of the waters of tribulation. From Sutter's Fort of eighteen hundred and thirty-nine to now is not a great lapse of time, not forty years, yet between that adobe building and this city there is the ordinary growth of centuries. Wealth, refinement, and natural advantages have made Sacramento one of the handsomest cities in the State. A city of homes, her streets are lined with the perfection of residential taste. Mount to the top of the dome that glitters above us, and what luxuriant avenues stretch away in shadowed perspective, what floral colors meet the eye, what architectural taste everywhere shows bright through the groves of living green! It is a sensuous pleasure to the sight that a nearer investigation only enhances. The sun woos you ardently, it is true, in the summer days, but his last and first touches are temperate and gentle. These September mornings and evenings have in them just the right tone to make them enjoyable. There is, if I may use what sounds like a paradox, a crisp balmness in the air which excites without electrifying, which pacifies without enervating.

But not only is Sacramento a worthy Capital, judged æsthetically; it is so from a business outlook. Standing beside the Mississippi of the State, taking toll from the great valleys of California and their subsidiaries, the terminus of half a dozen lines and the juncture of as many more, the base of supplies for the northern interior, and competing for the southern trade, the great product depot for the agriculturists of the foothills and mountains, what opportunities for trade it has, what a commercial center it is!

And your business men are your pride. Astute, genial, enterprising, sharp, patient, honest, they possess every faculty that makes the successful merchant. Quick at a bargain, they are as quick to help the deserving, as the records of that great society, the Howard Benevolent Association, abundantly prove; shrewd in balancing the profit

and loss of an enterprise, they are generous with countenance and pocket to those who show a square wish to get on. I think the way the citizens of Sacramento have acted in connection with the State Fair of eighteen hundred and seventy-eight can be called nothing short of noble. Noble hearts, actuated by noble motives, have effected the prosperous issue of this undertaking. Their owners have kept up that reputation for generous assistance which will be forever associated with the name of Sacramento!

Ere we separate, let me most earnestly thank you all for the honor of an election that gives me the opportunity of being face to face with so many friends, co-workers, acquaintances, and comparative strangers; that enables me, I trust, to contribute somewhat to the advancement of my fellows; that has afforded me, more completely than any other position could, the opportunity of seeing how glorious a stand California is taking in this nation; that brings me in closer communion with the best and worthiest of a State whose past has been wonderful as a romance, whose present is calm prosperity, and in whose future there will surely be

“Peace and plenty
Wherever the bright sun of heaven may shine;
Whilst the honor and the greatness of its name
Shall still be high amongst New Nations!
It shall flourish, and, like a mountain cedar,
Reach its branches to all the plains about, and
Our childrens’ children, shall see this
And bless Heaven!”

ANNUAL ADDRESS.

On Friday evening, September twentieth, the annual address to the State Agricultural Society was delivered in the Assembly Chamber, by the Honorable James McM. Shafter, of Marin County. The Assembly Chamber was nearly filled by an appreciative audience, which represented all of the best elements of society. At eight o'clock President Boruck entered, accompanied by Postmaster-General Key, Governor Irwin, Superintendent Bryte, Director Flint, W. C. Hopping, Wm. H. Mills, F. A. Hornblower, and S. T. Gage. Before taking his seat to preside over the meeting President Boruck said:

LADIES AND GENTLEMEN: I have the honor and the pleasure of introducing to you the Honorable James McM. Shafter, of Marin County, who will now deliver the annual address before the State Agricultural Society of California.

Mr. Shafter was received with applause, and then spoke as follows:

MR. PRESIDENT, LADIES, AND GENTLEMEN: The relations of man to the visible and invisible world have been in all time subjects of the most painful anxiety, the most profound thought, and as to some most material considerations, with the result of simple conjecture.

As to the body, we know that is of the earth earthy; He made man of the dust of the earth. Ashes to ashes, dust to dust, correctly state the origin, nature, and destiny of our physical being. But as to the human soul, there has never been any uniformity of belief. The theory of a personal God, and in man a created soul, has been confronted with that of an all-pervading intellect and power without personality, and an absorption of a portion of that intellect by the individual man. This conflict of opinion is of very ancient date; it came through and agitated for some centuries the Christian Church, and is again revived by the scientists of our time.

We have no occasion to speak of the merits of this controversy. It is enough, for the present purpose, to say in the language of a recent writer, that as to the beliefs of a universal force, and that an emanation from it constitutes the human soul, "it is to be borne in mind that those opinions are held to be true by a majority of the human race." I speak of these theories for the purpose of showing that, in all times, recognizing the fact that his body is formed and composed of the same elements as the air, the grass, and the insensate stones, and having run its course shall return to its original elements, man has always struggled in his beliefs to connect his soul, in its origin, nature, office, and end, with the universe it inhabits. Without arts or civilization men made themselves a part of the universe. The glory of the heavens was theirs, with all their newness. Without knowledge they wandered entranced in peace, and wondered at the new creation. They saw they were subjected to the control of invisible forces, and their emotions became so strongly excited as to

demand the deification of all those unseen powers, in forms which their own imaginations and passions suggested. Such was the origin of those forms of religious belief which, coming from the East, the birthplace of man, still survive in the creeds of to-day. Nor does the soul manifest less eagerness in communion with nature now than in earlier times. Soiled with sin, we seek the forests and the mountains and are made better by their influence. Cast to the earth by our enemy, mortified by our weakness and mistakes, we but touch the earth and, like Anteus, the earth-born, we rebound stronger than before. And if tired at last with contests that never end, with efforts that seem fruitless for good, we retire to country homes, where nature delights us with all her sights and sounds, sweet in the odor of new mown hay—the breath of cows fan the broad brows of our oxen that never deceived us. Jocund is the song of birds, pleasant the rustling of leaves, the babble of waters; and if the thought obtrudes that the turf on which we lie is finally to cover us, we are glad to believe that while of the form that is ours there shall not remain one vestige, there shall still survive in grass and tree and flowers, in form of use and of supernal elegance and beauty, all that once was the habitation of an immortal soul.

This sentimental or esthetic attraction to what we call the universe is intensified by our necessities. There is not a single human want but depends upon the earth and its fruits for its gratification. The poet says of the earth:

"A kind mother is she,
Some bounty she hangs us on every tree,
And blesses us in the sweet air."

If this be true, it is not less so that she is a stern and inexorable mistress. The lazy, lingering lover never can obtain these favors. Ignorance and indifference are not the "open sesame" which open her rocky doors that conceal and protect the treasury of nature. The cry of the weak excites our compassion, of the ignorant our pity, and of the vile our indignation, but it is to the wise and powerful alone to whom is accorded dominion in earthly affairs.

The love of knowledge, which is the true source of power and the consequences of its earliest manifestation, is the basis of a tale so curious that we may not unprofitably recall it. I accept the history as it is told. Man newly created, with no physical wants but were fully gratified, with no knowledge of arts or civilization, or indeed of anything but the objects of sight about him, had heaven bestowed one command and one overmastering desire. For the gratification of this desire, not only the first man, but all his generations after him, have been willing to encounter any disaster with the hope of here recovering something of the lost Eden to make the last great sacrifice of life itself. We are taught that the first man left his paradise filled with terror and despair. Looking to the present condition of human knowledge, and its present masterful control of elemental force, may we be permitted to hope that in his extremity he was not destitute of consolation, and that, sustained by the human love that went by his side, never to know change or diminution, knowing that God had said of him, "He has become as one of us, to know good and evil." With a hope higher as it arose from his disgrace, he went forward resolved in right of that knowledge to achieve victory over his misfortunes, and at last bending the power of nature to his will

to disarm the cherubim of that flaming sword which debarred him from the tree of life.

The first great want of humanity was and is subsistence, the next clothing and a habitation. To supply this want the earth is devoted, and to it the first effort of man was directed. The first man was from necessity and direct command a tiller of the soil, a farmer. Of the various processes adopted by him we have no account; nor indeed is any necessary. He killed an animal for food with a club or pierced it with a spear, flayed it with a sharp stone, ate the flesh raw until, enlightened by accident, the functions of the cook were introduced. As to vegetable food, I have said elsewhere. The girl of the period attended the man in war and in the chase, or if coquettish, half nude, bathed her feet in the stream, combed her hair with a stick, and studied her attitudes and graces in the mirror of a spring. But they suffered a strange want. Meat, fruit, and roots they had on the land, and fish in the water. They must have been subject to peculiar diseases. They felt a certain gnawing and unquiet in the stomach—a salutary monition of nature by which men (and girls) are admonished that it is necessary to work, and cook, and think. They observed that the birds and herbivorous animals were greedily consuming the heads of certain grasses. Thinking that what was evidently good for other animals might be good for them, they rubbed the seeds out of these heads and doubtfully ate them. They found them of slightly saccharine taste, when thoroughly masticated, with the saliva, forming a glutinous mass, and when swallowed supplying their previous want. They had sufficient observation to know that like produces like; they selected the best seeds, planted them with a sharpened stick, gathered their harvests, and sowed again, and soon, throughout a large portion of Southern Asia and in Egypt, the fields were covered with golden grain—wheat, rye, oats, rice, and barley—and the bread made from them soon became food for all in those lands. The Greeks, from their Eastern conquests, brought these grains into Europe, and the Romans not only did the same, but carried them forward in their invasions. About the commencement of our era they carried these grains into England, from whence they were soon sent to Ireland, and later into Scotland. In short, agriculture in rudest forms, carried on with the lowest intelligence, was co-extensive with the human race.

As the call for subsistence became more imperative, so in equal degree arose the necessity for implements, materials, and means with which to facilitate labor, augment production, and accomplish exchange.

Then, as now, the inventive faculty kept pace with the calls upon it. The hollow gourd, the flat or concave stone, the dried indentation in clay holding water, suggested to the potter the culinary vessels, and the substances from which they might be formed.

The worker in metals came next. Iron took the place of wood and stone; indeed, as the most valuable of all metals, it became, as money, largely the representative of value and agent of exchange. Other mechanical occupations followed. The moral sentiments kept pace with intellectual and physical progress.

The adventurous and ambitious souls, knowing that the world was open where to choose, left their native mountain or plain determined to each for himself win a new home and a new dominion, and establish himself its central figure. Impelled by the love of acquisition,

and the power it gave, the story of their possessions to the modern mind seem like fables. They founded kingdoms and established dynasties. The lazy and the idle starved or served. If ye will not labor, neither shall ye eat, was their maxim, and it was enforced. It was understood that the only process by which property could be rightfully obtained was by appropriation or by creation, and that it was the unoccupied alone which could be appropriated. With the just, whether learned or simple, the acquisition of wealth for one's self, and respect for this acquisition in another, were not only correlative, but were the necessary consequences of a law of universal application.

There is no dogma, nor theory, nor device under the sun, upon which men have been so universally agreed as that the right of property underlies all true religion, government and civilization. Without it, deprived of all motive to acquire beyond the most absolute necessity, man would sink into the savagedom from which it has taken five thousand years to raise him. The justice of allowing unlimited acquisition is evidenced by the fact that the desire is universal. No natural, inherent quality or passion is ours without there is lying behind a benign purpose.

If labor overcomes all things, it is only when its past results give impetus to present purpose. Inventions, the work of free mind, have been often accomplished without the aid of previously acquired wealth. The faculty of invention is lodged in that class of minds not directed in a large degree to the special pursuit of gold. But no great works, no great designs, directly affecting large bodies of men, but have demanded as the first condition vast means of execution. All the great wars of the world, waged for either good or evil ends, have demanded and used preëxisting capital to put armies in motion by which they have been prosecuted. It required not only the accumulated wealth of the world, but of that spontaneity or cheapness of production of food alone existing in the lower temperate belt to make the magnificent works now lost in the wilderness of Asia, Africa and America possible. It was this wealth that sent Portuguese commerce to the coast of China and the great Ghengis Kahn, and the gold torn by pious but rapine hand from the Moor and Jew alike sent Columbus into the unknown sea. And in our own days we all know that without capital, labor would starve, commerce would decay, and without at least securing respect for it, not one of those great works which connect oceans and continents, supplying human wants, and if they do not conquer, shake the dominion of time and distance, ever would have been constructed.

We who represent more directly the creating and producing element than that of traffic and exchange, may well spend a brief hour in contemplating our present prosperity, and examining some of the dangers that threaten it. We may fairly congratulate ourselves upon the business condition of our State. We have shared, and are still influenced by, the monetary troubles that, at present, in some sense affect the business world. But we are fast recovering from this influence. Our productiveness is great, our titles are nearly settled, our credit is appreciating, and, as a consequence, interest is decreasing and business improving. The accumulations of capital are very large for so young a community. These accumulations may fairly be divided into three kinds, depending mainly upon the causes or manner of their creation.

In the first place, we have a vast aggregation of wealth in a few hands, the product of mere accident, or the engrossment or absorption of the wealth of others, without the creation of any new value.

There is another class, where, by the aid of previously acquired capital, great abilities have created vast values not previously existing.

The third is that large producing class, which with only that ability and skill which every man of average sense may easily acquire, includes within it all mechanical, agricultural and laboring men.

I know that an attempt to even briefly state the rights, duties and merits of these several classes of men is a distasteful task. I fear that a large number of the citizens of California are in no mental condition to look at such an attempt with favor, but I strongly hope that this audience will at least excuse one made with pure intentions, and which shall be made in temperate language. As to these first two classes, wealth acquired by any process but that of labor, it becomes a source of disorder by the hatred and evil passions it excites. When the turning of a stone, the fracture of a rock, like the touch of the lamp of Aladdin, is seen to pour riches untold into the hands alike of the ignorant and the learned, the lazy as well as the industrious, it is difficult for really sound and sensible, and impossible for men of lower natures, to resist the temptation to abandon industry and economy, for the wildest venture, if there is, in their heated imagination, only a possibility of success at the end.

The existence of these great fortunes in this State peculiarly, and in the nation materially, excites with the ignorant and vile hatred without stint, and with many men of good intentions, a vague feeling of unrest and disgust, as though they had been wronged, without exactly understanding how, and were threatened with danger, the nature of which they cannot comprehend. This feeling of course is unauthorized and wrong. These acquisitions are lawful, and at least innocent.

But what shall we say of those which are the result of mere appropriation by one man of the fruit of another man's labor, without returning him any equivalent, and this under the color of a lawful contract; and what shall we say of the sound sense of a State which, notwithstanding it is quite apparent that the dangerous and desperate classes are constantly recruited by the process, still suffer it to flourish? The legalized gambling indulged in this State adds not one dollar to the wealth of the community; it withdraws from honorable and productive employment a vast aggregate of capacity, and utterly debauches the moral sense of a whole State. I have no words of blame for those who choose to invest their money in the turn of a card, or what at best is the same thing, a turn in the stock market. I leave them to state the moral character of the act, but I ask them would it not be on the whole better—would it not in any event be more satisfactory—to invest such ventures by starting some honest man in business for which he was fitted, or yourself inaugurate some industry, which, by giving employment to only a dozen girls, shall tend at least to save them from a shadow that follows them like a doom. I have said that this class of fortunes excites hatred; those won by stock gambling not only seem to excite admiration, but they seem to exalt their possessors to the rank of gods among men. I have been told that the Stock Exchange resembles, in some respects, the dance of the Eastern Fakirs, and individual performances, that

of the Marabout. And yet often it is to be fairly inferred that the enthusiasm is altogether fictitious, and for no good purpose. The wretch who holds aloft a light to mislead the good ship, freighted with wealth, and bearing in her bosom untold love, hopes, and sympathies, and thus treacherously casts her away, that he may steal her cargo and strip her dead, is only in the destruction of human life worse than he who willfully misleads, by false signs, the weak and despairing in the stock speculations of our day. Poverty, suicide, and sedition follow them, but whoever saw any great industry undertaken by such wealth, by which employment and bread could be procured? And yet such is the justice of our times that of all wealth—this kind peculiarly—in this time of a new world and revelation, has escaped without challenge and without criticism. Sometimes “the wicked prize itself buys out the law.” Young men, remember that in Heaven’s Chancery one honest heart, and in political economy, one dollar earned by honest labor, are worth all these men and their wealth together.

As to that class of accumulations, where capital has been reinvested and enlarged by skill, and the knowledge that gives skill, lands and the great railroad corporations are the most marked examples.

I admit in the largest and completest sense of the expression, that the large holdings of real estate at present existing in this State are not in accordance to the highest interests of the State, and I admit still further that when these estates have been subjected to reasonable skill—have been reduced to actual use, covered with improvements, peopled with an industrious, temperate, and intelligent tenantry—the evil is only diminished, not removed.

But yet there is nothing in the fact of such holdings, nor in the manner of their acquisition, authorizing the entertaining or expressing of personal animosity towards those who have been unfortunate enough to fall into such investments. Those who have entered government lands for speculative purposes only, who do not improve, but simply hold for a rise in price, are not altogether without defense. They buy in pursuance to an invitation given by the people, through their laws. They buy because no man desiring a home at one dollar and twenty-five cents per acre has preëmpted the desired land. The government takes the money. What is there wrong in one’s complying with such invitation, and paying the price? Those who hold under Spanish titles are still less open to assault. Their title is not only honorable, by the terms and reasons of the original grant, but is sanctioned by the law of nations and ratified by solemn treaty. If we do not like these principalities, as they are called, we must not annex any more of Mexico where they exist.

While these considerations by no means make these holdings politic, it seems to me they ought to disarm hatred, and induce a fair spirit of discussion, instead of virulence and malediction.

It is, however, the corporations, and especially the railroad corporations, which receive most of the abuse, of which some portion of the public has relieved its overcharged heart. We are all, I trust, for holding these bodies to the full discharge of their duties, arising from their character and contract, and in doing this I hope we are willing to treat them exactly as we treat any other moneyed interest.

The real objection made to these people is, that they made with the government a most excellent trade for themselves, and one which

has turned out not so good for the government. In all their contests with that government, in one of its own departments, the judiciary, the corporations have won and the government lost. The contract, therefore, has been fulfilled. If there is any censure due, it has always seemed to me it should have fallen upon those who constituted or represented the public in making the original bargain. San Francisco, a few years ago, was justly alarmed at the threat of being left on the wrong side of the bay, and indulged in a good deal of hard talk of the railroads, but she has never called her "favorite son," who represented her in Congress, to account for voting away untold millions to the railroad without inserting in the grant itself a condition that the western terminus should be in the city he represented. Having read the speeches of the California delegation upon the question of these grants with great care, and enjoyed the glowing description of Oriental product, scenery, and life therein, I am inclined to think that the odors from the "Isles of Araby the Blest," or opium fumes from the Celestial Empire entering into their brains, caused some of our delegation to forget at least something which would have advantaged us, who live by this western sea. What consistency or justice is there then in denouncing those who did nothing but accept the aid we offered, and confessedly performed their contract? The people are, however, constantly told that corporations are monopolies, and for that cause they are odious. The assumption is without the slightest foundation.

These artificial bodies were originally undoubtedly monopolies. Granted by the king or head of the State, they received and enjoyed privileges from the use of which all others were excluded. It was the personal and exclusive nature of the privilege conferred alone that constituted the monopoly. No such rule has obtained in this country for a long time, and in this State never.

But it is said that the cost of these railroads is so great that the one first built will necessarily become a monopoly for want of competition. This certainly is no reason why we should not have one road, simply because we cannot have two, though it is a good reason why we should not be imposed upon by the one we may have. By the common law a right of visitation, as it was called, was exercised by the crown to see whether the franchise had been abused. This power is, in substance, represented by that reservation of power to the State to so modify the law regulating corporations as to protect fully both the corporation and the public. I speak of these things for the purpose of diverting attention from the wealth of these bodies and the way it was acquired, topics only calculated to disquiet us, and to direct it to their present conduct. The fact is, by listening to insane talk and malicious insinuation, some of us have got into a state of mind that we seem incapable of sensible investigation and just judgment. The capital and skill involved in these corporations should be treated exactly as those of the natural man, as agencies to be used and directed for the development of industry, the carrying on the business of the State, and enlarging the sum of human happiness. This can neither be done by destroying these institutions, nor by delivering the interests which they are intended to promote over to them as a spoil.

Surely an intelligent and honest people can settle all such questions with neither hatred or disquiet. Permit me to close what I have to

say in this connection with a fact, an anecdote, and a hope. I do not say that the people alluded to in this statement were wrong at any time, but I do say that their conduct is illustrative of the mutability of popular opinion, and the necessity for caution in important political matters before action, rather than after. A few years ago a proposition to take one million in stocks of certain railroads, equivalent, as was then thought, to a subsidy for that amount, was submitted to the people of San Francisco, and was carried by over three thousand majority. I venture the opinion that of those who voted upon this question who are in the habit of attending at the sand lots, nine-tenths of them formed a part of that majority. And further, that of those who now assail these enterprises there are not many at least who cannot find in their past opinions and conduct much that requires explanation, and still more that ought somewhat to lead them to doubt the justice of their judgment, past and present alike. Similar experience to that which follows has occurred to scores of you who hear me. Some years ago a Director of an overland road offered me a pass to the East, which I declined. At a convenient time I went with my children. I returned alone, and musing along I fell into observations and reflections upon the vastness of the work I saw—the pluck, the hope, the sometimes despair, with which it must have been prosecuted. By a natural transition I thought of its influence upon the individual fortunes of its projectors; their affluence and power, the vast subsidies they had received, the adulation they had excited, while I, an inconspicuous unit, was simply represented as first-class passenger, with a constantly diminishing ticket. I soon became penetrated with the idea that I was the object of great wrong and indignity, and that a proper self-respect required that I should become a pronounced anti-railroad man and try and get even. I, however, happened to recollect that seventeen years before I left New York on an unseaworthy tub for California; that I paid three hundred and sixty-five dollars for my passage to San Francisco. The disagreeableness of the voyage came back to me; the sea-sickness, the twenty-five days' time, and here I was crossing to and from the same termini, stopping along to see my kinsfolk as comfortable as though I was at home, for one hundred and thirty dollars. It did not seem after all, upon reflection, that I was any great sufferer. Say one hundred millions of subsidy, forty millions of inhabitants; my share, with my children's, ten dollars. I had saved two hundred and thirty-five dollars on my fare alone, in the whole journey about eight hundred dollars. Really my interests seem to be on the side of quick travel and low prices. It is true when I recollected that the steeples on Nob Hill might be higher than mine I was outraged, but on the whole I was content. I should have remained thus comfortable but for one unhappy circumstance, and as it shows the value of the expression of what is called opinion and principle, I will state it. When I got down this side of the mountains a gentleman, returning from the East, who had stopped over, got into the cars. He was well known to me, a man of ability and prominence. He had been before conventions as a candidate for what were once high offices. He had made speeches about railroads, dark and despondent in view of their terrible character and influence. The Contract and Finance Committee he had charged with many crimes. The gross favoritism manifested by these corporations to their friends, in fares and freights, had been duly held up, as

awful influences by which weak men were constantly seduced from virtue, and the worthy and independent as constantly oppressed. The conductor tapped me upon the shoulder, giving me no attention, and my ticket only enough to punch it. My friend, in answer to the call upon him, took from his note-book a handsome, highly colored card, decidedly gilt-edged. The conductor did not press it to his forehead and breast, as the Eastern subordinate might have done, but he did treat its bearer with profound and exceptional respect. His name, and apparently the number on the card, was taken and noted. He was not himself the rose, but he had been in the same garden. In short, my friend was himself, under a free pass, illustrating his own theories. Considering his real merits, his general character, his talents, I looked at him in amused astonishment, and mumbled over to myself:

Everything hath he
That nature or that art deemeth manly
Save an honest heart.

And yet why should we judge him thus harshly? Instead of the insincere, tricky fellow who condescends to all things promising success, let us rather hope that the love of an old home and the gray old parents there, some of those old affections which, thank God, never quite die out with us, impelled him home, and the want of present means to afford the expense had seemed to himself at least to justify an act from which at another time he would have shrunk. My feeling of aversion to the railroad, however, returned, and must always remain until two questions are solved—first, what were the true motives which operated upon the gentleman to induce him to receive a free pass; and second—a purely arithmetical query—how much of my one hundred and thirty dollars went to reimburse the railroad for the expense of carrying this gentleman for nothing?

Go into the valley of the great lakes, to the headwaters of the Mississippi, and in the mounds and tumuli there, judge of the populations which must at some remote period have dwelt there. Go to Central America and Mexico, and view the works of the earlier races; to Egypt and Assyria, where forty centuries look down upon structures the extent and grandeur of which are beyond the imagination, upon a single one of which two hundred thousand men were employed. Look at all the memorials of Grecian and Roman greatness! What vastness of wealth must have been employed, at what cheap price must life and human labor have been held, what a magnificent spectacle of human energy and skill in all the inventive and mechanical arts, and what a vast aggregate of patient and laborious endeavor is exhibited!

Elemental forces have prostrated the great works of antiquity, the gnawing tooth of Time has eaten the granite columns. The gods look down no longer upon worshipers, but upon desolation. Their memories live only in their symbols. But these peoples of the olden time laid the foundations of our arts, civilization, and beliefs. Cæsar's famous Tenth Legion no more truly marched over the *via Romanorum* than does modern civilization over the intellectual paths opened to it by the thought and labor of dead centuries. So let this process of improvement continue through us. Let us at least hope that the little jealousies and hatreds that agitate us will die with us. Fifty or a hundred years hence let us hope that the

great and homogeneous people that will be here will do us all justice, and will say of us, these men who devised and executed, the humblest as well as the proudest, who built up and made this country, that attacked nature, and compelled obedience, that have left us these great bonds of union—these homes, these educational institutions, their friendly feeling toward each other; this exclusive love of *our* country, these white men and colored men, the Christian and the heathen—all who contributed to this end, verily they lived in the time whereof it was said, “there were giants in those days.” They doubtless had their hopes which were disappointed, their hates, their loves, weaknesses, and their crimes. They desired great things, and some at least died without the sight, but we know that their efforts, guided and overruled by a beneficent law, have ended in good.

Happy are those who lived in California at the close of the nineteenth century. Looking down upon their completed work they will see that, despite their misfortunes and their mistakes, they builded better than they knew.

Great as is the aggregate of these accumulations, it is insignificant when compared with that in the hands of the third or laboring class. I use the phrase laboring man reluctantly; all terms which seem to divide or classify men by a reference to their peculiar life, or occupation, had best be avoided. This appellation, however, seems to be so generally accepted that I adopt it. This class of producers, in this State, must have earned over five hundred millions of dollars since eighteen hundred and fifty, and are now doubtless in possession of three or four hundred millions. I am told they have more than sixty millions in the savings banks at this time. Certainly this is a sound and healthy condition, and yet there are many among us endeavoring to convince us that the laboring man is greatly abused and oppressed, and that while all the rest of the world has been making progress he alone has drudged and drudged, without success and without hope.

According to these new lights the world of industry has been hitherto lop-sided, all the profits and advantages have been on one side. That while the laborer has been distinctively such he has been kept in poverty, but full of all charity and kindly feelings, but strange paradox, when he has become rich he has ceased to have the instincts of his original condition, and has lost all interest and sympathy with those who still occupy it. It is to be hoped that neither poverty nor wealth of themselves produce such results. The fact as to his condition is, that he has not only kept pace with those who started ahead of him, but he has closed up the gap which separated him from them. Six hundred years ago the laborer was not, in its present sense, a man. He was a serf, a retainer—he belonged to the estate upon which he was born, and was transferred with it. He lodged with the animals, a stable was his home. He slept on the forage, or upon a bed made of round sticks, covered perhaps with a bundle of straw. His clothes were a sheep-skin, or those of animals taken in the chase. He went barefoot or wore hide sandals tied with thongs. His head was bare of all covering but the unshorn tangled hair. He was not allowed to carry arms. His marriage was directed by his master. His food was what he could get. With a kind master he sat below the salt and cut with his hunting knife, or more probably tore with his fingers, his meat from the common mass. Around his neck was often a collar, marked with his owner's name and the legend of his own servi-

tude. Scott says of one of his characters, that he had a brass collar riveted around his neck upon which was engraved, "Gurth, the son of Beowulph, is the born thrall of Cedric of Rotherwood."

When kings and the nobility could scarcely write their names, the mental condition of the lower orders can well be estimated. At all times oppressive, in some lands feudalism was peculiarly odious. The lord had absolute power over the fortunes of the serf, and sometimes over his life. He could hardly be born; he could not marry, purchase, hold, or convey property; he could not live nor die without such jeopardy and loss of estate as declared and vindicated the right of his master and his feudal subordination. The right called that of the "*primum noctes*" existed in many lands. The bride, instead of going to her husband, became a prey to the feudal lord. In short, the serf was a hewer of wood and drawer of water, a beast of burden.

The God in him often resisted these wrongs, more frequently the nobility of human nature induced the lord to remove these burdens and renounce these oppressions.

It is the task of a Draper or a Buckle to trace the progress and to state the principles of modern civilization. It must suffice us to say, that from that time when the feudal law ceased to be dominant, and the municipal law became so, the physical and intellectual progress of mankind has been unbroken and almost undisturbed.

In all this progress, in all the wealth, power, and happiness it has induced, the laboring man has not only had his share, but he has been preëminently blessed.

As to his present condition, he is the equal before the law with any; his person, his family, his property and highest good are completely under the protection of his State and of its law.

There is no function of government which he may not execute, no privilege which he may not enjoy. Instead of being a serf, he is a freeman, in means, of independent life, of comfort, and even luxury; he has all that is to be desired. No insufficient or squalid garment, no hovel, no privations are his of necessity. His is simply the common lot—to labor and enjoy its fruits.

Turn where you will in the crowded streets, in the quiet country, there you will find the laborer, who is such in fact, in possession of that competence which secures him from the dominion of want. All this he has acquired by increased intelligence, and that skill and prudence which are its product. Every avenue to learning is open to him; the State offers to him the highest opportunities ever tendered to humanity. It is only he who prefers ignorance that retains it. What happier condition can there be than that of him who, having neither poverty nor riches, is saved from care and temptation alike?

As a general proposition, a California laborer is richer, better paid, more powerful than anywhere else, or any other time in the history of the world. I do not include in this statement that large class who, calling themselves laborers, will not work, nor still less do I include those whose misfortunes have incapacitated them to labor. The appeals which these last make, silence criticism and arouse benevolence.

It seems to be supposed that these do-nothings, this tramp brigade, are the natural outcome of the wrong adjustment and distribution of wealth of our day, and that the times, so to specify causes, are responsible for their pitiable condition. Nothing is further from the

truth. Since the earliest times these masterless and homeless outcasts have existed as a material and disturbing element of society. An army numbering thousands followed the Crusaders. Their captain, to secure good faith, on their march stopped them in defiles, and if, upon search, one was found with so much as a penny, he was expelled from the community, and was told to buy arms and fight. In England, three hundred years ago, in Elizabeth's reign, statutes were passed providing for the punishment of tramps and vagabonds. Then, as now, they were the bane of the industrial classes, and whenever permitted fastened and fattened upon the body of the community. In this State they are numbered by thousands, swarming in the cities and infesting the country. The world owes them a living, and a living they will have. Is it quite apparent that there is any necessity for their living, and is it entirely certain that society would not cheerfully excuse them from the discharge of this duty? These people call upon you generally just at nightfall—when it is too late to get any work out of them. They have suffered great losses and have gone through untold troubles. You are afraid of sending away one really unfortunate, and take him in. You joy to see him feed, and you lie down better satisfied—even when you are quite sure he is a humbug—that you have at least filled one empty stomach and have paid tribute to mercy. And when you rise in the morning and find (as was my case five times in as many months) that your guest has decamped with what of personal property he found convenient, you are more disposed to laugh than be angry. How long these people are to insult labor by claiming to be elevated to it, and how long society is to endure, are questions for your consideration and for the action of those to whom you confide the making of your laws.

Will the workingman here permit me to say to him, I am not unconscious of the difficulties surrounding you. I certainly am conscious of the feeling of disgust which sometimes agitates you, but after all is not your condition a good one—have you not health and length of days beyond those you consider more fortunate than yourself? Are you not better instructed, with the rest of your fellows, than has been the lot of man hitherto? Are not your rights as really secure as any one's, and do you not feel a manly pride and exultation in your position and power, which no other class can claim to possess? Are you not conscious that for all this, under heaven, you are indebted to that higher civilization and intelligence which has been worked out in this world by you, and with you, in equal degree by your fellow-man? And if you believe as I do, that there is still greater enlightenment, peace, and prosperity to come, is it not true that past mistakes are as much yours as they are of the rest of these, your brethren, and to secure this glorious future—if it is not on the whole better—casting aside the little jealousies that so easily beset us, to work in concert for these higher ends, and to begin by confiding in our fellow-men, and by observing towards them an intelligent and manly justice?

We must all be convinced there is something out of joint with us. Either our political and social institutions are mistaken, or they have been made to appear so, to a material portion of our community. In the absence of any reason to suppose our institutions are at fault, I am inclined to believe that the present disturbed condition of the public mind is fairly attributable to mistaken views, arising from the

evil instruction with which it has been treated. The basis of man's moral responsibility, and his future condition, has been made to assume so horrid and realistic a form that the natural mental rebound has induced a skepticism which prevents all just examination. In politics and political science we have been still more unfortunate.

One who has no knowledge of finance, nor of the science or history of government, if he is known to be a man without principle and is of evil reputation, if he can make a good political speech, is thought a proper person to enlighten people hungry for solid instruction as to public measures, and the political, moral considerations underlying them.

We are told an anecdote when we want a reason, regaled with a conjecture or a guess when we are praying for a fact, and when all else fails, there is an endless fund of pitiable insinuation, falsehoods and evasions, by which we are supposed to be fully enabled to support the dignity of manhood and to discharge the duties of citizenship.

We ask our leaders for an egg, and they give us a stone; for a fish, and they give us a serpent. Even our grave assemblies, that assume to utter our thoughts and give expression to our intentions, get up in detail schedules of principles, and platforms of opinion, and creeds, and justify their shameless abandonment of them on the ground that they were intended simply as decoys, or to use a phrase furnished to my hand, they were "molasses to catch flies with."

What wonder can there be that masses of men, whose self-respect has been thus lowered, whose confidence has been thus abused, whose honor has been thus outraged, made to appear like those to whom the phrase "liar and thief" would be complimentary, should revolt from their old associations, and go anywhere in search of an opportunity of truthful self-assertion and justification?

One instance of these fallacious teachings I will mention. I do not desire to elevate railroads to any disproportionate importance, but the objectionable proposition was an important one. There was a question made before our last Legislature as to the power of railroads to change their tracks, and it was proposed to prevent such change except upon legislative leave. It looked to an indifferent observer that some thought there was money in the question in the sales of these powers or indulgences. In support of this bill it was urged by two distinguished gentlemen of the Assembly, that after having made the road-bed and put the rails down, that the structure became not only a common highway, but that the title to all the road and all its appurtenances passed to the public in the condition it then was. Under this claim, while the public itself was under no obligation to repair the track from the effect of accident or wear, the corporation would have no right to alter the structure in any respect, to take out or replace a rail, or if the track was carried away by flood it could not be more securely located. If the corporation built a temporary track around a hill while it was driving a tunnel through it, there would be no right to take up the temporary track after it became useless. In short, they could do nothing involving change, however pressing the exigency, without legislative consent. These legislators did not consider it necessary to inform their constituents that these notions were without any support among legal authorities, nor did they seem to consider that older law—thou shalt not steal, thou shalt not covet anything which is thy neighbor's—as being yet

in force. It was necessary to make a point—that was all. What was to be done with, or for the original owner of the land, who still retained the title, and had only parted with the right of way over it; what was to be done with the creditors, the bondholders, and mortgagees, whose debts, representing the iron, the road-bed, stations, the labor of construction, these gentlemen have not as yet informed us. And as to what the State is expected to do with these roads when it gets them, they leave us equally ignorant. And how the idea that subsidies being wrongful diversions of money, raised for governmental purposes alone, to the prosecution of a private business, can be made consistent with the notion or project of the State itself running railroads, we are yet to be told.

According to these theories, every stage coach, its horses, and the stables attached; every steamboat, with all its incidents, would belong to the public, for they were intended and dedicated by the original owner to the public use. Of necessity or convenience I put down some planks for a street crossing and sidewalk, merely lying upon the ground. Now this was incontestably establishing in the public a right to use those planks as long as I chose to leave them there, but what sense is there in asserting that they were no longer mine? Whatever might have been the legal conclusion, the planks came to that “swift ending” which usually ensues when nights are dark and fire-wood and morals are scarce.

These fantastic notions lead the people to indulge in delusions, to a great waste of feeling upon mere phantoms, and weary them of investigation. Most of all they destroy confidence, and throw the honest but uninformed mind into the control of the worst elements of society. That these evil elements are now at work, that they have collected and gained to their side (for a time only we may hope) many good men, we all know. While those good men here are resolved to strike, will they first hearken?

I assume that in the effort now being made to remodel the world that you have felt an inclination and attraction toward, and sympathy with, what are called the new ideas. You are seeking new friends. I hope they will be found worthy, and such as you ought to desire. To make this new connection a safe one, you will of course exercise all the sense and prudence with which your previous experience has endowed you. What has that common sense induced us hitherto to do, in relation to our social and business life? We have always sought that companionship and aid most agreeable and useful to us.

In the larger interests of this life, or the life to come, if we have leaned upon any one it has been one whose loftiness of character has forbid deceits, whose learning has made them a safe guide. As evidences of the possession of such a character, we have scanned his countenance, his attitude, his conduct, and his words. We have demanded of him that justice that reproved, as well as justified us; and that great whole-souled justice and generosity, that while it kept its home looked with love and sympathy upon all mankind. We have often voted for little trashy fellows, but it has always been with the protest that honor belonged only to the great.

I am about to specify some of those dangers with which we are threatened, both in the State and nation. I am conscious that I subject myself to criticism, for the reason that the source of these threat-

enings is of doubtful character, and for the further reason of my peculiar relation to the questions involved.

I conceive, however, that the importance of the topic and the occasion, will be deemed a sufficient excuse.

One of the greatest dangers which this State labors under is the ignorance which exists among what are called the richer or better educated classes as to the nature and extent of republican ideas and institutions. At least we should think so if we believed all that we are told by these wise men who come from the east to instruct us. The old Magi who saw the star in the east, and followed it, did so to tender their worship at the shrine they sought. Our Magi require alike tithes, worship and obedience. It seems to me that those of such august claims, of such profound contempt for our great historic names, and long, deep-seated convictions, should touch our opinions and even our prejudices tenderly and respectfully. Paul found on Mar's Hill an altar to the unknown God. He did not overturn the altar nor treat the superstition with contempt. He followed the heathens' line of thought, and guided and purified their worship by declaring that God to them. What is the tone and language of the new Apostles to the Gentiles? Our government, in its necessity, sold its bonds with the condition that they should be exempt from taxation. The purchaser paid the taxes in the original price. To fully express what is deemed proper abhorrence at this transaction, there are forms of expression imported into public displays quite new to us. Our language seems to have been enriched by new descriptive applications. A very large majority of these bonds are held in this country, and vast sums in the aggregate are held by those who may be denominated as helpless and timid classes. The funds belonging to estates are largely of this kind, the widows and orphans, factory and servant girls, schoolmistresses, the little daughters of our friends and our blood. I do not recognize the justice of denominating this class of persons "lecherous bondholders." The men who, starting from the soil, have built up the State, who have opened up commerce and created industry, who have filled the mountains and the plains with agriculture and beautiful homes; whose children—the healthy boys and the beautiful girls, dropped like the snowflake from the pure sky—it seems to me are hardly with propriety called hell-born and hell-bound thieves and blood-suckers. I do not suppose that thirty thousand voters in this State entertain this opinion; but is it not a serious thing when they act with those who do, and when the chief city of the State, whose very life depends upon its commerce, and its justice and domestic tranquility, occupies its present position? Conscious of our own mistakes and our sins, we may well appeal from these atrocious judgments to the good sense of our fellow-citizens in their saner moments. Above all there is one overmastering consolation. These expressions and sentiments *are not the outgrowth of republican institutions.* Those of us whose ancestors fought upon the right side one hundred years ago, who left their exhausted bodies in the snowdrift at Valley Forge, or fattened with their blood every battlefield from Maine to Georgia, and who have ourselves in turn defended labor all our lives—have assisted to free it in its most degraded and oppressed condition, may well hope to persevere to the end. We will tender the poor our sympathy and aid in all his efforts

to better his condition; we will ask him to give us his aid in our extremity, for we "are not on beds of roses," and, working together, stimulate human industry by securing to its exercise the proper reward, admitting the right of every man to state his own propositions in his own language. I have given the foregoing specimens as illustrative of the tone, temper and exhaustive intelligence of those who demand our respect and confidence when they utter them.

Let us turn now to the more important matters they propose. In this land of ours there has always been a paucity of people. Our resources have been undeveloped from that cause. The want is as fully felt to-day as it was a hundred years ago. At the same time the governments of those countries from which we could expect recruits refused us the necessary encouragement to immigration. To this end they declared the dogma that the original allegiance of a man to the country of his birth could not by any act of his be terminated nor transferred. In short, self-expatriation was denounced. Once a Briton, once a Prussian, always such, was declared to be the law.

In our early colonial history our people rejected this attempt to limit man's right of selecting his own domicil. One of the assigned causes of our revolt against George the Third was that he had refused his assent to the right of expatriation, and we fought the war of the Revolution in the maintenance of our opinion. In eighteen hundred and twelve the question returned. Our seamen were impressed, because England claimed them as hers by birth. Another war succeeded, and a sort of grumbling acquiescence was given to our position.

Nearly a half century later, a man who was not a citizen, having declared his intentions to become such, was attempted by the government of the country in which he was born to be subjected to its service and control. An officer of our navy received him on board his frigate and refused to surrender him, on the ground not that he owed allegiance to the United States, but that he had taken the first step in that direction, and, as having expatriated himself in that act in our favor, was entitled to our protection. Our whole country approved this act of Commander Ingraham, and Kosta was brought or sent to America. When the Burlingame treaty was made with China, this American doctrine was reiterated in the most solemn form and in its largest extent.

To go back entirely or partially upon our former position, as to this right of a man to go anywhere he pleases to seek his fortune, seems to be the general tendency of public opinion. It is true that the exciting cause of this new departure is the presence of one nationality—the Chinese. But to be human is sometimes to be logical; and it is seen that it will be necessary to devise expedients which, while they will have a peculiar effect upon the Chinese, will seem in their terms to apply to all alike. I confess that when I see the possibility of the myriads of the population of China pouring down upon this coast, I am dismayed; but when I see that we found ourselves upon the theory that all men are created equal and are equally entitled to life, liberty of locomotion, and pursuit of happiness wherever that panthom leads the way, I am sorry that the founders of this government had not excepted Asiatics from those men thus blessed; and when we see twenty millions of them dying of starvation in a land where food is so abundant, simply from over-population, I confess I

should like to see some of the waste places of the earth receive them. I confess that my idea of statesmanship requires us to exclude from us all those who cannot or will not aid us in the proper development of our land. Harsh as may be the rule, it may after all be a politic and just one—they must go out from us because they are not of us. I leave out of account all this idle talk about their religion—the nation whose philosopher, four hundred years before the birth of Christ, announced the golden rule, declared a code of morals as universal and as sacred as our own. It is unnecessary to discuss their dress, at least convenient and economical, with our own, often possessing neither convenience nor economy. Their language, barbarous to us and apparently difficult of acquisition, is at least spoken, and according to my observation, written, almost universally by them. Their food seems to excite contempt and disgust among these accustomed to a different diet, and it may not be unprofitable to consider that rice, the main staple of their consumption, the most nutritious of all the grains, is the food of half the human race. It seems to me that none of these things are worthy of a moment's consideration. I do not believe that the effect these men have upon the price of labor is anything approximating what is supposed.

So far as I have known, they receive as much for their labor as white men, in proportion to the work done, and I believe that all employers prefer white labor when they can obtain it. I believe to-day that fifty thousand white laborers, in addition to those already here, can find homes or employment here, did they desire it and were willing to comply with the laws regulating the relation of master and servant. One of those laws is, the servant must work for such wages as his master can pay, and that master should pay such price for labor as not merely supports life, but should be the result of a fair division of profits between the capital and labor invested. How is it to-day? I doubt if the agricultural lands of this State are paying, upon the scale of this fair division, eight per cent. per annum upon the capital invested. I doubt if they pay six per cent. The dairyman is paying within twenty per cent. as much for wages to-day as he paid fifteen years ago. He sells his products, cheese at about one-half, his butter for less than one-half, the price he then obtained. The railroads bring butter and cheese from New York and the States of the West, from the high-priced lands and cheap white labor, and sell them here at nine cents, and fifteen and twenty cents per pound respectively, to the very workingman whose high wages absolutely forbid competition to the California producer. We send our hides to the East; they are tanned, the leather returned and sold in fair competition with California leather. Boots and shoes made from the hides of California cattle are sold in our markets, I am assured, at a lower rate than those made here by white labor. Here are the freights; two or three commissions; perhaps six months' interest, insurance, and all other incidental expenses added, and still the agricultural and mechanical laborer of the East promises, or threatens, to drive us from the market. Still the workman says, "I cannot live like the Chinaman, nor work for Chinaman's wages." I hope to God, my friend, that you may be compelled to do neither; but this condition of things is independent of the Chinaman, and one which demands the serious consideration of both employer and employed. You may get rid of the presence of the Chinaman, though not of his competi-

tion; but you cannot get rid of the competition of cheap labor, of machinery, and the busy hands of your Eastern brothers.

I have met and talked to hundreds of audiences upon the topic of slavery. While I have often found the laboring man not particularly impressed with the moral aspects of the slave's condition, I always found him attentive to all arguments illustrative of the degradation of labor in the person of the slave. The workingman became at last a logician, and resolved that labor should be no longer thus degraded. It seems to me that contact, constant and irritating comparison and hunting up of similitudes between the white Christian, or at least civilized white man, and the Chinese tends largely to lower the self-respect and to degrade the character, to lessen and lower the ambition and standard of the white laborer, and through him the white race. Our tendencies are strong enough already to lapse and decay; we need no augmentation in that direction. It has further seemed to me that the vast numbers of these people, their indifference to life, their fatalism, their undoubted physical force when organized and directed as it may be—a consideration recently stated by a European statesman—deserves serious consideration. Whatever conclusion we come to as to this or any other class of foreigners, we ought at once to understand that this State can do nothing of herself, but must act through the Federal Government alone. A hundred schemes are proposed by men who know nothing about the matter, and who seem never to have heard of the adjudication of the State and Federal Courts, by which all these notions have been overturned. In short, counsel has been darkened by mere words without knowledge. But the present objections are not to the Chinese alone—all foreigners are to be subjected to new terms and conditions. In England and elsewhere an opinion existed that it was dangerous to allow one owing foreign allegiance to own real property. This class of property especially was thought to give the alien an importance and political weight not consistent with public safety. In this country this notion has been measurably adopted, but in this State a more favorable view has been taken. When the alien died his property was liable to escheat in case his heir was a non-resident foreigner. Upon arriving here in eighteen hundred and fifty-five, I found that several estates were about to be forfeited under judicial proceedings, and my first connection with California legislation was to draw and aid in procuring the passage of a bill securing the foreign heir in the right to sell and withdraw the estate. This law is still in force. It is now proposed to confine the right to own real property, to transact or be interested in any business, or to do any labor when it comes in conflict with the labor of a citizen, to citizens alone.

In this day of absurdities it is not surprising that these propositions arise with our foreign element, though it is surprising that as to the prohibition of holding realty some men of native growth concur. There will be no possibility of attracting capital to this class of property. No alien who desires to personally observe the workings of our institutions before naturalization can own the house he lives in. No capitalist from abroad, with cheap money, can loan it upon California realty, because upon foreclosure he must stand still and see it sold for one-half its value, because he cannot be a purchaser. The British Minister at Washington, the Consul at San Francisco, cannot own their consulate nor their private residence. Foreign nations own many of their official premises and residences with us.

These titles are all to fail under this new law. To make or give the idea upon which this proceeds full scope, all foreigners, at least those whose acquisition will be of any advantage to us, are to be driven from the country, and this is proposed to be done by the inhibitions relating to business. No alien can enter into, conduct, or be interested in any business of any kind here. Every banker—numbered by scores—must withdraw every dollar in money—measured by millions—whether vested in banks, loans, mines, or ditches, must escheat, unless the owner will abjure his native allegiance.

A ship of war comes in, and desires to recruit her crew and refit. She cannot buy a rope of a British subject. Nay, if she sends on shore for a crew an alien to her country must be informed of her destination and purpose, and must do the enlistment. If she wishes new armament, or new ammunition, she must trust to the honor of a stranger, an enemy, instead of the loyalty of one of her own nation. Indeed, I do not see why her men must not be taken from the natives of this country, if they offer, instead of her own subjects, for no employment can be given to a foreigner if a native wants it. In short, under the new order of things, we shall only have one further step to take to drive off the ships, and if a shipwreck occurs, as was the case of the *Nerick*, the *Labouchie*, and other ships, we will pillage the ships, and kill and eat the crews, and reach the happy state desired.

A large share of our grain is exported in foreign ships. Will it be a desirable state of things when freights are increased one-half from what they now are, as will be certainly the case from the absence of all competition?

With the characteristic prescience it seems to have been entirely forgotten that there are to be two parties in this rearrangement of the law of nations. The nations from whom we have extorted a recognition of the right of expatriation, and with whom, I suppose, we expect to keep up commercial intercourse, will be likely to be heard from when their citizens are subjected to such fanatical and barbaric treatment. There will be more treaties than the *Burlingame* to be reviewed, and we shall find blows in return for blows. If Mr. Peabody had survived to this new good time coming, he need not have troubled himself with any testamentary disposition of his property. The treasury of the Queen would have swallowed it all. When American ships take our wheat, our cattle, and produce of any kind to Europe or Asia, our treatment of their commerce and citizens will furnish the rule for our reception. Before your grain reaches the foreign consumer it will be so tolled that its California producer will squeal when he hears the fate of his grist.

This matter particularly affects you farmers and grain producers of California. Your produce, already enormous, is to be almost indefinitely increased. Your market is to be necessarily abroad. Anything which disturbs our feelings and relations abroad is, and can be only destructive to your interests, and nothing can more directly produce this effect than the schemes I have attempted to state and expose.

There has been a discovery made among us lately. Some men are too long and some are too short. Procrustes has come with his bed. Some are to be stretched, and some are to be shortened. If the proposition was to diminish diameter or circumference, I should submit without a word, but my head being the best I have, I do not wish to

lose it. It is proposed to limit the amount of property which a man shall be allowed to accumulate.

I know the statement of this intention is to limit the quantity of land, but no man of sense will fail to see the object aimed at is to diminish individual importance, and to do this, by a total sacrifice of all laudable energy and ambition. Indeed, when this sop was first thrown to the diseased mind to which it was addressed, it was expressly stated that the whole estate of a man was aimed at, and various sums were named as the maximum of acquisition permitted.

No one of the slightest intelligence but must see that money in large masses under one control, can be used in a far more dangerous way than can the same value in land. Land, however, was thought most assailable, and the fact of large estates, the heritage of a past generation and people, being retained, it was thought would furnish point to the attack.

It is but fair to give the proposition in the very words of those who make it. Not to criticise this language, and the inconsistency of the provisions of this platform, it provides for a maximum quantity of land which any one may hold or own. These sumptuary laws have been repeatedly tried, and the trial has always been followed by abandonment. All writers upon political economy condemn them, as restraining that exercise of industry and desire of acquisition which, in the great average of human intellects, are the only incentives to labor.

Mr. Buckle treats of these laws as arguing, in those approving of them, such fatuity as renders them incapable of reasoning in regard to them. It is supposed that the intention is not merely to prevent engrossment, but to do so, that lands may be fairly divided among the people, so that all may be provided with a sure source of income and support, of approximate equality in value. The proposed scheme will accomplish no such result.

The quantity or the square mile is no test of either productiveness nor value. One mile is worth half a million, another would be high at a thousand dollars, and their capacity to support life in equal ratio. Besides, there are somewhat less than say two hundred thousand square miles in California, and there are eight hundred thousand souls to divide it among. One hundred and sixty acres per head exhausts the land. If this division is to be had, I object to the man who can pay for six hundred and forty acres, depriving those other men of their just share simply because they cannot pay. Under this new system the bloated capitalist, who has his six children and a wife, may own five thousand one hundred and twenty acres of land, while his impecunious neighbor, with a dozen children, can own no land whatever. In short, two hundred thousand reformers will own all the land, and these two hundred thousand will be composed of say forty thousand men with their attendant families.

The really poor man would at last find himself with Dickens' character, all in a muddle, and as far off from comfort as ever. That there is no desire to obtain lands for the purpose of making homes, to the extent of making it necessary to disturb present holdings, is evident.

There are hundreds of thousands of acres of good land in this State at this day subject to entry at government price, and there is a large number of thousands offered at a price but little in advance of the

government price and at a far less price than these lands proposed to be confiscated would bring.

There is another consideration which seems to have escaped attention. We live as yet under the ligeance and laws of the United States. A State is forbidden to pass any law, or create any Constitution, in violation of any treaty or of the Constitution of the United States, or of any laws of Congress, passed pursuant to such Constitution. Now the Constitution of the United States forbids the States from in any manner impairing the obligation of contracts, and the treaty of Guadalupe Hidalgo secured the Mexican owner of land, his heirs and assigns, in the full ownership of the lands granted him.

Whenever, therefore, this State takes any land, or undertakes to seize it, and dispose of it without the owner's consent, except for the public use, it will be met at once by the law of Congress providing for a rendition of its lands and its patent, conveying the land to its purchaser with the clause that such purchaser shall have and hold to him and his heirs and assigns forever. The decree of confirmation of the United States Courts, and its patent of Mexican granted lands, is to the same general effect. How the seals are to be raised off these bonds, I am unable to see, and how the policy of the Federal Government and its solemn conveyances are to be defeated by the present fanaticism is one of those questions the answer to which we may safely abide. It might be some little relief to the fatuity of these plans if they were to be accomplished by moral and intelligent means. Laws are intended to be guides to conduct. They should be known and be the result of investigation and experience.

We have settled upon biennial sessions of the Legislature for the purpose of preventing sudden changes in jural relations, and we elect grave, learned, and experienced men to interpret them that they may be fixed. The proposition now is to pass a law and if it does not suit us to tear it up and pass another. The destruction of all society and business must be the consequence of such a course. Ignorance and passion will constitute the enacting power, and terror, dismay and ruin the effect of such laws. The act of log-rolling, as it has been called, one of the highest criminality, is especially urged over the entire country. Pool your issues. What is it but willful perjury, and the worst of political crimes?

There are ten measures, before a legislative body of one hundred, and each measure has ten supporters and ninety opponents. One would suppose, with nine-tenths of the body opposed to each measure, they would all fail, but the issues being pooled, they all pass. Our fears are appealed to. In a land professing to be governed by law, with no hindrance to the majority fixing and making that law represent its opinion, we are distinctly told, that if there are not votes enough to vivify the new opinions then violence is to be resorted to, and the majority are to be coerced into obedience, and I am quite sure that no one will be disturbed by these threats.

I am quite sure, in case these malcontents should be so unfortunate as to attempt the fulfillment of their threat, that the power of this people, acting when possible always through the forms of law, will bring these attempts to naught, and the offenders to condign punishment.

Gentlemen, though connected with farming almost all my life, I am fitter to take instruction from you than to confer it. I have experienced most of your difficulties and may have had those of which

I trust you have had no experience. I have deemed it not inappropriate to direct your attention to some of the topics common in interest to all who labor. I have done so because you of the farm, the shop, and of every place where muscle guided by intelligence is found, are that body upon whose conduct depends the future of our State. The worker—the country worker—is of calmer mind, of more dispassionate judgment; he is nearer the supernal light than are other men, and upon him falls an increased duty.

We come here in some sense as did assemble the Greeks of old, to celebrate the Olympian games. Friendships were formed, emulation excited, the beauty, and the strength of the maidens and young men were extolled and exalted. We too are summoned by a cloud of witnesses, and must press forward towards the prize. I often wonder when, or if we too,

“Falling by our own weight,
Shall become a prey to time.”

Are we like the great image set up in the king's dream, our head of gold, our arms and breast of brass and iron, emblems of knowledge, beauty, and strength, while our feet are of pieces of iron and potter's clay that cannot cleave together? And are we crumbling by our own weight the discordant elements upon which we stand, to fall prone, never to raise again? Let us rather hope for another ending, that those who dwell here shall speak a common language and have common memories, shall struggle alike to build up institutions devoted to all development. That they will fill these mountains and these great broad vales of peace between with plenty; that instead of a fallen image with the aid of elemental forces, subjected to their will, they may build here a temple devoted to agriculture and arts, which lifting its proud dome to heaven, while you and I have long passed from the realm of human thought, shall commemorate in a noble way the hopes and fears which agitate us, and the efforts we exert in the great work of human progress.

THE FOOT-HILLS OF THE SIERRA.

READ BEFORE THE CALIFORNIA ACADEMY OF SCIENCE JANUARY FIFTH,
EIGHTEEN HUNDRED AND SEVENTY-NINE—BY B. B. REDDING.

GEOLOGICAL FORMATION.

The western base of the Sierra Nevada bordering the Sacramento Valley is known in this State as the foot-hill region. These foot-hills extend from Redding, at the northern end of the valley, to Caliente, at the southern extremity, a distance of three hundred and fifty miles. I am indebted to Mr. A. Bowman, formerly of the State Geological Survey, for the following description of the formation of this portion of the State. He says: "Generally speaking, there are gradually rising low outliers of upper tertiary gravels, sands, and clays all along the western base of the Sierra. They are often capped by volcanic matter, and cut through by erosions—the dry, winding arroyos through the flattish hills that are familiar to every one who has followed along the edge of the Sacramento and San Joaquin plains. These erosions in some places cut down into the middle tertiary, and even into the cretaceous beds; but there is little surface area of the latter. On the plains all is covered up by the recent deposits. Patches occur of middle tertiary and upper tertiary, where denudation has removed great masses of tertiary country, with these exceptions: for example, at Millerton, on both sides of the San Joaquin, a patch of middle tertiary hills about three by ten miles is seen, and at Ione Valley, several miles square of steep hills of this period are laid down in slightly pitching beds. The tertiary formations reach away up into the Sierra, in the shape of ancient river deposits. They change at from three hundred to one thousand five hundred feet altitude into fluvial deposits; although a large portion of the plains, tertiary to below the present sea level, is also fluvial, interbedded with lacustrine or marine, sometimes apparently in alternate order. The surface areas may be said to change, going eastward, from recent to upper tertiary (pliocene) as the soil belongs above or below the volcanic outflow; and then to the slate and granite formations of the Sierra, extending to the summit. The cretaceous formation shows scarcely any surface area along the base of the Sierra except in Shasta County, although from Folsom north the ravines and cañons expose its edges—especially north of Oroville. At Reading's ranch, and from there north to Pit River, the flat country is all cretaceous, the tertiary being mostly removed by denudation. The same is true of patches between there and Oroville. The patch between Fort Reading and Pit River is about twenty miles square. The foot-hill cretaceous of Butte and Shasta Counties is overlaid by the Shasta coal measures which are, I think, middle or upper tertiary; and these again by the upper tertiary formation of the ancient river gravel period, and by the volcanic outflows from

the Lassen volcanic chain. No cretaceous rocks have been identified intermediate between Folsom and Tejon Pass. Lithologically the cretaceous beds are much more silicified and compacted than the tertiary. They are the shales and conglomerates found in these regions, while the tertiary are often loose and fragile, and scarcely worthy of classification in the harder category. Both are very regularly bedded and only moderately tilted here; while on the opposite side of the valleys of the Sacramento and San Joaquin they are both tilted and altered—remarkably so in comparison with those on the east side, and in proportion to their age, generally speaking. The older rock formations of the Sierra foot-hills are, in the main, granites south of Fresno River, and slates north. The slate region contains patches of granite often several miles square, and there is between Folsom and the Central Pacific Railroad a larger patch, eight or ten miles square at the least, extending from the valley to near Auburn. The granite region at the south has also patches of slate. Opposite Visalia, at the edge of the valley, are two isolated patches ten by twelve and ten by fifteen miles. It remains only to trace the boundary between the slate north of Fresno River and the tertiary of the valley. Along the line, beginning at the south, are the Buchanan copper mine, Indian Gulch, and Snellings, near the western Mariposa County line; La Grange, Knight's Ferry, near the Tuolumne line; Telegraph City, Campo Seco, Michigan Bar, and Mormon Island, near the edge of Calaveras, Amador, and El Dorado—in short, a line separating these mountain counties from the valley counties, or very nearly. Further north the framers of the counties did not study the soil. In Placer County, Rocklin on the west and Auburn on the east mark the granite limits; and from there north in Yuba to Oroville in Butte County, the first steep foot-hills of the Sierra are of the slate formation. The flat-bedded, unaltered formations of the foot-hills, described as upper tertiary, rise to very different altitudes in different places. The Oroville Cherokee mesa is, if I remember aright, considerably over one thousand feet above the sea at the Cherokee end. Similar isolated middle and upper tertiary (miocene and pliocene) hills are found left in remnants all along the base of the Sierra south of Oroville, while to the north they are plastered up against the Sierra with a cretaceous base, and preserved by a volcanic capping covering nearly the whole country. The slates and granites extend to the summit of the Sierra, the line between the granites of the south and the slates of the north running slantingly from the point mentioned on Fresno River through the heart of Mariposa County toward Lake Tahoe, in a tolerably direct line."

CLIMATE.

From Redding in the northern end to Sumner at its southern extremity, as has been stated, is a distance of three hundred and fifty miles. The mean annual average temperature of Redding is sixty-four degrees and fifteen minutes. The lowest point to which the thermometer has fallen since a record has been kept was twenty-seven degrees in December, eighteen hundred and seventy-six. Its annual average rainfall is forty-eight and five one-hundredths inches. Sumner, at the southern end of the valley, has an annual average temperature of sixty-eight degrees and twenty-nine minutes, and an average rainfall of four inches. The lowest point to which the ther-

mometer has fallen at this place was also twenty-seven degrees, on the same day in December, eighteen hundred and seventy-six. There is a remarkable uniformity in the climate throughout the Sacramento Valley. In it a difference of five degrees of latitude, between thirty-five degrees and thirty minutes and forty degrees and thirty minutes only lowers the annual average temperature four degrees and fifteen minutes. The difference of the annual average temperature between corresponding degrees of latitude in the Atlantic States at an equal distance from the ocean is more than eight degrees. It has been found that the foot-hills of the Sierra, up to a height of about two thousand five hundred feet, have apparently the same temperature as places in the valley having the same latitude. It has also been found that with increased elevation there is an increase of rainfall over those places in the valley having the same latitude as, for illustration, Sacramento with an elevation above the sea of thirty feet has an annual mean temperature of sixty degrees and forty-eight minutes, and an average fall of rain of eighteen and twenty-five one-hundredths inches, while Colfax, with an elevation of two thousand four hundred and twenty-one feet, has an annual mean temperature of sixty degrees and five minutes, and an average annual rainfall of forty-two and seventy-two one-hundredths inches. This uniformity of temperature and increase of rainfall appears to be the law throughout the whole extent of the foot-hills of the Sierra, with this variation as relates to temperature, namely, as latitude is decreased the temperature of the valley is continued to a proportionally greater elevation. To illustrate, approximately, if the temperature of Reading at the northern end of the valley is continued up the foot-hills to a height of two thousand feet, then the temperature of Sacramento in the center of the valley would be continued up to two thousand five hundred feet, and that of Sumner in the extreme southern end of the valley up to three thousand feet. The increase of rainfall on the foot-hills in the latitude of Sacramento, due to elevation, is about one inch to each one hundred feet. South from Sacramento the proportion decreases until at Sumner the increase due to elevation is but half an inch to each one hundred feet. This is shown by the record kept at Fort Tejon in the Tehachipa Mountains, near Sumner, at an elevation of three thousand two hundred and forty feet, where the annual rainfall is nineteen and fifty-three one-hundredths inches. There is no record kept at any point in the hills above Reading, but probably in this latitude the increase due to elevation is about one and a half inches to each one hundred feet. The increase of precipitation on the hills at the northern end of the valley gives greater density to the forests, and permits them to grow at lower elevations than in the southern end of the valley. At the same time the difference in temperature is so small that the character of the vegetation of the hills at each end of the valley is not dissimilar. The trees that are found in the vicinity of Reading, at the northern end of the valley, below an elevation of five hundred feet, are not found at the southern end until we pass Caliente at an elevation of one thousand three hundred feet. It would seem that the temperature of the valley prevails up the Sierra to an elevation that equals the average height of the Coast Range of mountains. If a line were drawn parallel to the surface of the ocean from the top of the Coast Range east until it met the flanks of the Sierra, it would mark a level on the Sierra below which the temperature would not

materially differ from that in the Sacramento Valley. This fact is probably to be ascribed to the prevailing southwest return trade wind which blows over the State from the ocean for more than three hundred days in the year. Passing the summits of the Coast Range but small portions descend into the valley; the remainder reach the sides of the Sierra at about the level of the summits they have passed.

ARBOREAL VEGETATION.

At the northern end of the valley, at an elevation of five hundred feet above the sea, of the California oaks are found *Quercus lobata*, *Sonomensis*, *Chrysolopsis*, *Wisleyenii*; of pines, only the nut or Digger pine (*Pinus Sabiniana*); the buckeye (*Aesculus Californica*), and chemical (*Adenostoma fasciculata*). This is the characteristic arboreal vegetation throughout all these three hundred and fifty miles. Its presence everywhere shows increased rainfall over the valley and similarity of temperature to that of the valley. Our pasture oak (*Quercus lobata*) is found at lower elevations, in the valley, but always on moist land or near river courses, proving that it demands, in addition to temperature, the increased moisture. In the southern end of the valley this vegetation prevails at higher elevations, because it there finds the proper temperature and moisture. Wherever on the foot-hills any of the trees named constitute the predominant arboreal vegetation, it is evidence that the temperature is the same as that of the valley, and that plants that can be successfully grown in the valley can be grown to as high an elevation on the hills as these trees abound. If one tree were to be taken as the evidence of this uniformity of temperature it would be Sabin's (the nut, or Digger) pine. It is never seen in the valley or on the hills below an elevation of about four hundred feet. It is not found at a higher elevation than that in which the temperature is the same as that of the valley. It is never found in groves, but singly among other trees, yet it prevails throughout these three hundred and fifty miles of foot-hills. While the vegetation is more dense on the hills at the northern end of the valley, due to increased precipitation, there are also local differences—where there is similarity of soil—due to exposure. Throughout all the lower hills the greatest number of trees is found on gently sloping eastern, northeastern, and northern hill-sides, which necessarily are more moist and cool. The southern aspects contain less trees because exposed to the direct rays of the sun and to the full force of the prevailing winds.

AREA OF FOOT-HILL REGION.

On the line of the Central Pacific Railroad the foot-hills commence at Roseville, which has an elevation of one hundred and sixty-three feet. From this point to Colfax—elevation, two thousand four hundred and twenty-one feet—in a direct line is a distance of thirty-two miles. To allow for all possible errors it would be safe to estimate that the width of the foot-hills, where the valley temperature prevails, is twenty miles. This region, therefore, embraces a tract of country from Redding to Sumner, three hundred and fifty miles long and twenty miles wide, or four million four hundred and eighty thousand acres. The principal towns in this part of the State are Oroville, Nevada, Grass Valley, Colfax, Auburn, New Castle, Georgetown,

Placerville, Coloma, Jackson, Sonora, Columbia, Mariposa and Havilah. In the vicinity of these towns, and also near the line of the Central Pacific Railroad, the land is occupied by settlers. It would be using a large figure to state that a half million acres of these foot-hills have been preëmpted. If we estimate that another million is composed of lands granted to the Central Pacific Railroad Company, ravines, river-beds and lands too rocky or precipitous for cultivation, there would remain nearly three million acres of land, all of it timbered, all having abundant rainfall, in a semi-tropical climate, and to which title in one hundred and sixty acre tracts can be acquired by settlement and complying with the rules of the United States Land Department. Throughout the whole region ever-living springs are numerous; and in those parts where there has been placer mining, there are many canals from which water, by purchase, can be obtained for irrigation. The immense precipitation that takes place during the rainy season along the western face of the Sierra, passes through this region in streams that are tributaries to the Sacramento and San Joaquin. Within this distance there are fifty-four of these principal streams, whose waters are perpetually adding to the volume of the Sacramento and San Joaquin.

ADAPTATION TO CULTIVATION.

Every agricultural product that can be grown in the valleys, including the semi-tropical fruits, can be grown with equal facility in these foot-hills. Ordinarily the land has to be cleared of the trees found upon it, and cultivation must be continuous, for on the whole western face of the Sierra the native trees, when cut or burned down, are rapidly replaced by a new growth of the same kinds. These lands are found to have all of the requisites for the successful growth of orchards. Fruit trees thrive better upon them than on the lands of the valley. None of the many theories advanced as to the cause of the treeless condition of many plains and prairies having ample rainfall seem to be entirely satisfactory, but experience has demonstrated that orchards grow best and thrive with less artificial aid on lands that in a natural condition are covered with trees. The increasing exports of small fruits, such as strawberries, blackberries, and raspberries, from the vicinity of New Castle and Auburn, and their superior size and quality, prove that this region is better adapted to their culture than any place yet found on the level lands of the valley. The peaches of Coloma have a State reputation for flavor and size. The apples of Nevada and Georgetown are equal in size, taste, and keeping qualities to the best imported from Oregon. The Oroville oranges have been pronounced equal to the best Los Angeles. The vine grows with luxuriance and bears abundantly wherever it has been planted throughout all this region. The wines of Coloma have more than a local reputation. Persons competent to judge assert that wine from grapes grown on the foot-hills is free from the earthy taste that characterizes much of the wine of the flat land of the valleys. They also express the belief that if ever wine is to be made in California as light as that from the Rhine, and as free from alcohol, the grapes will be grown in the higher elevations of the foot-hills, where snow falls and remains on the ground a few weeks each season. It is said that the long summers and great heat

of the valleys develop the saccharine matter in the grape, which by fermentation is converted into alcohol.

THE LANDS OPEN TO SETTLEMENT.

There is but one Spanish grant in all this region, the Fremont grant, in Mariposa. The land, therefore, can only be obtained from the government in tracts of eighty and one hundred and sixty acres. A monopoly of the land in large estates is consequently impossible. The character of the country being of rolling and rounded hills prevents the possibility of very large farms. Experiments have shown that the soil is more productive than the dry plains of the valley, but of course it does not yield crops as largely as the deltas and bottom lands of the rivers. It is certainly better and more productive than lands similarly situated in France, Switzerland, and Italy, which now sustain a population of millions. Wood is everywhere to be found, and in this region north of Oroville there is an abundance of water in the streams and springs not yet appropriated. These lands have remained open for settlement because, up to the present time, sufficient government land could be found in the valleys. The legislation by Congress has been, and still is, unfavorable to their appropriation for agriculture. The river bars and benches of this region originally contained the placer gold mines. Positive legislation by Congress forbade their survey for many years after the State was admitted into the Union. When surveys were ordered the Land Department at Washington was so fearful that they would be occupied by farmers to the injury of the miners, that more than one million acres were reserved as mineral land. The placer mines of these foot-hills have ceased to yield gold even at Chinese wages for the past ten years, yet the Land Department at Washington continues the mineral reservation on these lands. The effect of this is to increase the expense of obtaining title from the government, and thereby the settlement of this region has been retarded. Where a farmer settles on land that has been reserved as mineral by the Commissioner of the General Land Office, the expense has to be borne by the settlers of, showing by testimony that his farm contains no mines, and that it is only valuable for agriculture. There are two million acres of these lands on which there is no mineral reservation, and which can be obtained by homestead and preëmption as cheaply as were the lands in the valley. It cannot be but a few years before the unwise policy of reserving lands as mineral, that in fact are not mineral, will be abandoned, so that these lands can be obtained by settlement, preëmption, and homestead as cheaply as other lands. As I have shown, there are more than three million acres of these lands open to settlement—fallow from the flood—waiting for occupants; capable of supporting a population of a hundred thousand people, if they will but cultivate them; situated in a semi-tropical climate, and in all the higher regions free from miasma. One need not be a prophet, nor the son of a prophet, to foretell that before many years the agriculture of California will become varied, and cultivation will not be confined to one cereal. Then the foot-hill region of the Sierra will be occupied by a prosperous and happy rural population.

FRIEDLANDER'S ANNUAL GRAIN CIRCULAR.

SAN FRANCISCO, June 30th, 1878.

The course of the San Francisco grain market is so dependent on that of Liverpool, that before proceeding to review our trade for the year just closed, it may be well to glance at that of Great Britain during the same period, as it is there that the key to the fluctuations of our market can generally be found.

The harvests of eighteen hundred and seventy-five and eighteen hundred and seventy-six had both been deficient in Great Britain, and the month of July, eighteen hundred and seventy-seven, found Liverpool with small stocks of all descriptions of breadstuffs. The weather at the same time was very unfavorable for the growing corn, while on the Continent the sanguinary war raging between Russia and Turkey seemed destined to cut off some of the largest and most available sources of supply. Under such circumstances it was not surprising that prices ruled comparatively high, and they undoubtedly would have ruled much higher had it not been well established that the Western States of the American Union were getting ready to cut by far the largest crop ever harvested in that great grain producing region. Average California wheat "off coast" at the beginning of that month ranged from fifty-seven shillings to fifty-eight shillings per quarter, and about twelve shillings for spot deliveries ex quay; while as high as fifty-nine shillings ninepence was paid for "all the year" shipments. The market subsequently fluctuated with the weather, but as a general rule weakened for cargoes just shipped, while it remained very strong for those close at hand. Thus fifty-six shillings sixpence was offered early in August for the former while as high as sixty shillings was paid for the latter. Western red wheat meantime was selling for nearly the same figures, say fifty nine shillings for four hundred and eighty pounds. The harvest in England was a late one and proved very unsatisfactory, being deemed by many the worst that had been gathered for twenty years. The yield was poor and the grain gathered in bad condition, some of it in Scotland standing in the fields until caught by the snows of November. The market in consequence advanced steadily through September and October, as high as sixty-four shillings having been paid for California "off coast" in the latter month, but the influence of the crop in the Atlantic States still kept prices for "forward shipment" down, and the rise for such shipments was moderate, say from fifty-six shillings in August to fifty-eight shillings and fifty-nine shillings in September and October. Number two spring, new crop, meanwhile had dropped from fifty-six shillings to forty-eight shillings sixpence "for shipment." During the balance of the fall the same state of affairs existed, the market for California cargoes near at hand being strong, while comparatively weak for those just shipped. This on the whole made a satisfactory business for dealers and operators in England, a cargo purchased in San Francisco rising gradually but steadily during the passage, and leaving a handsome profit on arrival, and during this time a good deal of money was made in Liverpool. But the

enormous out-turn of wheat from the northwest, and the accessions to stock from Russia (which, notwithstanding the war, kept exporting grain), Australia, and India, was certain to tell in the long run, and early in the spring the market began to decline, bringing heavy losses to all hands. The fact is that, although the crop of the northwestern States was known to be an exceedingly large one, no one in Liverpool seemed able to realize how large it really was, and the absorbent powers of the country had been so great that it seemed as though Great Britain could take it all. This blinded dealers to the reality of the situation, and induced operations in spot wheat and cargoes on passage in January and February, which were destined to result in heavy losses. During these months, California wheat for shipment fell from fifty-six shillings to fifty-two shillings per quarter; in March and April, to fifty shillings; in May, to forty-eight shillings and forty-seven shillings; and in June, to forty-six shillings and forty-five shillings, which is about the rate at the close.

Of course, this decline, while regular, was not uninterrupted. From time to time the market rallied, and prices advanced sixpence to a shilling a quarter, but always to retrograde again, and generally to a lower point than that from which they started. Nothing, in fact, could stand the immense volume of receipts, ranging steadily from two hundred and fifty thousand to four hundred thousand quarters per week; and the wonder is not that the market collapsed, but that it stood up as long as it did.

The California crop of last season was a very poor one, the surplus for export amounting to but a little over one-third of that of the preceding year. Our table of exports shows more than this, but included in it are some forty thousand tons received from Oregon. We give below tables showing the receipts and exports for a series of years past, which show at a glance the yield and surplus of each year, as well as a detailed table of exports, to which we beg to call your attention.

The season opened in July under great excitement. During the preceding spring, the war between Russia and Turkey had stimulated prices in England very much, and the excitement resulting therefrom was heightened by a dry season on this side, and a very wet one in Europe. Wheat in May had sold here for three and one-fourth cents per pound, and, when nearly one-half of the wheat-growing area of the State produced *nothing*, it was not wonderful that farmers who had any part of a crop at all, were disposed to hold for extreme figures.

The market opened at two dollars and thirty cents per cental, and by the middle of July had risen to two dollars and sixty-two and one-half cents under the influence of reported heavy rains in England. When this stimulus was removed, a decline resulted, but it was resisted most strenuously, and a large part of the crop was placed in store under advances. Meantime the Chicago market was declining rapidly, and the western farmers, more keenly alive to the situation than ours, were pushing their grain forward to tide-water as rapidly as possible. Early in September, sales to some extent were made here at two dollars and seventeen and one-half cents and two dollars and twenty cents, but later on a bad turn in the weather in England again set wheat up to two dollars and thirty-seven and one-half cents and two dollars and forty cents. During October and November the market experienced but little change, the decline in

England being met here by a fall in freights, which went to thirty-seven shillings sixpence to the United Kingdom for iron ships, a rate unprecedentedly low for this season of the year. When December came and passed without rain, the market price began to be regulated by the fears of the farmers regarding the next season, not by any present or prospective demand from abroad; and up to the middle of January parties who wanted wheat were compelled to pay from two dollars and thirty cents to two dollars and forty cents per one hundred pounds. Then, however, a change set in. The rains which we had expected in November commenced January eleventh, and continued almost without interruption for five weeks. When they cleared away, and it became possible to traverse the country (a large portion of the State meantime having been completely submerged), all danger of a failure of the crops was removed, but the market was lost. Plevna had fallen, and Turkey's means of resistance were at an end. Wheat in England had gone to fifty-two shillings per quarter, and every railroad and steamer in the East was choked with grain hurried forward to Liverpool. Wheat here, in February, sold for two dollars and one dollar and ninety-five cents; in March, at one dollar and ninety cents and one dollar and eighty-five cents; and no improvement again took place until all the available surplus had been shipped away, and the market was turned over wholly to the millers. Even the prices named, however, could never have been sustained, had not the freight market been reduced to an unprecedentedly low figure, and freights been put to a point that never had been dreamed of in San Francisco before. First-class vessels consented to accept twenty-seven shillings sixpence and thirty shillings to Liverpool, and thirty-two shillings sixpence to the Channel for orders; and it is a noteworthy fact that even at these extreme low rates no money was made on the cargoes.

The only other noticeable features of the wheat market during the year were the shipment of a few cargoes of wheat and flour to the west coast of South America, and a few to the Cape of Good Hope; but these were ventures on the part of merchants there, and it is questionable whether any of them left much profit.

A great deal of dissatisfaction has arisen among our merchants during the year, caused by the unusual number of arbitrations called for on California cargoes arriving out, and the singular unanimity with which allowances have been made against shippers. During past years it has not been unusual to ask reclamation against quality, but it never before reached the point it did last season, when in some cases notice was given absolutely before the hatches had been removed. Our exporters have been so annoyed by this system that they have been forced to take steps to protect themselves, and it is to be hoped that they will prove effective.

The Oregon crop of eighteen hundred and seventy-six and eighteen hundred and seventy-seven was better than an average one as far as yield was concerned, but the quality was hardly up to that of previous years. Low steamer freights, brought about by opposition, resulted in large shipments to this port; but in addition, seventy-two vessels cleared from the Columbia River for European and other ports, bearing away about one hundred and fifty thousand tons of wheat. The new crop will be reaped in August, and promises to be a good one in every respect, although of late some complaints have been heard of unseasonably hot weather.

We now hand you our usual statistical tables of receipts and exports, running through a series of years, as also detailed tables of exports, showing the various points with which we did business during the cereal year just closed.

RECEIPTS OF GRAIN AND FLOUR (CALIFORNIA PRODUCTS ONLY) AT THE PORT OF SAN FRANCISCO.

	Wheat— Centals.	Barley— Centals.	Oats— Centals.	Flour— Barrels.

In addition to the above, we have received from Oregon five hundred and fifty-eight thousand nine hundred and ninety-five centals of wheat; seven thousand seven hundred and sixty-six centals of barley; one hundred and seventy-nine thousand nine hundred and forty-six centals of oats; and ninety-seven thousand and seventy barrels of flour. Our total receipts, therefore, foot up: Four million nine hundred and forty-two thousand two hundred and ninety-two centals of wheat; eight hundred and forty-three thousand five hundred and ninety-three centals of barley; three hundred and eight thousand five hundred and forty-five centals of oats; and four hundred and seventy-six thousand five hundred and twenty-six barrels of flour.

WHEAT.

The first new wheat of the season made its appearance in this market June fourteenth. Since then, as is usually the case, receipts have been very light, and we cannot expect them to become any way free until the middle of July. The important question of yield and surplus is a very vexed one, and it is difficult to find two people among judges who arrive at the same conclusion. The planting season was deferred to a very late date in consequence of absence of rain, and when the season really opened (January eleventh,) the outpour was so continuous and lasted so long, that in many districts it was impossible to get the land in tillable shape until it was too late to give any certainty of a crop. As is always the case, a large portion of the State had been seeded to summer fallowed land, and consequently had the benefit of all the rains, but such was the wonderful outpour of water during the months of January and February, that while many of the finest districts were so "washed" as to destroy a considerable portion of the growing grain, other large sections were entirely overflowed by the rivers, and the crop utterly destroyed. Still for every acre destroyed or rendered unfit for cultivation, it is probably safe to say that five were brought into bearing. The outlook for the largest crop ever harvested in the State continued most favorable until within the last fortnight, when rust made its appearance in many sections, and in some has worked great injury. It is impossible as yet to say how much damage has been done, but it undoubtedly is considerable, and will in many districts materially curtail the yield. Still, taking everything into consideration, it seems probable that we will export as much wheat as we did from the harvest of eighteen hundred and seventy-six, which was within a trifle of six hundred thousand short tons. Sales of new crop have been made to the extent of say twenty thousand tons to load ships now here or to arrive in July, at one dollar and seventy cents and one dollar and sixty-five cents for July delivery, and one dollar and sixty-five cents and one dollar and sixty-two and one-half cents for August. Farmers, however, are naturally indisposed to sell, at least until their wheat is harvested and they know what they have for sale, and meantime with a declining market in England, and the prospect of another magnificent crop in the northwest, buyers are by no means anxious for wheat, and we look for a dragging market for several months to come, unless unfavorable weather in England and the Continent during harvest time should cause an advance there, and consequently higher prices here. We have, however, a large amount of tonnage here and on the way, all of which will have to be loaded with wheat, and this will place our market to a great degree in an independent position, no matter how large our surplus may be, and shift the profit or loss on shipments on to the freight instead of the wheat. As regards the quality of the new crop it is too early to speak with much confidence, but the long continued rains of the early spring render certain a large amount of foul wheat, while the rust of the latter part is sure to pinch a great deal of good grain, and render it unfit for shipment. Still, we have some immense areas of perfectly clean wheat which will produce an admirable crop, and we have little doubt that the bulk of our exports will be up to the standards of former years.

BARLEY.

The unfavorable character of the season of eighteen hundred and seventy-six and seven, was manifested more particularly in the yield of barley than in any other of our cereals, the districts best adapted to the culture of that grain having been subjected in an especial degree to the drought that in that unfortunate season scourged our whole State. The crop was a very poor one in the best of these sections, and, in most, was an entire failure. The business of the year was consequently a very poor one, and almost entirely local, our exports amounting to hardly a sixth of those of the preceding year. The market opened in July very strong at one dollar and seventy-five cents per one hundred pounds, for feed descriptions, and one dollar and eighty-five cents for brewing; and these prices were maintained with only trifling variations for nearly three months—feed in November even selling as high as one dollar and sixty cents and one dollar and sixty-five cents, and brewing one dollar and eighty cents. During this period some seventy-five thousand centals of Chevalier were exported to Great Britain, at a cost of one dollar and ninety cents to two dollars—which exhausted about the entire surplus of that description. The rains of January, which practically insured a crop during the coming season, of course worked a complete change in the market, and in February we find feed kinds selling for one dollar and twenty-five cents, while brewing had gone to one dollar and forty cents and one dollar and thirty-five cents. The decline continued through March and April, and in May, when it became necessary to clear out the warehouses, feed was sold for eighty-five cents and brewing for ninety cents—much of the old stock having become weevily. Our list of exports shows a lamentable falling off in all directions, South America taking almost nothing, and Australia very little, while none at all was sent by rail to the Mississippi Valley, these having been in previous years our great points for shipment. The crop now being harvested is undoubtedly one of the largest, if not the very largest ever raised in the State, and much of it will be of a very superior quality. Such samples as have reached market indicate excellent color and weight; but late rains are reported to have damaged a good deal of grain in the southern coast counties. New feed opened at eighty-five cents per cental, and the impression is general that extremely low prices will rule. It is to be hoped that openings will be found for our surplus, and with fair rates of freight to Australia (by steamer) and to Chicago and St. Louis (by rail), we hope to see much of the grain utilized. At best, however, it is difficult to see how the crop can prove a profitable one to the producers.

OATS.

There is no call for any review of the market for this description of grain. The business done has been entirely local, and, as usual of late years, a large proportion of our stock has been furnished by our neighbors in Oregon. Dealers are looking forward to a possible trade with Australia during the coming three or four months, but no orders have appeared so far, and the whole business at the best will be insignificant. As far as we can learn the growing crop promises to be better than an ordinary one.

FLOUR.

Our exports of flour during the past year show a falling off of some sixty thousand barrels, which is not surprising when we consider the high prices that ruled for wheat during that period. The decline has been chiefly in the shipments to Liverpool, to which port we sent but one hundred and sixteen thousand barrels, against two hundred and fifty thousand barrels the year before. This trade has not been a very satisfactory one, and is not likely to assume as large proportions as it did in eighteen hundred and seventy-six for years to come, the shipments being mostly made by one milling establishment which thus seeks an outlet for its goods. The trade with China and Japan on the other hand shows a considerable increase, while we have made a decided gain in shipments to South America and have held our own in our trade with Mexico, Central America, and the Islands in the Pacific. In the absence of any other noteworthy features in the market we append quotations, which are for half and quarter sacks per one hundred and ninety-six pounds: "Superfine," four dollars and twenty-five cents and four dollars and fifty cents; "Shipping Extra," four dollars and seventy-five cents; "Bakers' Extra," five dollars and five dollars and twenty-five cents.

WOOL REPORT OF E. GRISAR & COMPANY, FOR THE YEAR 1878.

WOOL PRODUCTION—RECEIPTS AT SAN FRANCISCO.

January	1,084 bags.
February	787 bags.
March	788 bags.
April	15,631 bags.
May	28,057 bags.
June	12,526 bags.
July	6,472 bags.
August	4,154 bags.
September	16,021 bags.
October	25,028 bags.
November	7,826 bags.
December	1,444 bags.
Total	119,818 bags.

Of which there was spring wool, 65,899 bags, weighing	19,769,700 pounds.
Spring wool shipped direct from the interior	1,392,591 pounds.

Total spring production	21,162,291 pounds.
-------------------------	--------------------

There was fall wool received, 53,919 bags, weighing	16,175,700 pounds.
Fall wool shipped direct from the interior	1,274,070 pounds.

Total fleece wool	38,612,061 pounds.
Pulled wool shipped direct from San Francisco	2,250,000 pounds.

Total production of California	40,862,061 pounds.
On hand December 31st, 1877, about	1,500,000 pounds.
Received from Oregon, 21,518 bags	6,055,400 pounds.
Foreign wool received, 1,044 bales	334,080 pounds.

Grand total	48,751,541 pounds.
-------------	--------------------

EXPORTS.

Domestic, foreign, pulled, and scoured:

Per rail, inclusive of shipments from the interior	36,597,625 pounds.
Per steamer, inclusive of shipments from the coast	495,885 pounds.
Per sail	5,273,107 pounds.

Total shipments	42,366,617 pounds.
Value of exports	\$7,000,000.
On hand December 31st, 1878	1,400,000 pounds.

Difference between receipts and exports has been taken by local mills and scouring companies. There is also more wool than usual here, awaiting shipment by sailing vessel.

The weights of receipts and exports are gross. The usual tare of bags received is about three pounds each; on pressed bales shipped, fourteen to sixteen pounds each.

The full effect of the dry season of eighteen hundred and seventy-six, upon the wool production of California, did not become manifest until this year. By reference to the statistics herewith it will be noticed that the clip of eighteen hundred and seventy-eight is one-fifth less than in eighteen hundred and seventy-seven, and one-quarter less than eighteen hundred and seventy-six. In this latter year the production reached its maximum, and we think, under the

present system of wool growing, the clip will decrease rather than increase. Every year the extension of transportation facilities, renders possible the cultivation of land hitherto devoted to pasturage, thereby making it too valuable for raising sheep; of course there is in the State a great extent of territory which is only useful for grazing purposes, and although the wool interest in the State will always be prominent it will, probably, for some time, fall still farther behind the grain product in value and amount. If farmers could see that it was for their interest to diversify their production, and besides growing grain have a few sheep the clip might be increased in amount, and improved in other respects. The shrinkage in values from which the whole country has suffered, has been left to only a moderate degree as yet in this State. Lands have been too high priced, and wages have also been more than growers could afford. Until these items find their value we may expect to see a continuance of the decline in production, because wool raising will be unprofitable. Heretofore the proceeds from the sale of fat sheep formed a large part of the income of the wool grower, but owing to the great number of sheep which are now offered for sale the price has declined to a very low point compared with that formerly ruling.

As regards the market for their product wool growers have no cause for complaint, as prices for California wools show less shrinkage, from what they were in eighteen hundred and seventy-seven, than those grown in other parts of the United States, and when compared with prices paid for other wools they are high, and the chances are in favor of their declining. Choice Colonial wools were lately sold in London at about thirty cents average, Cape at twenty cents, and fair to inferior descriptions at lower rates; of course the net results to the grower are somewhat less. In comparison with Colonial wool at thirty cents even northern spring California at twenty-five cents is very dear, and between Cape wool at twenty cents and northern lambs' clip at eighteen cents, there can be only one opinion as to which is the most desirable. The production of the Colonies and at the Cape is increasing, while growers in California say they cannot afford to raise wool at present rates. Even in the more thickly settled States, where growers are compelled to feed their sheep in winter, the production is increasing, and also in Colorado and the Territories. Few, if any parts of the United States, have better natural advantages for sheep raising, yet apparently California is being crowded out of the business. The clips of the Territories is increasing, and competes severely with that of California. Judging from results the system of wool growing here is wrong, but the remedy we must leave to those who understand the business practically.

The condition of the clip, as a whole, has been poor. In the spring there was a great deal of scabby wool, and owing to late rains a considerable quantity was received in a wet and damage condition. Contrary to general expectation the fall clip has been very poor, in fact the poorest for many years, being dusty, heavy, and short stapled. Southern wools had more life than usual, but contained more bur and seeds. From the extreme north, some wools were received which were as good as they have ever been, but as a rule the clip was very inferior. Still, throughout the year, wools have met with ready sale, owing to the presence here of many eastern buyers. In the spring prices opened higher than was anticipated, and were main-

tained until after the beginning of June when a gradual decline on most descriptions set in, leaving at the opening of the fall season but little spring wool unsold. Opening prices for fall wools were low, and the demand was moderate. As receipts increased the number of buyers was greater, and wools have moved off readily throughout the season, but without any excitement among purchasers. Stocks of all descriptions at this time are smaller than they have been for several years, a large portion of which is in poor condition or defective.

Average stapled free wools in the spring opened at nineteen cents to twenty cents, and for light conditioned parcels twenty-two cents was paid, but such lots were rare. The first receipts of long stapled wools free from bur were sold at twenty cents to twenty-two cents, and of wools containing burs at nineteen cents to twenty-one cents. Good stapled wools with burs brought seventeen cents to nineteen cents. Northern wools ranged in value at the opening of the market for this description from twenty-five cents to twenty-six cents. On all classes towards the end of the season there was an average decline of about ten per cent. Prices of fall wool have been the lowest for several years, and will average less than during any season since the grade of wools has been improved. Ordinary southern, containing burs and seeds, brought nine cents to ten cents; average wool from the middle counties, and free from bur, has met with ready sale at eleven cents to thirteen cents, and heavy parcels have been taken at nine cents to ten and one-half cents. Northern fall wool free from bur brought fourteen cents to fifteen cents; parcels containing seeds or burs were sold at eleven cents to thirteen cents, and lambs' wool in light condition, seventeen cents to eighteen and one-half cents.

The production of Oregon wools has increased, the gain having been made in eastern, and will probably continue. The clip of western Oregon has fallen off. The early arrivals from eastern Oregon were poor, being coarse and containing considerable alkali and dust. Later receipts showed a decided improvement, and met with ready sale. Prices ranged from sixteen cents for fair to twenty-one cents for choice. As usual most of the valley wools were purchased in the country, and sent forward without being offered here. For choice wool of good quality twenty-five cents to twenty-six cents was paid, and for ordinary wools twenty-two cents to twenty-four cents.

Respectfully yours,

E. GRISAR & CO.

SAN FRANCISCO, January 1st, 1879.

ALFALFA FED BY THE SOILING SYSTEM.

The Rural Press publishes an article upon this subject, read before the California Dairymen's Association at its late meeting, by Honorable E. Nason, of San Benito County. The essayist starts out with a statement that some dairymen object to alfalfa as food for dairy cows on the ground alleged that it makes the product, butter or cheese, of poor quality, the milk being tainted. The objection he answers in this way: "I am frank to admit that when cows are fed in the old way, being turned into a field of rank and sudden growth (for under favorable conditions the growth is always rapid and sudden) the milk is for a few days offensive, but soon becomes sweet and pure." He then as frankly asks the objector if the same difficulty is not experienced wherever and whenever an abundance of wild feed is found and fed in the old way. Taking it for granted that the answer to this inquiry must be in the affirmative if answered intelligently and honestly, he concludes that the objection lies against the system of feeding rather than against the food itself. The second objection to the system of soiling cows, viz., the cost of feeding, he answers in the following language: "I am of the opinion that this is not weighty, for every dairy requires a certain force to run it successfully, and, as there is much spare time between milkings for all the hands, save those who make the butter or cheese, the outside help can do all the feeding. If we find, by carefully estimating the cost, a small margin against our system, I am certain it will appear insignificant when set over against the diminished cost in feed, for I feel very certain that the statement that three cows are fed where only two are fed by the common method, is far below what a good stand of alfalfa with plenty of water will do." The writer then states his own experience in soiling dairy cows on alfalfa. In the spring of eighteen hundred and seventy-seven he had a dairy of thirty cows in poor condition, and he had fifteen acres of alfalfa, five acres of which were sown in February of the same year, and did not yield like an old stand would have done. He commenced cutting on his old stand in the second week in March and fed it to his thirty cows and two horses. The cutting and feeding was continued all through the summer to this same number of stock, and the alfalfa so gained on its consumption by them that at the beginning of winter he found he had eighteen tons of good hay stored away for winter use, and his cows were in good condition, as also his span of horses. He cuts the grass as it commences blossoming, finding by many experiments that at this stage it gives the best results of butter as well as of beef. The butter was sold close at home and consumed there, and he never heard of any objection on account of taint of the milk. In the spring of eighteen hundred and seventy-eight he increased the number of cows in his dairy to thirty-two, and kept the same number of horses constantly, and some transient horses. He also increased the number of acres of alfalfa, which he fed in the same way to thirty-three cows. This year, after keeping his cows and horses in good

condition all summer, he has laid in thirty tons of good hay to keep them on the coming winter.

Mr. Nason's land is on the rich bottoms of the San Felipe River, and especially adapted to the production of alfalfa in great abundance, and to this mode of feeding.

These experiments are a strong recommendation of alfalfa as feed for dairy cows, and of the system of feeding it by soiling.

We commend the statement to all dairymen on the Sacramento River, whose lands are equally well adapted to alfalfa and soiling it for cows.

ANNUAL MEETING.

The State Agricultural Society held its annual meeting at Central Hall, on K Street, between Seventh and Eighth Streets, on Tuesday, January twenty-eighth, eighteen hundred and seventy-nine.

At three o'clock P. M. President Boruck called the meeting to order and stated the objects of the meeting, adding his heartfelt thanks to the Society for having honored him with the presidency during the past year. He appreciated the high honor conferred on him, and trusted that he returned the office without spot or blemish. He then read the law of the State under which the meeting is held, and by which District Societies had representation in the meeting, which, in the law, is termed a Convention. He called attention to the fact that the election about to be held was to be conducted under the laws of the State regarding elections, and that all penalties specified in that law applied to the elections of the Society as to bribery and other crimes. He then proceeded to read the report of the Directors, and when partly through, on motion of L. J. Rose, of Los Angeles, the further reading was suspended. The financial report was submitted, and both reports ordered printed in the Journal of Transactions.

Nominations were then declared in order for President.

Honorable Grove L. Johnson, in a few hearty, complimentary remarks, nominated Jerome C. Davis.

R. O. Cravens nominated Honorable Hugh M. Larue, and eulogized the nominee in a brief and earnest speech.

The announcement of the names of the nominees were greeted with applause.

Dr. Manlove seconded the nomination of Mr. Larue.

The nominations were then closed, and the Chair named as tellers Honorable Marion Biggs, L. U. Shippee, Honorable F. O. Townsend, and C. M. Chase.

The members of the Society then balloted, with the following result:

Total vote.....	391
Necessary to a choice.....	196
Mr. Larue received	228
Mr. Davis received	163

Mr. Larue was declared elected.

Mr. Larue, amid loud applause, was called for and took the chair. He made a few remarks, stating that he had been twenty-nine years an agriculturist, and promising faithfulness and activity in the office intrusted to him, and asking for the aid of the people and Directors in advancing the interests of the State Agricultural Society.

R. O. Cravens introduced the following resolution, which was unanimously adopted:

Resolved, By the State Agricultural Society, in Annual Convention assembled, that the thanks of this Society are due and hereby tendered to Honorable M. D. Boruck, late President of this Society, for the able and efficient manner in which he has conducted the affairs of this Society during the year eighteen hundred and seventy-eight, and for the administrative energy which resulted in the unprecedented success which attended the annual exhibition of that year.

Mr. Boruck was called for, and returned his thanks to the Convention. He said no change of administration would change him toward the Society. His friendship for the Society was a thrice told tale, so well known is it. He hoped always to be the tenth Director, and pledged himself to give his support and aid to the State Agricultural Society.

The election of Directors was then entered upon, President Larue in the chair.

Honorable Creed Haymond, of Sacramento, nominated for the long term L. J. Rose, of Los Angeles, and enlarged upon the policy and justice of giving the great south of California representation upon the Board, and upon the representative character of Mr. Rose. Honorable Marion Biggs, of Butte, seconded and indorsed the nomination warmly.

C. M. Chase, of San Francisco, nominated P. A. Finnegan, of San Francisco, and eulogized him, and asked that San Francisco have a member on the Board.

H. R. Covey, of San Francisco, nominated Henry Schwartz, of San Francisco.

Mr. Schwartz withdrew and advocated the election of Mr. Rose.

Mr. Rose said such magnanimity was too great a sacrifice, and besought Mr. Schwartz to remain in the field.

Honorable Grove L. Johnson, of Sacramento, nominated G. W. Carey, of Sacramento, and spoke of his merits in warm terms.

Mr. Baker, of Yolo, nominated R. H. Newton, of Yolo, and enlarged upon his superior executive ability.

W. R. Cantwell, of Sacramento, nominated Honorable Christopher Green, of Sacramento, and eulogized him.

Senator Murphy, of Santa Clara, nominated Cyrus Jones, of Santa Clara, and hoped for the interests of the Society that he would be chosen.

G. W. Carey withdrew his name.

Honorable Grove L. Johnson nominated G. W. Hancock, of Sutter, and dwelt upon his fitness for the position.

Mr. Green withdrew his name.

Mr. Chase withdrew the nomination of P. A. Finnegan.

J. J. Green objected to the withdrawal, and said San Francisco must be represented on the Board.

Mr. Chase said he did not want his candidate slaughtered, as it looked that that would be the result.

Judge Cantwell asked if Mr. Jones was the same gentleman of that name who opposed State aid to the Society when in the Legislature.

Captain Haney said Mr. Jones opposed a separate bill giving sixteen thousand dollars in aid of the State Society, because he preferred a bill giving that aid to the State Society and also giving aid to the District Societies.

Major Biggs, in an extended and impassioned speech, opposed Mr. Jones, because of his opposition to the bill of the State Society for State aid to pay a debt incurred for improvements on State property, and for which individual Directors had become personally responsible.

Mr. Jones replied, and said he had voted for State aid to pay the debt, but was instructed by his constituency to support no bill of the kind unless District Societies were also aided. The committee reported the bill he supported, and returned the bill giving the State

Society aid alone without recommendation. He had favored the State paying the debt, and had always been and now was a friend of the Society.

By this time much feeling had been made manifest, and it was with great difficulty that the Chair could keep order; indeed, order had ceased to be the rule.

J. J. Green nominated Mr. Finnegan, of San Francisco, for the short term.

J. T. Carey nominated Mr. Finnegan for the long term, whereat the disorder broke into open confusion, and a babel of cries and shouts went up and a dozen men struggled for the floor, while the Chairman hammered his desk constantly, and called for order, without the slightest effect. The nominations were now closed.

A motion to adjourn till ten o'clock Wednesday, January twenty-ninth, caused a storm of cries of "No, no, no," and "Yes, yes," to break forth, and on the vote being taken, scores of men gesticulated frantically, and yelled, and shouted like mad. There were motions to reconsider the order closing the nominations, calls for division, motions to adjourn, and motions to go to ballot for all four Directors at once, a similar motion to the latter having already prevailed. Thereupon another storm broke forth, and the assemblage roared and shouted in the most astonishing and tempestuous manner, while a score of men frantically yelled "Division," "Adjournment," "Vote," "Mr. President," "No bulldosing," "What's the matter with you," etc., mingled with shouts and yells that would have disgraced a ward meeting of the hottest kind.

Messrs. Haymond, Hancock, William Johnson, J. J. Green, Bulard, Biggs, Boruck, and others tried to pour oil on the troubled waters, but it only took fire, and the sea of wrangling men but blazed the more furiously. J. T. Carey at last got the floor and made a long speech in favor of Mr. Finnegan, and then, after the lull, the storm broke out afresh. A dozen men surrounded the President to advise him, while the crowd grew more unruly than ever. The singularity of it all was that the Convention was composed quite largely of citizens of middle age, and of unusually staid demeanor. Various attempts to settle a dispute as to whether Mr. Finnegan was in nomination for the short or the long term were made amidst the wildest confusion. Finally the Chair held Mr. Finnegan was in nomination for both positions. R. S. Carey spoke from the platform, and urged Mr. Finnegan for the long term. He was interrupted frequently, and rousing from a brief respite the assemblage entered upon another scene of confusion and uproar. The Chair and several speakers besought the members to pause, think, and act like men, and not disgrace themselves, but heated blood prevailed and the confusion went on about motions and points of order, yells, cries, cheers, and roars being interjected, each side trying to outvote the other by loudness in vociferating "aye" or "no." Finally Jerome C. Davis got a motion to adjourn until morning before the body, and it was voted down. Senator Murphy, Judge Welty, J. J. Green, Creed Haymond, M. D. Boruck, and others spoke for peace, but with little effect. J. T. Carey at last got on the stage, but the assemblage refused to hear him. Finally, after over an hour of wrangle, the meeting voted by a very large majority to proceed with the election, and reconsidered the order made to vote for the four Directors at one time—Honorable William Johnson, of Richland,

being the last to speak, and beseeching the people, in the name of manliness, to put a stop to the disorder. Several policemen about this time appeared on the scene, and quiet was restored. Three Directors for the long term were balloted for, with the following result:

Total vote	285
Necessary to a choice	143
Hancock, of Sutter	207
Newton, of Yolo	204
Rose, of Los Angeles	243
Schwartz, of San Francisco	6
Finnegan, of San Francisco	93
Jones, of Santa Clara	1
Carey, of Sacramento	1

The three first named were declared elected.

The order then was to choose one Director for the short term.

Mr. Chase withdrew the name of Mr. Finnegan.

Major Biggs renominated Mr. Finnegan.

By this time darkness having set in, and the gas having once been turned off, and again turned on, many departed, and the Convention settled down and balloted speedily.

Total vote	185
Necessary to a choice	93
Jones of Santa Clara	102
Finnegan of San Francisco	83

Mr. Jones was declared elected.

On motion of Major Biggs, the election of Mr. Jones was made unanimous, and the Convention adjourned.

During the hubbub, which is but faintly outlined above, so many motions were made, and points raised, and suggestions interjected, that it was impossible to keep track of them and give due credit; but the reporter's note books show that Messrs. C. M. Chase, E. G. Blessing, Major Biggs, Jerome C. Davis, J. T. Carey, W. R. Cantwell, I. N. Hoag, Creed Haymond, Frank Thompson, Judge Welty, J. R. Johnston, J. S. Woods, J. J. Green, Fred. Cox, W. C. Van Fleet, W. H. Lee, and Henry Schwartz, and twice as many more, made motions or points of some kind, and they can divide them up to suit their convenience, as no intelligible minutes of most of the proceedings can be made at this time. It is fair to say that the election once over, the members mingled together apparently in the most amicable manner, and viewed the whole meeting as a very lively one, as it certainly was.

At eight o'clock P. M. the new Board met, President Larue in the chair; and Directors Flint, Coleman, Shippee, Colby, Newton, Rose, Hancock, Perkins, and Jones, a full Board, present.

On motion of Mr. Rose, the salary of the Secretary was fixed at fifteen hundred dollars a year—with an allowance of ninety dollars for an assistant for one month during the year. The Treasurer's salary was fixed at one hundred and fifty dollars a year.

MEETING OF THE BOARD.

The election of Secretary being entered on, G. W. Gilbert and I. N. Hoag were put in nomination. It being understood that Mr. Hoag would not accept the position at the salary fixed, Mr. Gilbert was elected, the vote being six to three.

L. A. Upson was elected Treasurer.

The Secretary's bond was fixed at five thousand dollars, and the Treasurer's at ten thousand dollars.

The Secretary was instructed to draw a warrant in favor of Henry Schwartz for two hundred and fifty dollars, in lieu of plate won by Lottery by beating the record in his class at the late State Fair.

The following committees were appointed:

Finance—The President and Secretary.

Printing—Flint, President, and Secretary.

Committee on Auditing Accounts and Bills—The President, Newton, Rose, Hancock, and Coleman.

Director Flint was elected Superintendent of the Park, and Coleman Superintendent of the Pavilion.

Directors Flint, Newton, and Hancock were appointed a committee to make an inventory of the property of the Society; also to ascertain the commercial standing of the Society, with power to appoint an expert if they shall deem it necessary.

The Secretary was instructed to invite the several District Societies to send representatives to the next meeting of the Board, for general consultation in regard to matters of mutual interest.

The Board adjourned until the last day of March, at three o'clock P. M.

RAIN-FALL FROM JUNE, 1878, TO MARCH 1, 1879.

BY SAMUEL H. GERRISH, SACRAMENTO.

June, 1878—No rain this month.

July, 1878—No rain this month.

August, 1878—No rain this month.

September, 1878—17th, sprinkle; 26th, sprinkle; 28th, 0.178; 29th, 0.027; 30th, 0.116. Total for month, 0.321 of an inch.

October, 1878—12th, sprinkle; 14th, 0.351. Total for month, 0.351 of an inch.

November, 1878—4th, 0.039; 11th, 0.047; 12th, 0.103; 14th, 0.355; 15th, 0.004. Total for month, 0.548 of an inch.

December, 1878—5th, 0.053; 6th, 0.008; 7th, 0.009; 9th, 0.046; 30th, 0.008; 31st, 0.364. Total for month, 0.488 of an inch.

January, 1879—1st, 0.046; 9th, 0.044; 11th, 0.570; 12th, 0.054; 13th, 0.014; 14th, 0.612; 17th, 0.119; 22d, 0.030; 23d, 0.852; 24th, 0.506; 25th, 0.327; 26th, 0.138; 28th, 0.046. Total for month, 3.359 inches.

February, 1879—8th, 0.372. 9th, 0.930; 10th, 0.076; 11th, 1.184; 12th, 0.476; 13th, 0.028; 15th, 0.294; 16th, 0.218; 17th, 0.193; 18th, 0.005. Total for month, 3.776 inches.

Total fall for season to March 1st, 8.823 inches.

TRANSACTIONS

OF THE

SAN JOAQUIN VALLEY AGRICULTURAL SOCIETY.

1878.

REPORT.

OFFICE SAN JOAQUIN VALLEY AGRICULTURAL SOCIETY, }
STOCKTON, November 14th, 1878. }

Hon. Robt. Beck:

DEAR SIR: I have the honor to herewith transmit a list of the entries and exhibits at our last annual fair, held here September twenty-fourth to twenty-eighth inclusive, eighteen hundred and seventy-eight.

[SEAL.]

Yours truly,

J. M. LARUE, Secretary.

ENTRIES AT TRACK.

FIRST DEPARTMENT. LIVE STOCK.

CLASS I.—THOROUGHEREDS.

J. B. Hinkle, Bantas—Mare, Mollie Mack, by Norfolk.
Henry Newman, Stockton—Stallion, Starlight, by Joe Daniels.
R. W. Randall, Stockton—Mare, Black Willow, by Monday; dam, Carrie Miller.
M. C. Fisher, Stockton—Stallion, Young Prince, by Knowsley; dam, Queen of Spain.

CLASS II.—FAMILIES.

J. A. McCloud, Stockton—Mare, Beauty and four colts.
J. H. Tone, Stockton—Mare, Ellendale and four colts.

CLASS III.—HORSES FOR ALL PURPOSES.

J. H. Tone, Stockton—Three-year old mare, Ellendale, by Owendale.
J. H. Tone, Stockton—Three-year old mare, —, by Norfolk.
J. H. Tone, Stockton—Two-year old mare, Maggie Early, by Joe Daniels.
J. H. Tone, Stockton—Suckling colt, by Time.
A. Girard, Stockton—Stallion, Bismark, four years old.
A. Girard, Stockton—Suckling colt.
P. Fee, Stockton—Stallion, John Miller.
J. H. Tennant, Contra Costa County—Pinole Patchen.
D. M. Burge, Stockton—Suckling colt.
D. M. Burge, Stockton—Two-year old stallion, Sargent.
J. Grider, Stockton—Two-year old stallion, Chieftain Junior.
L. M. Gillham, Merced—Stallion, Oregon George.
J. B. Hinkle, Bantas—Suckling colt.
J. Laswell, Stockton—Filly, Lady Hardwood.
M. Walrod, Stockton—Stallion, Napoleon.
J. A. McCloud, Stockton—Suckling colt, Butterwood.
W. E. Morris, Stockton—Stallion, Upright, by Whipple; Hambletonian dam, Gilroy Belle.
L. U. Shippee, Stockton—Stallion, Henry Clay, by David Hill.
L. U. Shippee, Stockton—Suckling colt.
L. U. Shippee, Stockton—Mare, Dolly.
Dr. C. Grattan, Stockton—Stallion, King.

CLASS IV.—ROADSTERS.

- Wm. Johnson, Grayson—Two-year old mare, Fanny, by Winthrop.
 Wm. Johnson, Grayson—Mare, Little Vic, by Winthrop.
 John Patterson, Stockton—Stallion, Frank Hunter.
 Jas. M. Learned, Stockton—Stallion, Reliance.
 Jas. M. Learned, Stockton—Mare, Magdallah.
 L. U. Shippee, Stockton—Three-year old, Billy.
 W. R. Ledbeater, Stockton—Capt. Lewis.
 J. A. McCloud, Stockton—Matched roadsters, Daisy and mate.
 J. A. Louttet, Stockton—Three-year old mare, Medora.

CLASS V.—DRAFT HORSES.

- J. Cowell, Stockton—Stallion, Tom Boulogne.
 J. Cowell, Stockton—Suckling colt.
 P. Fee, Stockton—Stallion, Ontario.
 J. B. Smith, Stockton—Stallion, Sam Tilden, two years old.
 M. Walrod, Stockton—Stallion, French Emperor.

The committee recommended a special premium to Andrew P. Hill, San José, for a magnificent display of oil paintings, which made one of the most attractive features of the whole exhibition.

To the Board of Managers of the San Joaquin Valley Agricultural Society:

Your Committee on Miscellaneous Exhibits recommend special premiums of a framed diploma or Society's medal to the following exhibits, which are worthy of particular notice for their excellence:

Perkins Brothers, Stockton, for exhibit from the Pacific Rubber Paint Company.

Mrs. P. T. Butler, aged over eighty years, for three pair of knit socks.

Mrs. W. W. Whitman, Oakland, for kettle scraper and fish cleaner.

Mrs. T. A. Wilson, Grayson, for retouched photographs.

G. N. Milco, Stockton, for exhibit of buhach, buhach seed, plants, etc.

G. N. Milco, Stockton, for exhibit of insufflators.

May Summerville, Stockton, for display of fancy work and splint basket.

Alonzo Rhodes, Stockton, for mineral cabinet.

J. P. Shaver, Stockton, for card of American coins.

E. H. Boscher, Stockton, for display of druggists' sundries, and ague remedy, Leroy.

C. A. Aldrich, Oakland, for hygienic water filters and coolers.

Mrs. Jas. Littlehale, for exhibit of panel picture, fruit in oil, basket scent satchels painted on silk, in water colors, and wood table, decorated in water colors.

Jas. Littlehale, for Boswell patent combined fruit dryer, cooker, baker, and heater.

Hattie West, for four specimens of painting on pottery.

John Jackson, for marbleized iron mantels.

C. Sharp, Jr., for Higgins' water motor; sewing machine attachment for darning, and sewing on buttons.

Cadien & Bagley, for display of home made underwear, etc.

Cadien & Bagley, for display of patent clinch back suspenders, forty different samples.

Mrs. Albert G. Nye, San Francisco, for display of moss pictures, moss albums, spiral baskets, and fern pictures.

C. Behrns, Stockton, for display of crockery, granite iron ware, silver ware and lamps, and patent illuminators.

Chalmers Brothers, for display of carpets, etc.

Miss McKenzie, display of gloves.

California Paper Company, for display of production of Stockton paper mill.

Dr. E. S. Holden, for eucalyptus extracts and remedies.
Geo. F. Cluff, Lodi, for combined bread board and flour chest.

WORTHY MENTION.

We recommend worthy mention of the following exhibits:

Mrs. H. A. Moore, San Francisco, for hair producer.

Mrs. W. L. Overheiser, for combined match and stamp safe.

Mrs. Jos. Hale, for spatter work cross, pebble cross, and sea moss basket.

Mrs. T. A. Wilson, Grayson, for pillow sham rod, sheet music of her own composition.

Mrs. L. Wells, for Japan silver polish and champion dish-washer.

Martha A. McCoy, for pincushion and match lighter.

M. Rosenblum, for display of gents' underwear and overalls.

W. H. Van Vlear, for rifle made by apprentice after only one year's work at that business.

C. J. Sharp, Jr., patent shoe button fastener; one bed spread, embroidered with chenille; and Buckeye hand sewing machine.

Nellie Littlehale, for specimen of painting on china.

Mrs. James Littlehale, for specimen of native gum arabic.

Wm. Graham, for display of hardware, bracket work, and jack-knife work; also, Florence oil stove.

Mrs. R. V. Hanks, for display of fancy work on card-board.

D. J. King, of No. 1117 Folsom Street, San Francisco, for automatic fountain penholder and solid ink-pen.

Mr. J. Ennor, of Santa Cruz, for an exhibition of sea mosses and moss work.

ANNUAL ADDRESS OF THE PRESIDENT.

OFFICERS AND MEMBERS OF THE SAN JOAQUIN VALLEY AGRICULTURAL SOCIETY: In accordance with a practice established by my predecessors, it is proper that I should now give you a general statement of our principal transactions during the eighteenth year of our organization.

At the commencement of the present year we were in debt eighteen hundred dollars.

The season has been favorable. The fair was the most successful one ever held by this Society, and from reports the most successful one held this year on the Pacific Coast in all respects.

Our former indebtedness has been paid. We have built fifty first-class cattle stalls, ten new horse stalls, and a number of new sheep and hog pens. Shade trees have been planted. Nearly half a mile of fence was built new during the past season, of which four hundred feet is a tight board fence eight feet high. A bulkhead was built on the east end of the race track.

For these and other permanent improvements we have paid out over twelve hundred dollars, and still have nearly one thousand dollars left in the treasury.

Our track this year was in the best condition it ever was; probably none better or so fast, if any as good, exists in this State. For a great part of this you may thank our Superintendent, Mr. Briggs.

I congratulate you upon the present condition and future prospects of the Society. After paying all indebtedness we will have a balance of about six hundred dollars on hand. The State appropriation for eighteen hundred and seventy-nine is fifteen hundred dollars, making a total of about twenty-one hundred dollars in sight upon which to base operations for coming years, and if the coming fair is as successful, and we expect it will be a more successful one, we will have upwards of four thousand dollars to invest in permanent improvements.

The principal want of the Society at present is a suitable building for exhibiting household work, works of art, and such products of the soil and industry as are usually shown at a pavilion.

As a Society, we have outgrown any building that at present exists in Stockton suitable for that purpose. The want was so evident this year that serious thoughts were entertained of placing a temporary building on Hunter Street Square at an expense of some twelve hundred and fifty dollars, for use this year only.

A building for that purpose should cover a space of at least one hundred by two hundred feet. I recommend the erection of such a structure without loss of time. Address yourselves to the attainment of this object, for it is a matter of vital interest to your fairs for all time to come.

A permanent building, at least eighty by one hundred and sixty feet, placed between the grand stand and the water tank at our park, is needed for exhibiting machinery, etc.

Stock premiums were largely increased this year, and materially aided the success of our exhibition. I recommend a still further increase, not only on live stock, but in all departments.

At the fair for the year eighteen hundred and seventy-seven premiums on live stock were confined to competition of the district only. This year a large portion were thrown open to the State, the wisdom of which is shown in the result. Last year but few horned cattle were on exhibition. This year some of the finest herds in the State were here.

These fairs are neither yours or mine, but for all. The more widespread the interest taken in each annual exhibition is, the more successful will they be. Every person should be interested in their success, and the larger exhibits we have in all departments the better the attendance will be, and the more favorable the effect of our organization upon the community at large. For these reasons I recommend that competition for premiums on all live-stock be thrown open to the State.

About two hundred shade trees should be put out at the park the coming year.

The old horse stalls east of the main entrance should be torn down and replaced with such as were built this year.

From present indications, with proper management, our fair next year will be larger and more successful than it was in September last, and you can and should make all these last improvements I suggest, and besides have some two thousand dollars left to invest in a pavilion.

Our Board of Managers worked together, and worked with a will, and to this fact in a great measure is due our success. We cannot expect to succeed without unity of action.

For myself and Managers I thank the ladies, all who attended the fair and exhibited their beautiful handiwork. I thank the members, one and all, for their forbearance with me as their presiding officer, and their appreciation of my past exertions for the well-being of our Society. You are glad with me that we were so successful.

SECRETARY'S LETTER.

STOCKTON, December 19th, 1878.

Honorable Robert Beck:

DEAR SIR: With this I beg to hand you, for publication in your report for this year, a copy of our new Constitution, a record of races over our course for the year eighteen hundred and seventy-eight, our Treasurer's report, and report of financial transactions and condition of the Society December second instant.

Please return or destroy the financial statement I sent you dated November fourteenth.

Very respectfully,

J. M. LARUE, Secretary.

A. W. SIMPSON, Treasurer.

CONSTITUTION OF THE SAN JOAQUIN VALLEY AGRICULTURAL SOCIETY.

ARTICLE I.

NAME.

SECTION I. This Association shall be called THE SAN JOAQUIN VALLEY AGRICULTURAL SOCIETY.

ARTICLE II.

OBJECT.

SECTION 1. The objects of this Society are the encouraging and aiding the development of the soil, domestic manufactures, mechanics, general domestic industry, stock raising, trial of speed of horses, etc., and the dissemination of useful information on these subjects.

ARTICLE III.

DISTRICT.

SECTION 1. This Agricultural District shall embrace the Counties of San Joaquin, Calaveras, Tuolumne, Mariposa, Merced, Tulare, Stanislaus, Fresno, and Kern; *provided*, such Counties shall voluntarily unite in forwarding the objects for which this Society organized.

ARTICLE IV.

MEMBERSHIP—ANNUAL MEMBERS.

SECTION 1. Any person, by paying to the Secretary the sum of five dollars, may become a member for the current year, and all annual memberships shall expire on the thirty-first day of December of that year.

LIFE MEMBERS.

SEC. 2. Any person may become a member for life, by paying to the Secretary the sum of fifty dollars.

HONORARY MEMBERS.

SEC. 3. The Society, or its Board of Managers, may elect two or more honorary or corresponding members from each county in the district, who shall enjoy all the privileges of the Society, except voting and holding office.

PRIVILEGES OF MEMBERS.

SEC. 4. Any citizen of this district, being a member of this Society, shall be entitled to one vote and no more, and it shall not be admissible for any member to vote by proxy in any meeting of the Society, or its Board of Managers; shall be eligible to office; shall have free admission, accompanied by his wife and minor children, to all the exhibitions of the Society; shall be permitted to compete for premiums in any or all departments—all under the rules of the Society or its Board of Managers.

EXPULSION OF MEMBERS.

SEC. 5. Any member who shall present for exhibition, any article or animal which he is not entitled by the rules of the Society to exhibit, or who shall attempt to deceive, or be guilty of a breach of good faith toward the Society, may be expelled by a vote of two-thirds of the members present at any meeting of the Society; *provided*, that no member shall be expelled unless written notice of the alleged offense, shall have been in person, served on, or left at the usual place of residence of such member, at least twenty days previous to the action.

ARTICLE V.

OFFICERS.

SECTION 1. The officers of this Society shall consist of a President and six (6) Directors, (to be elected in accordance with the law), all of whom shall be members of the Society, and residents of the District, during all their term of office, and they shall each hold office until their successor is elected and qualified.

BOARD OF MANAGERS.

SEC. 2. The said officers shall constitute the Board of Managers of the Society. In such Board shall be vested (except as otherwise herein provided), all the powers and duties of this Society. A majority of the Board shall constitute a quorum to do and transact business. It shall, at its first meeting after the annual meeting of the Society, elect a Treasurer and Secretary, not members of the Board, prescribe their duties, and fix their pay for the current year.

DUTIES OF THE BOARD.

SEC. 3. The Board of Managers shall have the general and financial management of all the affairs of the Society in the interim of annual meetings, but it shall not create any liability or liabilities which in the aggregate exceeds one thousand dollars, after the financial transactions of each annual fair have been closed. It shall fill all vacancies occurring between elections, and make the necessary preparations and arrangements for all meetings, fairs, etc. The Board shall also have power to make its own by-laws, rules, and regulations (not inconsistent with this Constitution), and arrange the time and place of its own meeting. It shall appoint all such standing committees, including a finance committee, as it may deem expedient; and such standing committees shall consist of three or more members of the Board.

DUTIES OF THE PRESIDENT.

SEC. 4. The President shall preside at all meetings of the Board or of the Society; have power to call special meetings of the Board, and at the written request of fifteen members, shall call extra meetings of the Society; shall appoint all other meetings not otherwise provided for; shall vote only at the elections of officers, and in case of a tie, and shall sign all documents emanating from the Board or Society not otherwise provided for by the Board of Managers and this Constitution. In the absence of the President from any meeting of the Board or Society, any Director may be called to the chair, and during such meeting and for the completion of any business transacted at the same, shall have the same powers as the President.

ARTICLE VI.

MEETINGS AND EXHIBITIONS—MEETING.

SECTION 1. The next annual meeting of this Society shall be held at Stockton, California, on the second Saturday in January, of the year eighteen hundred and eighty, and at the same time and place each succeeding year, notice of which shall be given in a daily Stockton newspaper, at least twenty days prior to such meeting, at which time all the officers and committees from whom reports of the preceding year's services are required, shall present the same. All officers required by law for the ensuing year shall, at said meeting, be elected by ballot only. No special meeting of the Society shall be called but upon fifteen days' notice in the columns of one or more daily newspapers published in Stockton—nor without a request signed by at least fifteen members of the Society. At any meeting of the Society, twenty-one members shall constitute a quorum.

EXHIBITIONS.

SEC. 2. The Society shall hold (or not, at the discretion of its Board of Managers), an annual fair and cattle show in the City of Stockton and at the Society's grounds, and may, by direction of the Board, hold such other exhibitions as it may deem conducive to the interests of the Society.

ARTICLE VII.

AMENDMENTS.

SECTION 1. An amendment to this Constitution must be presented in writing at an annual meeting, when it shall be read; and if, after due discussion has been allowed, five-sixths or more of all the votes present are in favor of the amendment, it shall be adopted and become a part of this Constitution. If less than five-sixths, but one-half or more, of all the votes present are favorable to the amendment, it shall be spread upon the minutes of the meeting and lay over until the next annual meeting, at which time it shall be considered, and if two-thirds of all the members present vote for the amendment, it shall be adopted and become a part and parcel of this Constitution.

ARTICLE VIII.

EFFECT.

SECTION 1. This Constitution shall be in force from and after its adoption.

I hereby certify that the foregoing is a full, true, and correct copy of the Constitution of the San Joaquin Valley Agricultural Society, as adopted at the annual meeting of said Society, held at Stockton, California, on the seventh day of December, A. D. eighteen hundred and seventy-eight.

Attest:

J. M. LARUE, Secretary.

OFFICERS ELECTED.

Stockton, December 14th, 1878.

Honorable Robert Beck, Secretary State Board of Agriculture:

DEAR SIR: Please take notice that the officers elect of the San Joaquin Valley Agricultural Society, for the year eighteen hundred and seventy-nine, are as follows:

President—L. U. Shippee.

Directors—John E. Moore, R. C. Sargent, J. A. Shephard, Fred. Arnold, H. W. Weaver, J. A. Louttit.

Officers of the Board of Managers—A. W. Simpson, Treasurer; J. M. LaRue, Secretary.

Address—P. O. Box 188, Stockton, California.

Respectfully,

J. M. LARUE, Secretary.

- Best stallion of any age or breed, Granger, owned by J. A. Evans, first premium, \$30.
 Best mare of any age or breed, Mamie Hall, owned by William H. Hall, first premium, \$15.

HORSES FOR ALL PURPOSES.

- Best stallion for all purposes, Royal George, owned by Cal. Martin, first premium, \$30.

FAMILIES.

- Best stallion with four or more of his colts, Ethan Allen and four colts, owned by W. T. Moson, first premium, \$30.
 Best mare with four or more of her colts, Mamie and four colts, owned by William Boots, first premium, \$15.

JACKS.

- Best jack, Smuggler, owned by R. J. Saxe, first premium, \$10.

DURHAM CATTLE.

- Best bull, four years old and over, Mason Duke, owned by C. B. Hensley, first premium, \$20.
 Red Thorndale, owned by Coleman Younger, second premium, \$10.
 Best bull, three years old, Airdrie Thorndale, owned by Coleman Younger, first premium, \$20.
 Duke of Gabilan, owned by J. D. Carr, second premium, \$10.
 Best bull, two years old, Sixth Duke of Gabilan, owned by J. D. Carr, first premium, \$20.
 Oxford Duke, owned by Jones & Hagen, second premium, \$10.
 Best bull, one year old, First Duke of Alameda, owned by Jones & Hagen, first premium, \$15.
 Maynard, owned by J. D. Carr, second premium, \$7.
 Best bull calf, Thornhill, owned by Coleman Younger, first premium, \$10.
 Mason Duke 2d, owned by Jones & Hagen, second premium, \$5.
 Best cow, three years old, First Louan of Avenue Ranch, owned by Jones & Hagen, first premium, \$20.
 First Golden Gate, owned by Coleman Younger, second premium, \$10.
 Best cow, two years old, Dolly Thorndale, owned by Coleman Younger, first premium, \$20.
 Second Rose Forest Home, owned by Coleman Younger, second premium, \$10.
 Best cow, one year old, Red Dolly 2d, owned by Coleman Younger, first premium, \$15.
 Jessie Maynard, owned by Jones & Hagen, second premium, \$10.
 Best heifer calf, Fourth Rosa Nell, owned by Coleman Younger, first premium, \$10.
 Lady Mary 2d, owned by Jones & Hagen, second premium, \$5.

HEREFORDS AND HOLSTEINS.

- Best bull calf, Snow Boy, owned by Peter Coutts, first premium, \$10.

DEVONS.

- Best cow, three years old and over, Nellie, owned by Francis Smith, first premium \$10.

ALDERNEYS AND AYRSHIRE.

- Best bull, three years old, Scarboro Chief, Ayrshire, owned by Peter Coutts, first premium, \$10.
 Prince, Alderney, owned by C. B. Polhemus, first premium, \$10.
 Fair Oaks, Alderney, owned by John Cooney, second premium, \$5.
 Best bull, two years old, Adonis, Ayrshire, owned by Peter Coutts, first premium, \$10.
 Dan Hinckley, Alderney, owned by F. Smith, first premium, \$10.

Best bull, one year old, Brigham, Alderney, owned by C. B. Polhemus, first premium, \$8.
 Frank Smith, owned by W. T. Moson, second premium, \$4.
 Best bull calf, General Sherman, owned by Peter Coutts, first premium, \$5.
 Best cow, three years old, Maggie Douglass, owned by Peter Coutts, first premium, \$10.
 Linda Douglass, owned by Peter Coutts, second premium, \$5.
 Bessie, owned by C. B. Polhemus, first premium, \$10.
 Lulu, owned by F. Smith, second premium, \$5.
 Best cow, two years old, Edith Brown, owned by Peter Coutts, first premium, \$10.
 Bellina, owned by Peter Coutts, second premium, \$5.
 Daisy, owned by C. B. Polhemus, first premium, \$10.
 Best cow, one year old, Lady Chapman 4th, owned by Peter Coutts, first premium, \$8.
 Lady Merryton 2d, owned by Peter Coutts, second premium, \$4.
 Topsy, owned by C. B. Polhemus, first premium, \$8.
 Dew-drop, owned by C. B. Polhemus, second premium, \$4.
 Best heifer calf, Fiami, owned by Peter Coutts, first premium, \$5.
 Edna Brown, owned by Peter Coutts, second premium, \$3.

SWEEPSTAKES.

Best bull of any breed or age, Sixth Duke of Monterey, owned by J. D. Carr, first premium, \$30.
 Mason Duke, owned by C. B. Hensley, second premium, \$15.
 Best cow of any breed or age, Fuchsia 2d, owned by William Quinn, first premium, \$30.
 First Louan of Avenue Ranch, owned by Jones & Hagen, second premium, \$15.
 Best dairy cow, Linda 3d, owned by Peter Coutts, first premium, \$10.
 Best cow, with calf by her side, Third Maid of Monterey, owned by J. D. Carr, first premium, \$20.
 Maggie Pearce, owned by Peter Coutts, second premium, \$10.

GRADED CATTLE.

Best cow, three years old and upwards, Fanny Forester, owned by A. Agnew, first premium, \$15.
 Big Baby, owned by N. B. Edwards, premium recommended.
 Best cow, two years old, Mary, owned by Wm. Quinn, first premium, \$10.
 Best cow, one year old, Irene, owned by A. Agnew, first premium, \$5.

HERD OF CATTLE.

Best herd of cattle, two years old and upwards, not less than one male and four females, owned by one person, Sixth Duke of Gabilan, and four cows, owned by J. D. Carr, first premium, \$40.
 Red Thorndale and four cows, owned by Coleman Younger, second premium, \$20.
 Best herd, one year old and upwards, 1st Duke of Alameda, owned by Jones & Hagen, \$20.
 Best bull of any breed or age, with four or more of his calves, Master Maynard, owned by Jones & Hagen, \$20.

- Best exhibit of tin and copper ware, James J. White, \$15.
Best stove and range, James J. White, diploma.
Committee recommend special premium to James J. White for galvanized cornice.

POTTERY.

- Best exhibit of stone-ware and pottery, J. Steiger, \$10.

DOMESTIC MANUFACTURES.

- Best exhibit of hats and caps, J. S. Woods, \$5.
Best exhibit of gloves, the Angora Robe and Glove Company, \$10.
Best home-made cotton stockings, Mrs. G. P. Beal, \$2.
Best exhibit of white shirts and underwear, home manufacture, Charles Ruff, special premium recommended.
Best cotton bed quilt, Miss Sarah Keeler, special premium recommended.
Best patch quilt, Mrs. S. Brown, \$5.

CABINET WARE.

- Best exhibit of set parlor furniture, Bennett, Patterson & Company, \$10.
Best exhibit of chamber furniture, Bennett, Patterson & Company, \$10.
Best exhibit of upholstery, Bennett, Patterson & Company, \$10.
Best parlor bedstead, F. W. Wolff, honorable mention.

FARM PRODUCTS.

- Best two sacks of wheat, E. H. Lenox, \$5.
Best two sacks of oats, Jesse Hobson, \$5.
Best two sacks of barley, Frank Hamilton, \$5.
Best two sacks of California rye, Frank Hamilton, \$5.
Best exhibit of flour, Moody Brothers, \$10.
Best exhibit of flaxseed, Isaac Dixon, \$5.

FARM PRODUCTS—SECOND DIVISION.

- Best exhibit of salt pork, dried beef, hams, bacon, and lard, Andrews & Coykendall, \$5 each.
Best exhibit of peppermint oil, F. Hamilton, \$5.
Best exhibit of olive oil, J. B. Ruffino, diploma.

GARDEN PRODUCTS.

- Best tomatoes, W. E. Beckwith, \$2.
Best Fulton potatoes, Andrews & Coykendall, \$2.
Best cantelope, W. E. Beckwith, \$2.
Best one sack of onions, W. Boots, \$2.
Best squash, cucumbers, and turnips, W. E. Beckwith, each \$2.

FRUITS.

- Best currants, Frank A. Wilcox, \$2.
Best barberries, F. Wilcox, \$2.
Best collection of foreign grapes, J. H. Dixon, \$10.
Best three kinds of peaches, Mrs. Sarah Keeler, \$5.
Best strawberries, W. Boots, \$5.
Best ten varieties of apples and five varieties of pears, G. P. Beal, \$5.
Best twelve varieties of pears, L. H. Bascom, \$10.
Best single bunch of foreign grapes, J. J. Roberts, \$2.
Best quinces, L. H. Bascom, \$2.
Best pippin apples, D. E. Gish, \$5.
Best collection of grapes, J. H. Kelly, \$10.
Best cherries, Allen Flickinger, \$2.
Best seventeen single varieties of apples, W. Boots, \$5.
Best five varieties of plums, W. Boots, \$5.

DOMESTIC CANNED FRUITS.

- Best exhibit of domestic canned fruits, five varieties, Mrs. L. J. Watkins, \$10.
Best exhibit of sweet pickles, Mrs. L. J. Watkins, \$3.
Best exhibit of pickles, T. D. Appleby, \$3.
Best exhibit of fruit, hermetically sealed in glass, San José Fruit Packing Company, \$15.

PRESERVES AND JELLIES.

- Best exhibit of jellies, Mrs. G. K. Hostetter, \$5.

NUTS.

- Best English walnuts, D. B. Moody, \$2.
 Best black walnuts, L. H. Bascom, \$2.
 Best soft-shell almonds, E. L. Wright, \$2.
 Best hard-shell almonds, Miss Ella L. Hills, \$2.
 Best chestnuts, A. M. Ogier, \$2.

PLANTS AND FLOWERS.

- Best greenhouse plants, Jackson Lewis, \$25.
 Best hanging basket, Mrs. Jackson Lewis, \$2.
 Best collection of cut flowers, Mrs. W. H. Lattin, \$5.
 Best collection of roses and dahlias, Mrs. W. H. Lattin, \$5.
 Best three vases and bouquets, Mrs. W. H. Lattin, \$3.
 Best parlor bouquets, Mrs. Jackson Lewis, \$3.
 Best collection of assorted plants, T. D. Appleby, \$5.
 Best exhibit amateur of flowers, T. D. Appleby, \$5.
 Best exhibit of hand bouquets, T. D. Appleby, \$2.
 Best exhibit of hardy ornamental plants, Wm. O'Donnell, \$25.
 Special mention made of mammoth sunflower, by Mrs. L. J. Watkins.
 Wm. O'Donnell, special premium recommended for fruit trees.

NATIVE WINES AND LIQUORS.

- Best two kinds of wine and cider vinegar, J. H. Kelly, \$2.

DAIRY PRODUCE.

- Best exhibit of cheese, Isaac Dixon, \$2.
 Best five rolls or more of butter, Miss Amanda Rogers, \$2.
 Best case of comb honey, W. Erksen & Company, honorable mention.
 The Committees awarded first premiums for butter and cheese to Wm. Erksen & Company, but as the articles were not entered in the name of the producer they could not compete.

BREAD AND PASTRY.

- Best six loaves of baker's bread, C. McGettigan, \$5.
 Best biscuit, Miss Della Rogers, \$2.
 Best soda biscuit, Mrs. H. E. Hills, \$2.
 Best corn bread, Mrs. H. E. Hills, \$2.
 Best domestic brown bread, Mrs. I. A. Wilcox, \$2.
 Best wheat bread, Mrs. L. J. Watkins, \$2.
 Best exhibit of pastry, Mrs. J. H. Kelly, \$5.
 Best Boston brown bread, Mrs. F. Smith, \$2.
 Best exhibit of cakes, three kinds, Miss Emily L. Peelor, \$5.

EMBROIDERY, NEEDLE, AND FANCY WORK.

- Best embroidered net dress, Miss Eva Bascom, premium recommended.
 Best exhibit of spatter work, Miss Abby Lewis, \$2.
 Best table cloth, Mrs. C. F. Willey, \$2.
 Best lambrequin, Mrs. C. F. Willey, premium recommended,
 Best worsted work, Mrs. C. F. Willey, \$2.
 Best sea moss album, Mrs. Albert G. Nye, diploma recommended.
 Best chenille work, F. W. Wolff, \$2.
 Best work in card-board, five articles, Mrs. J. J. Hyde, \$2.
 Best embroidery, screen, Emma Gambert, \$2.
 Best robe and mat, Angora Robe and Glove Company, \$2.
 Best pair of tidies, Mrs. C. B. Turner, \$2.
 Best hand sewing, Mrs. C. B. Turner, \$2.
 Best cambric embroidery, Mrs. W. C. Wilson, \$5.
 Best exhibit of knitting, Mrs. E. P. Beal, \$2.
 Best silk quilt, Mrs. V. C. Mason, \$2.
 Best improvement in the manufacture of shirts, Charles Ruff, premium recommended.
 Best tapestry work, Teresa Wood, \$2.
 Best display of bead work, Mrs. E. L. Bradley, \$5.
 Best display of crochet work, F. Lascano, \$2.
 Best cotton tidy, Mrs. C. B. Turner, \$2.
 Best sofa cushion, Mrs. E. L. Bradley, \$2.
 Best feather work, Miss Libbie Soderer, \$2.
 Best wax work, Mrs. L. M. Curtis, \$5.
 Best hair wreath, Miss M. S. Swope, \$2.
 Best point lace handkerchief, ties, and cuffs, Mrs. O. S. George, diploma.
 Best skeleton leaf work, Jennie C. Gould, \$2.
 Best worsted work, Mrs. Charles Barr, \$2.
 Best lace netting, Miss Lucy Elitch, \$2.

Best hair wreath, Miss Lucy Elitch, diploma.

 Dr. J. Savidan, ointments, etc., for horses and cattle, diploma.
 E. Sourrisseau, exhibit of guns, cutlery, etc., diploma.

SPECIAL.

Miss Lauretta Lovell, best calico dress, \$10.

MISCELLANEOUS.

In closing this report, we would only say that the exhibition of eighteen hundred and seventy-eight will compare favorably with any of the preceding years. Owing to the excitement over the rumor of that fatal disease, the glanders, being prevalent in some parts of the county, the exhibition of horses was not as large as usual, while on the contrary the exhibits of cattle were greatly in excess. In this latter department we notice a considerable interest manifested in Ayrshire cattle, and a fine herd was exhibited by Peter Coutts of Mayfield. This is the first time that this grade of cattle has been shown at our fairs. The Durham and Alderney grades show considerable improvement over former years.

GOATS, SHEEP, AND SWINE.

In these departments there was but little interest manifested, and but few entries, the reason for which we are unable to state. The Angora goat industry is assuming large proportions, and we expect at our future fairs to see full exhibits in this class.

AT THE PAVILION.

The display of articles at the Pavilion was about as usual.

In the fruit department there were but few entries, owing to the lateness of the season. Among the most praiseworthy exhibits was that made by the San José Fruit and Packing Company. They made a very meritorious display of their goods. This is an industry that has grown to very large proportions, and ranks favorably with any in the State. At their manufactory they give employment to a vast force of men, women, and children.

Our San José Furniture Factory also made a good display of home-made furniture.

In fine arts the display far exceeded any of the preceding exhibitions.

THE RACES.

The trials of speed during the week were largely attended, and gave general satisfaction.

GRAND STAND.

A very elegant and commodious grand stand has just been erected. A number of persons loaned the Board of Directors one hundred dollars each, to build the stand, and agreed to take the receipts of the same, pro rata, until they were repaid. The stand cost, completed and furnished, seven thousand one hundred and forty-four dollars, and is one of the most comfortable and best arranged stands in the United States.

Knowing of nothing further to report, I remain,

Very truly, yours,

ALEX. P. MURGOTTEN, Secretary.

TRANSACTIONS

OF THE

Golden Gate District Fair Association.

1878.

REPORT.

ROOMS OF THE GOLDEN GATE DISTRICT FAIR ASSOCIATION, }
OAKLAND, December 1st, 1878. }

To the Honorable the State Board of Agriculture :

Pursuant to the provisions of an Act of the Legislature of the State of California, entitled "An Act for the encouragement of agriculture and other industries," approved March eighteenth, eighteen hundred and seventy-eight, the Directors of the Golden Gate District Fair Association respectfully submit this their report of the transactions of said Association, for the year ending this date.

The Association was organized the twenty-third day of January, A. D. eighteen hundred and seventy-eight, under the laws of the State of California, for the purpose of holding annual fairs at the City of Oakland, for the promotion and encouragement of agriculture, horticulture, mechanics, manufactures, stock raising and general domestic industry.

The first annual fair of the Association was held for and during the six days commencing Monday, September ninth, and ending Saturday, September fourteenth, this year.

The premiums offered at such fair, and the rules and regulations under which the same was held and conducted, are contained and specified in the pamphlet hereto prefixed.

The exhibits at such fair were as follows, to wit :

AT THE PARK.

SPEED PROGRAMME—1878.

FIRST DAY—MONDAY, SEPTEMBER 9TH.

No. 1—RUNNING.

Two-mile dash, free for all three-year olds; one hundred dollars entrance; fifty dollars forfeit; four hundred dollars added; second horse saves entrance money.

Entries.

NAME AND PEDIGREE OF HORSE.	By Whom Entered.	P. O. Address.
Mark L., by Monday; dam, Jennie C., by Norfolk	Henry Schwartz	San Francisco.
Lottery, by Monday; dam, Virginia, by Revenue	Geo. Treat	San Francisco.
Clara D., by Glenelg; dam, The Nun	E. J. Baldwin	San Francisco.
Jennie D., by Glenelg; dam, Reagan	E. J. Baldwin	San Francisco.

Result.

Lottery	1
Jennie D.	2

Time—3:35 $\frac{1}{4}$.

No. 2—TROTTING.

Two minutes and twenty-eight seconds class. Purse, one thousand eight hundred dollars. First horse, nine hundred dollars; second, four hundred and fifty dollars; third, two hundred and seventy dollars; fourth, one hundred and eighty dollars.

Entries.

NAME AND PEDIGREE OF HORSE.	By Whom Entered.	P. O. Address.
Rustic, by Whipple's Hambletonian; dam, —	P. J. Shafter	Olema.
Graves, by Whipple's Hambletonian; dam, —	John Williams	Sacramento.
Col. Lewis, by Rifleman; dam, —	D. Gannon	San Leandro.
Coquette, by Jack Hawkins; dam, —	O. A. Hickok	San Leandro.
Dan Gordon; unknown	J. Severs	San Ramon.
Beautiful Bells, by The Moor; dam, —	L. J. Rose	Los Angeles.

Result.

Col. Lewis	1
Graves	2
Coquette	3
Rustic	4

Time—2.24; 2:24; 2:24 $\frac{1}{4}$; 2:28.

SECOND DAY—TUESDAY, SEPTEMBER 10TH.

No. 3—TROTTING.

Two minutes and forty seconds class. Purse, one thousand dollars. First horse, five hundred dollars; second, two hundred and fifty dollars; third, one hundred and fifty dollars; fourth, one hundred dollars. (Colonel Lewis, Graves' horse, Queen, Crocker mare, and General Benton, barred.)

Entries.

NAME AND PEDIGREE OF HORSE.	By Whom Entered.	P. O. Address.

INAUGURAL ADDRESS OF DR. E. H. PARDEE,

PRESIDENT OF THE GOLDEN GATE AGRICULTURAL DISTRICT FAIR ASSOCIATION, DELIVERED SEPTEMBER NINTH, EIGHTEEN HUNDRED AND SEVENTY-EIGHT.

MEMBERS OF THE GOLDEN GATE AGRICULTURAL DISTRICT FAIR ASSOCIATION, LADIES AND GENTLEMEN: As President of the Golden Gate Agricultural District Fair Association, it becomes my duty upon this auspicious occasion to inaugurate the first annual fair of the Association with a few brief remarks.

From the earliest ages of the world the science of agriculture has received the attention of mankind, and its advancement has been made the subject of centuries of profound study, from which it has been reduced to comparatively a science.

Among the first records we have of antiquity are those bearing upon this all-important and deeply interesting subject. And throughout the ages, also, it has been customary, in the fall of the year, when the grain and the fruit had been gathered, to celebrate the event with such a degree of thanksgiving and rejoicing as the abundance of the crops might justify.

In the annals of the ancient Jews, the Greeks, the Romans, and in fact all the nations who have left any records upon the pages of history, we find the same attention and prominence given to this subject.

In our own era, and especially in our own beloved country, the annual agricultural fair has become a fixed institution. It embraces, it is true, a wide range, and aside from its name, does not pretend to confine itself to agriculture alone, but includes all industries of the husbandman, and whatever is produced by the skill and ingenuity of the human family. Yet it is the same annual gathering of the people to compare the products of their labor and rejoice together at the abundance of the yield, which has come down to us from the far distant ages of antiquity. These annual gatherings adapt themselves to the convenience of the people, to a great extent, in the area sought to be covered by them or included within the scope of their especial attention; while one general fair is held by the State at large, annually, and with a success that has warranted district and county fairs to be inaugurated in different parts of our State, that they may accommodate the masses of the people within their respective jurisdiction.

But, strange to say, until the present time, this immediate portion of our State has been neglected—has permitted less favored regions to excel it in devotion to the great interests to which we are now, for a few days, to give our attention, and accept the golden opportunity which nature has so lavishly bestowed upon us.

It is true that in San Francisco an annual exhibition of the products of industry other than those of agriculture is given under the auspices of the Mechanics' Institute; and there have usually been some spasmodic, and not altogether successful, attempts through the

medium of organized horse-racing to encourage the improvement of the breed of horses. But while we are in the midst of the greatest population, and at the very center of the wealth and enterprise of the State, with a country immediately surrounding us unsurpassed for its productiveness, or the variety and excellence of its products; while we boast that at our very doors may be profitably grown every variety of grain, fruit, or vegetable known throughout the Atlantic Coast from Nova Scotia to Florida; and with these crystalized facts hanging boldly before us, we have failed to give any particular attention to the organized encouragement of the development of our resources.

Because of this strange omission, a few enterprising gentlemen met together at the Grand Central Hotel, Oakland, several months ago, and organized the Golden Gate District Agricultural Fair Association. It was determined that the Association should embrace the three Counties of San Francisco, Alameda, and Contra Costa, in neither of which had annual fairs been successfully maintained, while at the same time it should not cut off competition with all other parts of the State.

The gentlemen who met to consider and discuss this matter were of the unanimous opinion this golden opportunity should be accepted, and an organization was entered into without delay, taking care that their Board of Directors should embrace representatives from the three counties named. They become incorporated under the laws of the State, and appearing before the Legislature, received a portion of the bounty usually appropriated by that body for the encouragement of such enterprises.

The Golden Gate Agricultural Fair has become recognized throughout the State as an Association whose annual gatherings are to be respected and looked for from year to year with intensified interest. They have shouldered a responsibility manfully, and have prepared a list of purses and premiums for their first annual fair that is not equaled in liberality by any similar institution in the whole State; and have made arrangements for the exhibition on a broad and generous scale, conscious of the fact that the public spirit and enterprise of their fellow-citizens will abundantly justify their most sanguine expectations and the obligations they have incurred.

They set out with a spirit of determination that their fair should be second to none in the State, and by untiring industry, zealous devotion to the work, individual sacrifice and liberality, a comprehensive idea of what was required to be done, they have worked up to the point of opening this temple of industry, in which are displayed such a wonderful variety of the arts and products of the skill and industry of our fellow-citizens, which is but one feature of the fair.

And while we point with pride and pleasure to the general attractiveness of this exhibition, so eloquent of the ingenuity, taste, and enterprise of our people, we have also to invite your attention to another department now open at the Oakland Trotting Park, where will be found a display of live stock—horses, cattle, sheep, swine, poultry, etc.—which it is safe to say has never been excelled in any one exhibition in the State.

There, also, will be found displayed a very large variety of agricultural and labor-saving machinery, immensely valuable as showing the result of ceaseless industry and study in this important branch

of mechanical skill, as well as the promptness with which our earnest and intelligent tillers of the soil avail themselves of the latest improvements and the most perfect facilities for securing the largest returns from the earth at the smallest expenditure of money, time, and labor.

There, too, during the week, will occur a series of most interesting competition in the speed of horses for the very liberal premiums and purses that have been offered.

I most earnestly invite all to the Park and see what a city of buildings have been erected there within the last four weeks, for the accommodation of the stock now on the ground; a ride there will satisfy you that the Association has not confined its enterprise to this department alone, but has been more vigilant, if possible, there than here, in providing for the comfort and convenience of its visitors and competitors in that department.

And now, in declaring this first annual exhibition open, it only remains for me to remind you that it is the first; and while the Board of Directors take pride in the apparent perfection of the arrangements, and feel justified in saying that there will be manifested imperfections which must be attributed only to a lack of experience of those charged with the duties of planning such a multiplicity of parts, yet all in one. But as this is only the first of an annual series of similar exhibitions, we shall rely confidently on the indulgence of our friends for any such defects that may be developed, with the assurance that we hope to profit by our experience and give a more perfect entertainment another year.

But in order to do that we must be permitted to count on the continued coöperation of the friends of this enterprise who have so generously contributed their stock and products to make this display complete, and I now call for the enlistment of all the activities and energies of all our people.

Let us strive together to make this the grand annual gathering of the entire industrial portion of this great center of population, an object well worthy the attention of all citizens, remembering that improvement is the great object of these industrial exhibitions. To accomplish the greatest good with the means afforded them, has been and is the password of the officers and managers of this Association.

To do even-handed justice between each and every exhibitor is the most ardent wish of every member and officer of the Board, and I now assure you that they will do all they can on their part to conduct the fair to a termination which shall be as satisfactory as its beginning is auspicious.

These fairs can be made of mutual profit and improvement, and the means of bringing our people together in closer bonds of friendship and neighborly love.

ANNUAL ADDRESS

DELIVERED BEFORE THE GOLDEN GATE DISTRICT AGRICULTURAL FAIR ASSOCIATION, AT THE PAVILION, ON THURSDAY EVENING, SEPTEMBER TWELFTH, EIGHTEEN HUNDRED AND SEVENTY-EIGHT.

BY REVEREND DOCTOR EELLS, OF SAN FRANCISCO.

MR. PRESIDENT, LADIES AND GENTLEMEN: With no time for worthy preparation, and almost under protest because of the injustice to you, if not to myself, I have consented, since this exhibition commenced, to take this place to-night, which we all hoped would have been filled by one far more able to meet your wishes on an occasion of so much interest. Had I been invited to deliver a religious or literary address, pressed as I am by my other duties, I should certainly have declined, but I confess that the urgent courtesy of your committee received some emphasis from my willingness sometime to come before you in some other relation than that of a clergyman, and no opportunity could be more pleasant to me than is afforded by the platform from which I now speak. For the interest of this fair is not to be limited to those who bring their various products for display and generous competition; nor to those who are themselves engaged in those employments which may gain stimulus or profit from what they here see; nor to those who seek healthful recreation in the midst of so much that must delight; nor to all these combined. All that large number who have both pleasure and pride in what our young State has produced, who rejoice in such a prophesy of what may be produced in years to follow, who have an interest in everything material, while themselves directly concerned with interests no less real, though not wrought out of the earth or furnished by the mechanic arts, meet with their fellow-citizens on this common ground for mutual congratulations. This beautiful and most creditable exhibition belongs to us all, and few of you will gain more from it than will those of us whose wares and products are of such a nature that we cannot bring them here in hope of prizes or diplomas. Among the other reasons this is one why I have consented to speak to you, and am thankful for the privilege of identifying myself with those who desire to make California foremost in the grand procession of the States, as they bring their varied resources to the treasury of the Union they form. At the outset I feel constrained to congratulate all who have conducted the arrangements for this introductory fair upon the marked success that has rewarded their efforts, manifest in every department. If this is the beginning, what will be the displays that shall succeed? If this is the infant, what will be the adult? For we know that the child is the father of the man. A traveler was passing through a European monastery in which were many relics that were shown to visitors. In one room, among other things, was the skull evidently of a baby, and he asked whose skull it was. The guide, to whom all was an old story, paying little attention, answered listlessly that it was that of Saint Patrick. The trav-

eler thought it a little strange that so great a saint should have so small a skull, but said nothing and passed on. After visiting many other rooms they came to one, hours later, in which was another skull, evidently of a man, and he asked whose that was. Forgetting what he had said before, and as listless as ever, the guide answered again, "the skull of Saint Patrick!" "But," said the traveler, "did not you tell me that the one I saw first was that of Saint Patrick?" "Oh, yes," said the guide, now waking up, "but that was his skull when he was a baby!" We know better, and are sure that the skull of the baby will be only the more fully developed skull of the full-grown man; and as we are here introduced to its infantile proportions, we may well anticipate with pride what it will grow to become!

It is one of the special obligations of the early residents of a new country, or a growing town, may I not say, it is one of the special privileges of such persons, to provide ample and permanent facilities for the perpetuation of what they regard as valuable; not that it is their duty so far to anticipate, in their plans and labors, that for years after their successors will have nothing to do but to enter into their labors and enjoy them, but to secure, establish, and anchor what they value, and transfer this to others in such a condition that they can make the bequest even more valuable and abiding when they, in turn, pass it over to those who receive it at their hands. Of this class must those be reckoned who build asylums, schools, churches, and all institutions of public weal of any character where a community has had no such established facilities for profit adequate to their need. They are fortunate men, and should never be unmindful of the opportunity granted them, nor be willing to rest contented, if what may meet these demands is within their power, until this is provided. What they thus establish will become abiding and transforming elements in the advance of a city or a State. It is sometimes thought, sometimes said, that the early population of a place is too heavily taxed, that it ought not to be expected that it will provide for their successors, since the urgent, pressing necessities of pioneer life are enough for one generation. Yet how shall they leave their impress on the land they settle so indelibly and so nobly as by the permanent, comprehensive, wisely started institutions by which a healthy influence may be sent down upon the next generation? They cost money, but the most honorable wealth of men, so situated, is stored in these monumental means of blessing, which they may leave as the witnesses of their wisdom and their worth. Of all men, pioneers, early residents, men who live in a place before society, in all its departments, has crystalized into those various organizations which growth and advance make necessary, should be liberal, broad, far-seeing; and they should count their own gain, in the ratio, not only that they help and profit themselves, but also that they contribute to those whose tread can be so distinctly heard immediately behind them that it is almost startling. Thus we become men for our time; for, in a time and region like ours, none can be men for the time who are not also men for the future, and they are doubly honored who can make such brilliant contributions to the elevation of those who may thus be nobler and better; hence I congratulate you on so auspicious a beginning of an agency that can bear with such stimulating power on all the energies and our resources of State. The enterprise and wisdom thus shown will bear fruit in the richer products of the coming years, as the grandeur and

worth of the superstructure attests the wisdom of those who laid heavy stones in the foundation in expectation of the rising walls and towers. The theme to which I ask your attention, is suggested by the purpose for which this Association has been formed, and by all the objects by which we are surrounded, as we are here assembled; a theme, in one aspect of it, with which I may be properly supposed to have but little acquaintance, yet with which in another aspect I am more familiar than with any other, namely—the worth of work.

If I mistake not, there is eminent occasion, just now, for consideration of this theme, notwithstanding the changes that are so loudly rung on the term, even by the class who say the most respecting it. And rarely with the mass of our people there is occasion for serious thought upon it, because of its relation to all real success. Whatever may have been the cause, there is prevailing among us a spirit which holds work in contempt, which makes idleness respectable, and which is leaving its mark of evil everywhere. There is an inclination to live by one's wits, as it is called; to get money easily and fast; to honor any means by which this may be done, until the good old ways of patient industry and honest accumulation, which have their representatives in such a fair as this, are believed by not a few to be relics of past times, by no means adapted to these days, unless one is content to plod till he dies. Every situation that promises support without toil is thronged with applicants—the trades are avoided; the farm is thought of only as a last resort, and most of the means of living by actual effort, which were honored by our fathers, are voted out of the list of worthy employments. The results of such a prevalent feeling appear on every side, and they will be magnified and multiplied until a change can be wrought in the popular sentiment on the subject. I do not doubt that one of the most formidable barriers to social progress, one of the most serious difficulties connected with political affairs, exists in this disposition to exalt a man who thinks he need have nothing to do, and which seeks to establish grades of society according to the removes from hard, honest toil, until a premium is really offered in public regard for physical and mental sloth. To all this, at least in this place and with these surroundings, you will permit me to enter my earnest protest, not merely as a Christian minister, but as a man with you upon the ordinary plane of life. Were I to speak as a Christian minister alone, I should find material enough for speech in the mere example of Him whom I make my example and Lord. There is significance, not likely to be over-estimated, in the fact that He spent thirty years amidst the scenes of actual work. There is valuable instruction in the unwritten life of the boy, the young man, the industrious, mature mechanic of Nazareth; as valuable of its kind as the precepts which He uttered in His sermon afterward delivered on the Mount. There is worth to us in that unknown shop where He learned and pursued His trade, as real, if not as great, as in the Court of the Temple where He was wont to proclaim His gospel. The lesson of those thirty years was the necessity and dignity of work; and it was fit that He who designed to leave His life as a model, as well as His words for a guide, should spend such a portion of his time in so noble an illustration of the spirit of His gospel. It was God's seal to man's true nobility; God's exhibition in life of what is worthy and best. So that not only as a preacher of that gospel are these sentiments appro-

priate for me, but by the same token, as a man among yourselves, they have a place in my utterance which I would never deny; for it is not what we have, but what we do which makes us noble. Each one has his own inward capability and outward circumstances, and he may define his own course and pursue it, making it no copy, but in its nature original; and he is not, in any proper sense, a man who fails to do this.

John G. Saxe once said, respecting the Green Mountain State, when the products of the other New England States were being enumerated and praised, rather to the disparagement as it was thought of the rough little Commonwealth which the poet loved, "As for Vermont, she is content to build school houses and churches, and raise men!" And he could have passed no worthier encomium upon her. There is urgent need of more men in the world—those who shall make room for themselves, rather than for their possessions—those who shall translate what they are into action, that may be of value to the race (and whose lives shall thus, in their appropriate places, display the force within them in contributions of some kind to the common stock of good). I would not even seem to undervalue what is within a man, either of ability or acquisition, for I believe if one would be successful in any position, his first and often his most intense work must be within. As to all that is to be attainable for him, he must have material and power and skill to use this. Enterprise is not enough; even enthusiasm is not enough; and there have never been more wrecks in the various classes of business than since this has become so generally disbelieved. There must be muscle in the body, force in the mind, but these must be managed with skill and facility, and with reference to the end proposed; therefore, there must be education, appropriate to the sphere one is to occupy, that he may be thoroughly finished for his work. It is to be hoped that this is now seen by more persons than was true a few years ago, and there is promise in this fact; and the necessity for discipline, as well as knowledge, is more generally felt. Nor is this true of those who propose to enter the professions only, or of those who in any department expect to come into intellectual competition with others; he will be a better mechanic or day-laborer whose mind is trained for his station.

A youth begins to feel that he is fast becoming a man at fifteen or sixteen years of age, and his constant desire is to be engaged in a man's work. He wants to be in business, to assume burdens as large as those carried by the men around him, and, therefore, presses into some position where he will have something to do. He has ambition, energy, perseverance, it may be—but he has not that element of success found in a mind properly stored, strengthened, and at command. It is possible that favoring circumstances may enable him to go on, but in most cases reverses, bitter and discouraging experience, must teach him new lessons, and force upon him the training he has neglected to make part of his capital at the start. He found it irksome to gain it; he thought time wasted that was passed before he was at work, forgetting, or not knowing, that this is work—often the hardest work he will ever attempt; yet its difficulty is the reason of its necessity. But my wish now is not so much to speak of or commend education, though so directly bearing on my theme, as to urge the claims of positive work, assuming that most of us at least are prepared to undertake this, in some position, and so

make it a success. Of course I do not refer merely to manual labor; nor, indeed, do I refer to labor at all, as I understand that word, for there is a wide difference between labor and work. Work is our business in the world, our normal employment, that for which we were made, and in which we find our happiness and welfare. Labor is the perversion of work—it is attended with friction, worry, loss. Work is the action of our powers, as the Creator ordained; labor is their action, where every effort is made under protest and at disadvantage. Work will be a large part of the bliss of heaven; for the rest that is mentioned as the portion of its inhabitants, is relief rather than inaction; and no doubt one guarantee of their security, as well as of their joy, is in their perpetual round of obedience, and employment of their powers. Labor will never be known there, and hence the declaration respecting the good who die, "They rest from their labors, and their works do follow them!" This work is not alone of the hands, nor is that idleness which does not present itself with hard hands and proofs of physical toil. There can be as severe, as constant and more exhausting work in the office, the counting-room, the store, as in the shop or on the farm. Yet I would do something to remove the feeling which, as I have said, is opposed to this latter, so that when other modes of employment are flooded, as they seem to be now, men shall not stand with folded hands, and faces of despair, saying they have nothing to do, if they are dependent on their efforts for subsistence, nor excuse themselves, for this season, for idleness, if they are not absolutely obliged to work that they may live. Let us, then, consider first its effect upon individual and general prosperity, that we may learn its worth. A man's highest honor is attained when he has found his place, and is faithful in it; not when he assumes that he really ought to have a place which Providence has not opened to him. Every one is in pursuit of success. Will the private soldier gain it by assuming that he is to have Napoleon's, or Grant's, or Sherman's career, and sitting down until he can see that the door to such a career is open to him? Will the peasant gain it by taking for granted that he is to be a Stewart, or Vanderbilt, or Astor, and waiting till the highway to fortune is opened to him? No, the way to success is the way that is open to a man, not the way that is not open. It may lead into broader avenues after a time, but this will be as he moves on; it may become more delightful and cheering, but this will be in proportion to his progress, and he will learn that, step by step, through the effect of continued work, he must expect success. He may stand at some closed door and knock, and wait, and starve; stern necessity will not be moved by his wishes, or his tears, if she points to the path which he does not like to enter, for she knows that it is mercy to keep him from a way upon which he could not travel, even though he were allowed to begin it. So, too, if prosperity be measured by happiness, habitual industry is essential.

"Did the Almighty," says Lessing, "holding in His right hand Truth, and in His left hand Search for Truth, deign to proffer me the one I might prefer, in all humility, but without hesitation, I would request Search after Truth." We live only as we exercise. Pleasure is the reflex of unimpeded energy, and in action is contained the happiness, improvement, and perfection of our being. There are examples all around us of this truth. You cannot find a really happy idler, unless he has stupefied his nature. This calls out for

something to do, and happiness is the wages of work. He who does most that is worthy, has most; and he is unhappy who does nothing, unless he has shut out the vision of what he might be, and is content to feel none of the duties and aspirations of a man. The industrious tiller of the soil, the mechanic who is begrimed with sweat and dirt, the day-laborer who comes to his home at night with a cheerful spirit, all these are happier, far more to be envied, than he who, in what he deems a higher station, spends his days in scheming how he may live, or in feverish idleness, which, like the rust, eats into the soul and cankers and destroys. Happiness and some form of industry are inseparable, or one has ceased to be a man. Moreover, if we turn from the individual to general prosperity, we find that this is in the ratio of prevailing productive work. A community of consumers must be dependent, and idlers are mere consumers, supported at the expense of somebody's work; getting for no equivalent, what was the product of toil. Let there be a number of these and they become an incubus on society—enough of them will sink a State or nation.

History reveals a series of facts on this point, which should instruct us all. Look for a moment at our own condition. Our resources in natural products, and agricultural improvements, and manufacturing ability are yet largely to be developed. Recent discoveries in science, and consequent revelation of wide fields to be explored in all departments of mechanics, and the increasing demands of the world, promise the richest rewards to those who devote themselves, with careful study and untiring energy to these pursuits. There never was a time or a region of such encouragement to ingenuity and industry. There is no necessity to plod, if one will enter any of these open doors to distinction and success. Now contrast with these facts the throng who pass by all these doors, in their hurry to get money by some shorter and baser means; the throng who are looking for some opportunity to do this, that has not yet come to them; the general dislike for real occupation that may tax them, and it requires no prophet to predict what must be the result after a few years. God has not intended that all our talented, enterprising, ambitious men shall be in the professions, or commercial operators, or stock and money dealers, or merchants; and if they all become such men there will soon be little commerce, and money, and goods, with which they busy themselves. There must be a proper proportion of these classes, but there must also be a proper proportion of thorough, intelligent, thinking, enterprising men in the other departments of effort, or a country like ours will grow weak.

I am convinced that the tide should set in this direction, among us, and those who will throw themselves upon it, strong, thoughtful, energetic, will be borne safely to that unprecedented success, which sits beyond the goal of most who are striving for her rewards and beckons to such men as have the nerve and purpose to reach her. Work, in all the departments of study, of invention, of extensive enterprise, of practical execution—work is the charm that will open wide and effectual doors before us all. But we cannot emphasize too strongly that idleness and plots to gain without pay what others have will hang a heavier millstone round our neck than ever before dragged down a land in the world's history. Further, let us learn its worth from its relation to respectability. The reason why work has fallen into disrepute with many, is not because they really prefer

to be idle, but from a misapprehension of its relation to the highest destiny of man. He who is obliged to work is assigned a lower place, and we hear men say, with a kind of exultation, that they have risen above work. Now the truth is, no one can rise above work. We can sink below it, but never rise above it, for the reason that it has an honored place in the loftiest stations that can be reached—even in the circuit of Jehovah's exhibition of Himself. There lies in the very being of an intelligence this ability to work, and it burns like a fire in one who is good until it is exercised; and the perennial nobleness seen in this exercise is a part of his resemblance to his Almighty Maker. A different view of its respectability would be taken if the truth were realized of the common remarks, that we "must work or steal," for is it not true that if we contribute nothing to the world's stock of goods we have no right to take from it ourselves? At whose expense have we a right to live? By whose efforts are we to be moved on to the end—and from whom gained we permission to levy a tax in our own behalf, upon our fellows, remote or near? No, the respectable men are those who pay their way through life, and at its close leave as much at least as they have taken; not those who think the world was made in vain if not for them. And in this view there is much to be revered in the hard hand and rough, brown face of the workman; there is a title to nobility even in the sweat of him who has an ambition to live as a man should. I have alluded to the attempt to distinguish between mental and manual work, and I think much of the feeling of which I now speak has resulted from this attempt. An English writer has observed: "We want one man to be always thinking, and another to be always working; and we call one a gentleman, and the other an operative; whereas, the workman should often be thinking and the thinker often be working, and both should be gentlemen in the best sense. As it is, we cause one to envy, and the other to despise, his brother, and the mass of society is composed of morbid thinkers and miserable workers." All of us should strive to remedy this evil, and practice and honor both mental and physical labor—resolved to honor our calling, whatever it may be, not be honored by it. For it is not position, gold, equipage, that make the man; but, with God's blessing, it is resolution, contentment, work, that bring us worthy praise. No man can gain a character by hopes, or dreams, or luck. He must hammer and forge one for himself; and in the eyes of those whose opinion is of any worth, respectability inheres in the character, whether it be wrought out by mental or muscular exertion. An idler cannot possess it. Once more, let us learn its worth from its relation to morals. There is a Latin proverb, that "evil thoughts intrude on an unemployed mind as naturally as worms are generated in a stagnant pool," and we find it verified by every day's observation. If you desire to put your son upon the highway that will conduct him in the shortest time to ruin, give him his support, and nothing to do. He will be the prey of temptation, and have leisure for any mischief; he will be the victim of unhappy and restless feelings, from which he will seek relief in dissipation; he will form habits of indolence and recklessness, which will be like anacondian toils, if he ever tries to break their power; and, unless in some rare exception, he will be hopeless of good. There is always hope for a man who earnestly works at anything, for his work is a castle in which he may shut himself and be comparatively safe. Temptation, desire, depravity,

may beleaguer the entrance, but he can bar them out, while satisfaction, peace, and happiness attend him in his toil. The result is a state of mind that inclines toward morality—a thoughtful, tranquil state, in which those virtues spring up which, as they grow strong, will become the allies of whatever is good. Hence, no doubt, is the origin of the maxim of the old monks, “work is worship.” For in this sense, work is of a religious nature—the gospel not announced in words, yet written in the history of the ages, that well-being is to be thus attained. Public morals have suffered from nothing more than from the idleness of men. It is the bane of society, opening the floodgates of evil that rushes over whatever may be in its path—of which no sadder testimony has ever been furnished than has come to our knowledge within these last few years. Idleness is the vortex in which a throng of young men and women have been engulfed, accounts of whose ruin have crowded our papers. Idleness, the indisposition to get an honest living by work, is the cause of thefts, and robberies, and burglaries, and counterfeiting in such amount that reform schools and prisons are overflowing. Idleness heads the train of drunkards, and gamblers, and swindlers, whose name is legion. Idleness hardens the heart, dissipates good impressions, maintains ignorance of the Bible, refuses to obey God, and throngs the way to death. For the sake of those who are in danger, and for the sake of morality at large, we ought to do all in our power to cultivate a desire to work among all classes of our people, and especially among our young. Why, look around you; do you find any appliances in nature for inaction? Does nature provide for stagnation, or permit a vacuum? Look over the universe; do you see any idlers except among men? The very system, of which we form a part, allows no drones, and by its action it will force them to service, or secure their ruin.

“What is a man, if his chief good, and market of his time,
Be but to sleep and feed? A beast, no more.
Sure, He who made us with such large discourse,
Looking before and after, gave us not
That capability and God-like reason, to rust in as unused.”

Rousing, stimulating influences are all around us. Motives that should stir our loftiest ambition call on us to work. Such men our age demands, to control its business; to advance its interests; to scatter light over the nations; men too earnest in their lofty purposes to become victims of vice; too busy in worthy action to be led astray by villainy; too anxious to bless the race to waste time or effort on what is worthless. There are hidden forms of beauty and worth on every side, which work can bring out. Every one of us may plant a tree which, though rooted in our personal need, may renew its blossoms and fruit long after us, for others to enjoy and gather, year by year. Every one of us may till the soil, and scatter seed, the harvest of which shall cause those unborn to be thankful that we have lived. Every one of us can make his work to be his bequest to the great future, and the noblest men are they who thus found their life and work in the advance of all! To such men, no place is high or low, but the reward is as it shall be filled. What honor shall be his who, in any station, shall have wrought out a life of heroic deeds. His work becomes his epitome. In it will be gathered all of morality, and intelligence, and patience, and perseverance, and insight, and ingenuity, and energy he has possessed; and he shall prove that

all human souls have marvelous powers wrapped up in them, and these powers have scope, and reward, and honor everywhere! Deeds are greater than words. Deeds, as the outcome of work, when they are worthy, are the translation of the soul into sublime and abiding proofs that we have not wasted life. For

“ We live in deeds, not years: in thoughts, not breaths;
 In feelings, not in figures on a dial.
 We should count time by heart-throbs. He most lives
 Who thinks most, feels the noblest, acts the best.”

Gentlemen of the Fair Association, you have contributed, in a manner which all good citizens should appreciate, towards the object which I have thus imperfectly brought before you. We stand in the midst of products which are themselves the beautiful proofs of the worth of work; and the design you have, by this means, to stimulate and cultivate, especially within the domain of agriculture and art, a love for work, and a purpose to make it more and more profitable, both to the worker and to the public, deserves the highest praise. Our homes, in a climate so genial that it has become proverbial; in a State, so rich in possibilities of culture and discovery, that its name is almost a synonym for gold; in an age which, though inclined to be boastful, can hardly exceed the facts in the enumeration of its advantages, should be the most charming, and refined, and beautiful homes on earth. Our people, so bountifully blessed of heaven, should be the model people in all that can make manhood worthy of all mankind. Peace, plenty, piety, should here abide, if nature's lessons are heeded and obeyed. From year to year, you will gather the symbols of these guardian spirits, both for the admiration and inspiration of every class of our citizens; and these shall long be witnesses that varied, productive, skill-guided work is the grandest element of success that California exhibits for the imitation of the world.

Witness the hands of the Directors of the Golden Gate District Fair Association, at the City of Oakland, December first, eighteen hundred and seventy-eight.

TRANSACTIONS

OF THE

SONOMA AND MARIN DISTRICT AGRICULTURAL SOCIETY

1878.

ANNUAL REPORT.

To the Hon. Robert Beck, Secretary California State Agricultural Society:

I herewith transmit to you the twelfth annual report of the transactions of the Sonoma and Marin District Agricultural Society, for the year eighteen hundred and seventy-eight, including the list of the premiums awarded at the annual fair, and an itemized statement of the total receipts and disbursements for the year.

During the year the Society erected an art gallery, adjoining the Pavilion, twenty-four by eighty feet, well constructed and lighted by skylights. It proved a great addition to the attractions of the Pavilion. The exhibition of stock and agricultural products was larger than ever, and the fair of the Society, year by year, commands more of the attention of the farmers of the district.

Respectfully submitted.

E. S. LIPPITT, Secretary.

PREMIUM LIST.

Following is a correct list of the premiums awarded :

THOROUGHBRED HORSES.

- G. H. White, best stallion, four years old and over, Ironwood, diploma and \$20.
- A. L. Grigsby, best stallion, three years old and under four, David Atchinson, \$15.
- J. B. Chase, best stallion, two years old and under three, Warwick, \$12.
- Robert Crane, best stallion, one year old and under two, Wheatley, Jr., \$8.
- E. Denman, best mare, four years old and over, Demoret, \$15.
- J. B. Chase, best mare, three years old and under four, Folly, \$12.
- J. H. McNabb, best mare, one year old and under two, Avis, \$6.
- E. Denman, best suckling horse colt, Prince, \$5.

GRADED HORSES.

- John Pfau, best stallion, four years old or over, Eureka, diploma and \$15.
- B. E. Harris, best stallion, three years old and under four, Excellence, \$12.
- U. P. Quackenbush, best stallion, two years old and under three, Bayswater 2d, \$8.
- Robert Seavey, best stallion, one year old and under two, Billy Hayes, \$6.
- William Bihler, best mare, four years old and over, Molly, \$12.
- James Biggins, best mare, three years old and under four, Kitty Watson, \$9.
- Peter Lawler, best mare, two years old and under three, Flora, \$7.
- Lewis Faught, best mare, one year old and under two, Belle, \$6.
- Robert Crane, best suckling horse colt, Wade Hampton, \$5.
- E. J. Fowler, best suckling mare colt, Molly D., \$5.
- John Pfau, best stallion and six colts, Eureka, \$20.

HORSES OF ALL WORK.

- William Bihler, best stallion, four years old or over, Gray McClellan, diploma and \$15.
- C. C. Champlin, best stallion, three years old and under four, Tiger Whip, \$12.
- Bayard Slusser, best stallion, two years old and under three, Mark West, \$8.

John Pfau, best stallion, one year old and under two, Ingraham, \$6.
 T. M. Chapman, best mare, four years old and over, Kate, \$12.
 T. Robinson, best mare, three years old and under four, Fannie Morgan, \$9.
 W. D. Bliss, best mare, two years old and under three, Maggie, \$7.
 Page Brothers, best mare, one year old and under two, Natia, \$6.
 A. Peterson, best suckling horse colt, Captain, \$5.
 Robert Crane, best suckling mare colt, Betty, \$5.
 Joel Merchant, best stallion and six colts, Geo. M. Patchen, Jr., \$20.

DRAFT HORSES.

Hill & Company, best stallion, four years old or over, Duke de Chartres, diploma and \$15.
 Theo. Skillman, best stallion, three years old and under four, Tornado, \$12.
 Theo. Skillman, best stallion, two years old and under three, Duke, \$8.
 T. M. Chapman, best stallion, one year old and under two, Pedro, \$6.
 David Stewart, best mare, four years old and over, Belle, \$12.
 A. Pharris, best mare, three years old and under four, Lucy, \$9.
 H. Meacham, best mare, two years old and under three, Susie, \$7.
 W. Dabney, best mare, one year old and under two, Nellie, \$6.
 J. A. Payton, best suckling horse colt, Sultan, Jr., \$5.
 Page Brothers, best suckling mare colt, Duchess, \$5.
 Hill & Company, best stallion and six colts, Duke de Chartres, \$20.

ROADSTERS.

Fuller & Hopkins, best stallion, four years old or over, Edwin Booth, diploma and \$15.
 E. Moore, best stallion, three years old and under four, Copperhead, \$12.
 Richard Crane, best stallion, two years old and under three, Silas Booth, \$8.
 S. H. Torrence, best stallion, one year old and over, Col. Torrence, \$6.
 George Faith, best mare, four years old and over, Nellie McClellan, \$12.
 David Stewart, best mare, three years old and under four, Annie, \$9.
 S. H. Torrence, best mare, two years old and under three, Alexandria, \$7.
 John Pfau, best colt, one year old and under two, sired by a roadster stallion, Lizzie Ingraham, \$6.
 P. Perry, best suckling mare colt, Mary, \$5.
 Geo. Faith, best stallion and six colts, Gen. McClellan, \$20.

CARRIAGE AND SADDLE HORSES.

O. F. Westover, best matched carriage team, owned and used as such by one person, Minnie Mac and Lady Mac, \$15.
 Ben. E. Harris, best single buggy horse, Rocket, \$7.
 J. J. Lowery, best saddle horse, Gil, \$5.

THOROUGHBREED CATTLE.

P. J. Shafter, best Durham bull, four years old or over, Star Duke, \$20.
 Page Brothers, best Durham bull, two years old and under three, El Medico, \$10.
 Page Brothers, best Durham bull, one year old and under two, Kirkingham Prince, \$8.
 J. B. Redmond, best Durham bull calf, Little Pet, \$5.
 Page Brothers, best Durham cow, four years old or over, Nonie Richardson, \$5.
 J. B. Redmond, best Durham heifer, one year old, True Heart 2d, \$5.
 P. J. Shafter, best Alderney bull, four years old, Surprise, \$20.
 Wm. Sexton, best Alderney bull, one year old, Young Keystone, \$8.
 P. J. Shafter, best Alderney cow, four years old, Roumania, \$15.
 P. J. Shafter, best Alderney cow, three years old, Lady Blanche, \$10.
 P. J. Shafter, best Alderney cow, two years old, Olema, \$8.
 Frank Meacham, best Devon bull, four years old, Dick, \$20.
 J. R. Rose, best Devon bull, one year old, Pedro, \$8.
 J. R. Rose, best Devon cow, four years old, Fairy, \$15.
 J. R. Rose, best Devon cow, three years old, Ruby, \$10.
 J. R. Rose, best Devon cow, two years old, Polly, \$8.
 J. R. Rose, best Devon cow, one year old, Cherry, \$5.
 A. Higgins, best Ayrshire bull, four years old, Major Wentworth, \$20.
 J. B. Lewis, best Ayrshire bull, three years old, General Fremont, \$15.
 E. R. Charles, best Ayrshire bull, two years old, Billy Carr, \$10.
 A. Higgins, best Ayrshire cow, four years old, Kitty Clyde, \$15.
 A. Higgins, best Ayrshire heifer, Dolly Varden, \$5.
 A. Higgins, best Ayrshire calf, Duke, \$5.
 J. R. Rose, best thoroughbred herd of not less than six animals, and not less than one male, \$20.

GRADE STOCK.

R. Harris, best bull, four years old and over, Jim, \$15.
 Allie Hill, best cow, four years old and over, Rosa, \$10.

Page Brothers, best cow, three years old and under four, Mamie, \$8.
 Page Brothers, best heifer, one year old and under two, Miss Mullaly, \$4.
 Page Brothers, best heifer calf, Jennie, \$3.

THOROUGHbred SHEEP.

Page Brothers, best five French Merino ewes, \$10.
 Page Brothers, best Spanish ram, \$10.
 R. H. Crane, best Southdown ram, \$10.
 Wm. Hill, best five Spanish ewes, \$10.
 Page Brothers, best five French Merino ewe lambs, \$5.
 Page Brothers, best five ram lambs, \$5.
 R. Crane, best five ewe lambs, \$5.

GRADE STOCK.

Page Brothers, best ram, \$8.
 Page Brothers, best five ram lambs, \$4.
 R. Crane, best five ewe lambs, \$4.

GOATS.

S. A. Rendall, best Angora goat, diploma and \$10.
 S. A. Rendall, best three Angora does, \$10.
 S. A. Rendall, best four Angora kids, \$5.

SWINE.

George Campbell, best Berkshire boar, \$8.
 G. P. Baxter, best Berkshire sow with five pigs, \$5.
 Geo. Campbell, best five pigs of any breed, \$5.

GRADE STOCK.

G. D. Green, best boar, \$5.
 G. D. Green, best sow, \$5.
 R. Crane, best five pigs, under six months old, \$5.
 G. D. Green, finest and fattest hog, \$5.

PURE BRED POULTRY.

Morris Brothers, best exhibit, not less than five varieties, \$10.
 R. Crane, best lot of Light Brahmas, not less than three, \$2 50.
 Morris Brothers, best lot of Dark Brahmas, not less than three, \$2 50.
 Allie Hill, best lot of Buff Cochins, not less than three, \$2 50.
 R. Crane, best lot of White Cochins, not less than three, \$2 50.
 Morris Brothers, best lot of Black Cochins, not less than three, \$2 50.
 Morris Brothers, best Partridge Cochins, \$2 50.
 Morris Brothers, best lot of Silver-Spangled Hamburgs, not less than three, \$2 50.
 Morris Brothers, best lot of Black Spanish, not less than three, \$2 50.
 Morris Brothers, best lot of White Spanish, not less than three, \$2 50.
 James Laughlin, best lot of Houdans, not less than three, \$2 50.
 Mrs. J. Button, best lot of Brown Leghorns, not less than three, \$2 50.
 Morris Brothers, best lot of White Leghorns, not less than three, \$2 50.
 T. B. Cary, best lot of game, \$2 50.
 Isadore Walker, best lot of Japanese Bantams, \$2.
 J. P. Bodehaver, best lot of Bronze turkeys, \$3.
 Morris Brothers, best lot of Dominiques, \$2.
 Morris Brothers, best lot of Sultans, \$2 50.
 Morris Brothers, best lot of White-crested Polish, \$2.
 Miss N. Symonds, best lot of geese, \$3.
 R. Crane, best lot of ducks, \$2 50.

AGRICULTURAL PRODUCTS.

J. C. Purvine, best sack of Australian wheat, not less than one hundred pounds, \$5.
 H. Gaston, best sack of Chili wheat, not less than one hundred pounds, \$5.
 L. W. Walker, best sack of wheat, of any other variety, \$5.
 E. R. Charles, best sack of barley, not less than one hundred pounds, \$5.
 John Kendall, best sack of rye, not less than one hundred pounds, \$5.
 H. Gaston, best sack of oats, not less than one hundred pounds, \$5.
 George P. McNear, best sack of wheat flour, one hundred pounds, \$5.
 George P. McNear, best sack of corn meal, fifty pounds, \$3.
 R. Watt, best sack of shelled corn, not less than one hundred pounds, \$5.
 John Quinn, best single variety of potatoes, \$2.
 P. Mullaly, best collection of potatoes, not less than five varieties, \$5.
 H. Meacham, best exhibit of squashes, \$2.
 F. W. Lougee, best exhibit of pumpkins, \$2.
 T. M. Chapman, best exhibit of peas, ten pounds, \$2.
 J. P. Rodehaver, best exhibit of beans, not less than three varieties, ten pounds each, \$2 50.
 W. Gibson, best exhibit of sugar beets, \$2.

- W. Gibson, best exhibit of mangel wurtzels, \$2.
 C. D. Grover, best six blood beets, \$2.
 L. W. Walker, best exhibit of rutabagas, \$2.
 H. H. Garland, best exhibit of corn on the stalk, \$2 50.
 J. Gibbs, best exhibit of tomatoes, \$1 50.
 I. R. Jewell, best exhibit of hops, not less than twenty-five pounds, \$5.
 P. Mullaly, best exhibit of cabbage, not less than five heads, \$2.
 L. Vestal, best exhibit of cauliflowers, \$1 50.
 Robert Crane, best exhibit of watermelons, \$1 50.
 Robert Crane, best exhibit of cantaloupe melons, \$1 50.
 Robert Crane, best exhibit of muskmelons, \$1 50.
 A. Dolpino, best exhibit of parsnips, \$1.
 A. Dolpino, best exhibit of celery, \$1.
 James Loughman, best exhibit of garden vegetables, not less than ten varieties, \$5.

FRUITS, GRAPES, NUTS, ETC.

- M. Gillam, largest and best collection of fruit raised in one orchard, \$20.
 D. M. Winans, best exhibit of apples, \$5,
 J. P. Rodehaver, best single variety, six apples, \$2 50.
 D. M. Winans, best six varieties of apples, five each, \$3.
 Robert Seavey, best single variety, six pears, \$2 50.
 R. Watt, best six varieties of pears, five each, \$3.
 M. Gillam, best six quinces, \$2 50.
 Morris Brothers, best collection of oranges, \$3.
 Morris Brothers, best collection of lemons, \$3.
 Morris Brothers, best collection of grapes, not less than six varieties, raised by one person, \$20.
 H. Talbot, second best collection of grapes, not less than six varieties, raised by one person, \$15.
 G. R. Coddington, best exhibit of peaches, \$2.
 Morris Brothers, best exhibit of foreign grapes, \$5.
 H. Talbot, best exhibit of California grapes, \$3.
 Morris Brothers, largest bunch of grapes, of any variety, \$2.
 Morris Brothers, best collection of figs, ten pounds, \$2.
 S. P. Pierce, best collection of almonds, ten pounds, \$2.
 S. P. Pierce, best collection of English walnuts, five pounds, \$2.

PRESERVED FRUITS, ETC.

- W. J. Hunt, best exhibit of dried fruits, not less than five varieties, five pounds each, \$15,
 C. P. Hatch, best exhibit of dried apples, not less than five pounds, \$3.
 C. P. Hatch, best exhibit of dried peaches, not less than five pounds, \$3.
 George Clark, best exhibit of dried plums, not less than five pounds, \$3.
 Miss Eddie Houx, best exhibit of dried plums, seeded, not less than five pounds, \$3.
 C. P. Hatch, best exhibit of raisins, not less than five pounds, \$5.
 Mrs. George W. Case, best exhibit of jellies, five varieties, \$5.
 Mrs. G. W. Case, best exhibit of preserves, three varieties, \$5.
 Mrs. George W. Case, best exhibit of pickles, three varieties, \$2 50.
 Mrs. T. McGuire, best exhibit of catsup, three bottles, \$2 50.

BUTTER, CHEESE, AND BACON.

- A. Woodworth, best box of fresh butter, not less than forty pounds, \$10.
 George Campbell, second best fresh butter, not less than forty pounds, \$5.
 David Stewart, best packed butter, packed three months, not less than twenty-five pounds, \$10.
 Lang & Haskins, best exhibit of cheese, not less than three, \$10.
 Robert Glenn, second best exhibit of cheese, not less than three, \$5.
 Robert Crane, best exhibit of hams, three or more, \$5.
 Robert Crane, best exhibit of side bacon, three or more, \$3.

WINE, CIDER, ALE, ETC.

- H. Weyl, best exhibit of wines, \$25.
 N. Carriger, best exhibit of port wine, \$5.
 H. Weyl, best exhibit of red wine, \$5.
 G. A. Geoss, best exhibit of white wine, \$5.
 N. Carriger, best exhibit of brandy, \$5.

REPORT OF THE BOARD OF DIRECTORS.

To the Honorable the State Board of Agriculture of the State of California :

GENTLEMEN: The Board of Managers of the El Dorado County Agricultural Society, as required by law, respectfully submit the annexed report of the transactions of the Society for the year eighteen hundred and seventy-eight, including a list of articles exhibited and premiums awarded, the amount of receipts and expenditures, and the objects for which such expenditures have been made.

The eighth annual exhibition of our Society was held at Placerville, commencing on the tenth of September and closing on the evening of the thirteenth.

The Society was organized in the year eighteen hundred and fifty-eight. Several successful fairs were held alternately between Diamond Springs, Coloma, and Placerville. Since eighteen hundred and sixty-two no fair has been held until the present year. Several ineffectual attempts had been made to reorganize the Society, when a few public-spirited gentlemen took hold of the matter, called a meeting, reorganized the Society, and located the same permanently at Placerville, in September, eighteen hundred and seventy-seven, with a full board of officers.

The Society has expended in grounds, buildings, and improvements, including a race-course and grand stand, the sum of ten thousand one hundred and eighty dollars and eighty-five cents, as will be seen by the Secretary's report.

It is a pleasure to state that every effort on the part of the Board of Managers has been seconded by a generous people, and demonstrates the interest felt by our citizens in the establishing our Society upon a permanent basis.

The eighth annual fair was largely attended by citizens from all parts of our county, and many from adjoining counties. The attendance at the race track and stock grounds was far beyond the expectations of the officers.

The Sierra Hall, or Skating Rink building, was used for the Pavilion, and as an evidence of the interest manifested by the people, was literally crowded during each evening.

The number of entries at the Pavilion exceeded all calculation. The display of fruit, vegetables, and cereals was magnificent, while many of the articles, in all departments exhibited, was afterward awarded premiums at the State Fair.

The annual address was delivered on Wednesday evening, the eleventh, by Honorable F. M. Pixley, of San Francisco, in which he says of our exhibition and county:

"My memory of El Dorado antedates that of most of you. I know its mountains and its valleys, its cañons and its gulches, and its gravel beds, where treasures hid themselves. I know its forests and its valleys, for I have delved and toiled for gold in its river bottoms and on its mountain sides. I know its soil and climate. From this county came the revelation of the new dispensation for which men prayed. The promised Messiah was never in his coming welcomed with so glad an acclamation as the announcement that in the tail-race of Sutter's saw-mill gold in quantities had been found.

The brightest and best of the young men of our country gathered here, and it was here the soil gave up its wealth; mountain, glen, and cañon poured forth their treasures, and when the gold stream weakened in its volume the hills and valleys beckoned you to woo them, and promised you an ample dowry of fruit and grain. We may not compute the minted millions of its golden wealth that is poured into the laps of you, its pioneers. And now, to-day, this week, as I drive over the familiar places, I observe your farms and orchards, your fields and vineyards; I see in your exhibition such a display of fruits, I taste such wines, I see such promises of abundance, and in your faces such evidences of health, in your forms such strength, in your sons and daughters such signs of intelligence and beauty, that I am led to wonder and inquire: Why do I hear the complaint that times are hard and business is depressed? I stood to-day on one of your hill-tops—an orchard budding with such luscious fruit as I never saw elsewhere, vines loaded with clustered grapes, a cottage home embowered with flowers—and I remember standing in the same place twenty-nine years ago, kicking the toe of my boot into the red soil and wondering if it would grow potatoes.

“Plant El Dorado County amid the glens of Scotland, amid the Alps on the plains of Lombardy, within the dykes of Holland, and give to it a population of French, German, Italian, Swiss, Belgian, Austrian, Slav or Hun—make them the owners of the fee of the soil, and do you think they would complain of hard times?”

“What I have said of El Dorado applies to California—to the Pacific Coast. Rich in everything—in forests, fisheries, mines, fruitful lands, rich in the opportunities for homes, farms, comforts, a land of health, a land of plenty, a land of inexhaustible resources, a land of liberty, of freedom of thought, freedom of conscience, and freedom of action under the law.

“When I think of this land of marvelous wealth and boundless opportunity, this climate that presents no extremes of heat nor cold, this land where a primeval race could subsist and multiply upon the fishes that crowded its streams, the animals that abounded in plain and forest, the fruity nuts of its pine trees, the grain of its hill-sides, and the berries of its river bottoms, I ask, ‘What is the matter?’ It is not the country. The tendency of the times is for families to flee from the country and to crowd the cities. The most independent, dignified, and honorable life a man can lead is upon some of God’s unincumbered acres, where intelligence prevails and contentment dwelleth. The best population in any country is that which lives upon and tills its own acres.”

To conclude: Our fair was a grand success, and shows that the people generally are determined to maintain the efforts of the Board of Managers in fostering a competition towards improving our products, mechanical skill, fine stock, and all the varied industries which tend to build up our county, and to show to other sections of our State, and to our Eastern friends, that in the near future, with climate unsurpassed and soil capable of producing everything necessary for man or beast, with lands free for homesteads, that old El Dorado County will be the most desirable of the foothill counties in our State for the emigrants from the Eastern States and Europe to build themselves homes.

C. H. WEATHERWAX,
Financial Secretary.

To the Honorable Board of Directors of the El Dorado County Agricultural Society:

GENTLEMEN: We, the undersigned committee, appointed to examine the financial report of the El Dorado County Agricultural Society for the year eighteen hundred and seventy-eight, respectfully represent that we have compared the same with the books of the Society and find it correct.

All of which is respectfully submitted.

PLACERVILLE, November 30th, 1878.

H. S. MOREY, }
WM. WILTSE, } Committee.

Attest: C. H. WEATHERWAX, Financial Secretary.

ANIMALS EXHIBITED AT THE PARK.

TRANSACTIONS

OF THE

Siskiyou District Agricultural Society

1878.

OPENING ADDRESS

DELIVERED BY P. G. STRICKLAND, PRESIDENT OF THE SISKIYOU COUNTY
AGRICULTURAL SOCIETY, OCTOBER SECOND, EIGHTEEN HUN-
DRED AND SEVENTY-EIGHT.

LADIES AND GENTLEMEN: It is my duty, as President of the Siskiyou Agricultural Society, to extend to you all an earnest and cordial welcome to this the thirteenth annual exhibition. Another duty would be to give a concise statement of the present condition of the Society, its future prospects, and what is needed to make our fairs attractive, useful, and instructive.

It is not necessary for me to rehearse the history of this district to make it apparent to you that from our infancy, as it were, we have been on the decline; or, in other words, our greatest prosperity as a money-making community, and the largest population since our first settlement, covered the first four or five years of our existence as counties. Many of our hills and gulches were then the busy marts of temporary industry, where hundreds received golden reward for their energy, while our fertile valleys, untouched by man, wore beautiful robes of flowers, the product of virgin soil. How changed now the picture! Impoverished earth yielded golden gods and became exhausted. Fertile valleys became pregnant with the homes of sturdy, industrious tillers of the soil, and now bear the fruits of life. With these changes what are our wants? We want permanent population. Permanent populations want good society. Good society requires educational facilities in all their forms. Where does education commence, or where does it end? It commences with our existence, and ends with our lives. What are the highest forms of education? Those which tend to elevate mankind most, and to make human life most desirable. Thus, industry is the foundation, intelligence the motive power, and moral obligation to our fellow-man our guide. Our annual fairs elucidate these questions. What should a fair be? It should be an annual gathering of communities to offer thanks to our God, the directing power of this so little known world. It is the time when we should spend a week in jubilating, and show by our merry faces and merry actions that we are thankful to Mother Earth for her bounties, as from earth all things come and all must go. It should be the time to review all the transactions of the year. It is the time for the farmer and mechanic to meet face to face and consult upon the merits of agricultural machinery, and to make the suggested improvements. It is a time for making a grand coöperation of all our interests—financial, moral, and social. It is the time when Mother Earth has fulfilled her labor in the great constructive work of nature and is preparing for annual sleep.

What are the results of successful fairs? Why, sirs, the very atmosphere illuminated by the happy, smiling faces of old and young, who take an interest in these exhibitions, make us feel hap-

pier, and make the burdens of life lighter. To the farmer it increases his knowledge, makes him conversant with the wants of the country, and enhances the value of his property. There is an old French proverb that aptly illustrates the benefit that the farmer receives from this source: "The more intelligence and knowledge the man possesses, the more his land is worth per acre."

In the State of Georgia, in eighteen hundred and forty-six, a gentleman purchased a large tract of land, and discussing some ways of making it available with some friends, some one suggested that he locate and start a State Agricultural Society. Eight prominent men of the State signed a call for a grand State Agricultural Fair. Three of them were present at the meeting. Seventy dollars were awarded for premiums. The fair was held in an old blacksmith shop at a cross-road. The exhibits consisted of half a dozen quilts, a load of pumpkins, sweet potatoes, and a jackass. In eighteen hundred and seventy-six the State Fair of Georgia awarded thirty thousand dollars in premiums, thus showing the interest that has been taken and the advancement that has been made in the last thirty years.

The State Fair of California is earnestly striving for the best interests of the State. This district fair is under obligations to our honorable Representative, Dr. Ream, and to Mr. Boruck, President of the State Society, for the State aid which we now receive. We are receiving many courtesies and suggestions from the State Society which are of value to us. The terms of the State aid will expire next year, and we should prepare ourselves to maintain and carry on our fair within ourselves. The importance of this district fair is little understood. The time will come, and that within a few years, when the States of California, Oregon, and Nevada will compete in an inter-State contest for the premiums and purses of the Pacific Coast on the soil of Siskiyou County. Our geographical situation, our climate, and our accessibility to all the three States mentioned, make us the natural center, and warrant me in this prediction. We have a bright future in store. All our Society requires is proper management, and the coöperation of our citizens, to make it eminently successful.

Thanking you for your courteous attention, again I bid you welcome, hoping that the social, intellectual, and useful information acquired by your attendance here will amply repay you for the time and money expended.

FINANCIAL REPORT.

RECEIPTS.

1878.		
May 24	Received of C. Barnhart	\$150 00
Oct. 2	Entries to Purse No. 1	100 00

PREMIUMS AWARDED.

The following is the list of premiums awarded at the thirteenth annual fair of the Siskiyou Agricultural District Society, during the week ending October fifth, eighteen hundred and seventy-eight. The total amount of premiums foot up nine hundred and forty-nine dollars and fifty cents, as follows:

CLASS I.—THOROUGHBREDS.

In this class none were permitted to compete but such as furnished a complete pedigree. The standard of authority for the pedigree of thoroughbred horses were the English and American Stud Books.

Stallions.

Best three-year old and over, S. Booth's stallion, Scamperdown, \$35.
Best one or two-year old, S. Booth's stallion, Dave Kirby, \$25.

Mares.

Best three-year old and over, C. F. Hammond, Molly Miner, \$25.

CLASS II.—GRADED HORSES.

In this department none were allowed to compete but such as furnished satisfactory proof of a cross of either sire or dam with thoroughbreds.

Stallions.

Best three-year old and over, Geo. Stephenson, Sir Walter, eight years old, \$30.
Best one or two-year old, Wm. Eckhart, Anything, two years old, \$20.
E. Flitner, Siskiyou Boy, three years old, \$15.

Mares.

Best three-year old and over, S. Magoffey, Siskiyou Girl, \$20.

CLASS III.—HORSES OF ALL WORK.

Stallions.

Best three-year old and over, Wm. Eckhart, Fulton, \$20.

CLASS IV.—DRAFT HORSES.

Stallions.

Best three-year old and over, Jno. B. Rohrer, Breckenridge, \$25.

CLASS V.—ROADSTERS.

Best roadster without regard to sex, J. N. T. Miller, cream gelding John, \$30.

CLASS VI.—ROADSTER TEAMS.

D. H. Hyde, team, Punch and Index, \$25.

CLASS VIII.—COLTS.

Best two-year old or under without regard to sex, I. S. Matthews, Tom Bartlett, one year old, \$15.
S. Oliver, Robert, five months old, \$10.

CLASS I.—THOROUGHBRED CATTLE.

Bulls.

Best three-year old and over, W. J. Evans, Durham bull, Lord Byron, \$25.

Cows.

Best three-year old and over, J. R. Kenyon, Devon cow, Belle, \$15.

CLASS II.—GRADED CATTLE.

Best cow of any age, J. R. Kenyon, Susie, \$15.

CLASS III.—SWEEPSTAKES.

Best bull of any stock or age, W. J. Evans, Lord Byron, \$15.
 Best cow of any stock or age, J. R. Kenyon, Susie, \$10.
 Best calf of any stock or age, C. McNulty, Hattie, five months old, \$10.

SHEEP.

Best ram two years old and over, J. B. Rohrer, French Merino ram, Big Ben, \$10.
 W. J. Evans, Spanish Merino ram, Dick, \$10.
 J. B. Rohrer, graded sheep, \$5.

SWINE.

Best boar under one year, J. P. Woods, County Fair, \$5.

HOUSEHOLD IMPLEMENTS.

F. R. Griffin, washing machine, \$2.

VEHICLES.

L. Swan, best two-horse family carriage, \$10.
 L. Swan, best top buggy, \$8.

FANCY GOODS AND NEEDLE-WORK DEPARTMENT.

Mrs. O. D. Cornish, best silk Ottoman cover, patchwork, \$2 50.
 Miss Hattie Hager, best worsted crochet, \$2.
 Mrs. E. Whitney, best cotton crochet, \$2.
 Mrs. F. Rogler, best silk embroidery, \$3.
 Miss Hattie Hager, best table-spread, \$2.
 Mrs. J. Urlings, best cotton embroidery, \$1.
 Mrs. L. T. Williams, best lace embroidery, \$1.
 Miss Jennie Green, best braid embroidery, \$2.
 Mrs. E. H. Autenreith, best wax-work, \$5.
 Mrs. E. H. Scofield, best leather work, \$2 50.
 Mrs. E. H. Autenreith, best hair work, \$2 50.
 Mrs. H. B. Green, best moss work, \$2.
 Mrs. F. J. King, best sea moss work, \$2.
 Mrs. H. C. Tickner, sea moss work picture, \$2.
 Mrs. Heybrook, best bead work, \$1.
 Miss Dora Junker, best picture in worsted work, flat embroidery, \$5.
 Miss Mary Calhoun, best picture in worsted work, raised embroidery, \$5.
 Mrs. H. Kessler, sofa pillow, \$2 50.

J. C. White, Monterey County—Phil. Sheridan, premium.

MARES.

Four years old and over.

P. Kilburn, Monterey County—Birdie, premium.
J. G. Sanchez, San Benito County—Fanny.

Three years old.

J. C. Storm, Monterey County—Dolly Vernon, premium.

HORSES FOR ALL PURPOSES.

STALLIONS.

Three years old and over.

James Delaney, Monterey County—Vermont, Jr, premium.
James Delaney, Monterey County—Thomas Elmo.
John Pfau, Petaluma—Eureka, diploma.
S. Lyons, Monterey County—May Boy.

Two years old.

A. J. Oughletree, Monterey County—Young Defiance, premium.
J. G. Sanchez, San Benito County—Billy Matthews.

One year old.

W. W. McCoy, Monterey—Boston Jim, premium.

Suckling colts.

G. Auzar, San Benito County—Emerson Chief, premium.
Wm. Brumwell, Monterey County—Membrino, Jr.

MARES.

Three years old and over.

R. Corey, Monterey County—Dolla, premium.
 S. Lyon, Monterey County—Nettie.
 H. Corey, Monterey County—Belle.
 G. Auzar, San Benito County—Lady Mevis.

Two years old.

G. Auzar, San Benito County—Lalla Rookh.
 G. Auzar, San Benito County—Ella T., premium.
 J. C. Storm, Monterey County—Jennie.

One year old.

G. Auzar, San Benito County—Echo Dean.
 Wm. Brumwell, Monterey County—Giraffe, premium.

Four years old and over.

W. W. McCoy, Monterey County—Tiger Whip, premium.

Three years old.

James Delaney, Monterey County—Ida May, Jr.
 James Delaney, Monterey County—Lady Ellen.
 W. W. McCoy, Monterey County—Lady Griffin, premium.

DRAFT HORSES.

STALLIONS.

Three years old and over.

James Delaney, Monterey County—Black Sam.
 James Delaney, Monterey County—Black George.
 William Ford, Monterey County—Revere.
 William Ford, Monterey County—Fulton, premium.

MARES.

Three years old and over.

FINE ARTS.

- F. Dunham, best exhibit of sign painting, premium.

SPECIAL.

- G. J. Specht, best display of maps, diploma.

RECEIPTS AND EXPENDITURES.

Total receipts \$4,076 31

EXPENDITURES.

Labor and materials	\$843 96	
Paid to Treasurer	250 00	
Purses paid	1,270 00	
Premiums	1,111 00	
Music	150 00	
		3,624 97

Balance in hand of Secretary \$451 35

The balance as above is paid over to the Treasurer of the Society, this twenty-third November, A. D. 1878.

This past season has been a very unpropitious one for holding fairs—particularly in this county. The wide-spread blight in wheat, injuring it greatly in quality and quantity, has caused great depression in business, and taken the enthusiasm out of the farming community. Notwithstanding all this, our fair was very well attended, and we consider it, under the circumstances, a very good success, promising better things for the future.

W. H. CLARK,
Secretary of the Monterey Agricultural Fair Association.

We, the undersigned, a committee appointed by the Board of Directors to examine the above report, have examined the same and find it correct.

WM. VANDERHURST,
JAMES R. HEBBRON,
H. S. BALL,
Committee of Directors.

TABLE OF STATISTICS

FURNISHED BY

WM. MINIS, SURVEYOR-GENERAL OF CALIFORNIA.

TABLE OF STATISTICS.

Industrial and other statistical information, for the year eighteen hundred and seventy-seven, as reported to the Surveyor-General by the several County Assessors, embracing the entire State.

COUNTIES.	Acres of Land Inclosed.	Acres of Land Cultivated.	WHEAT.		BARLEY.		OATS.

REPORT OF THE CITY AND COUNTY ASSESSOR OF SAN FRANCISCO.

ASSESSOR'S OFFICE, SAN FRANCISCO, July 31st, 1878.

To the Hon. William Minis, Surveyor-General of the State of California.

SIR: In obedience to the requirements of law, I herewith submit to you my annual report of the mechanical and manufacturing industries of this city and county, during the year eighteen hundred and seventy-seven.

All of which is respectfully submitted.

ALEXANDER BADLAM,
City and County Assessor.

Amalgamating pan manufactory (see iron foundries)-----	1
Artificial stone manufactories-----	3
Men employed-----	50
Value of manufactories-----	\$120,000
Axle-grease manufactory-----	1
Men employed-----	7
Rosin consumed yearly—barrels-----	1,280
Butter consumed yearly—pounds-----	24,500
Chemicals consumed yearly—pounds-----	20,000
Value of manufactory-----	\$35,000
Barrel manufactory-----	1
Men employed-----	100
Barrels, half barrels and kegs, made annually-----	260,000
Horse power of steam engine-----	60
Barrels made by sugar refineries-----	58,000
Syrup kegs, made by tub and pail factories-----	10,000
Aggregate value-----	\$150,000
Bag manufactories-----	5
Men employed-----	150
Aggregate value manufactured-----	\$1,500,000
Bed spring manufactories-----	3
Men employed-----	30
Copper wire used—tons-----	500
Aggregate value of manufactories-----	\$175,000
Bedstead manufactories-----	5
Men employed-----	225
Lumber consumed annually—feet-----	300,000
Value of manufactories-----	\$100,000
Bellows manufactories-----	2
Men employed-----	10
Bellows manufactured-----	1,500
Value-----	\$30,000
Bedding manufactories-----	7
Men employed-----	300
Value of manufactories-----	\$750,000
Billiard table manufactories-----	5
Men employed-----	30
Billiard tables made-----	240
Value-----	\$60,000

Boot and shoe manufactories.....	56
Men and women employed.....	3,000
Value of manufactories.....	\$2,000,000
Box manufactories—wooden.....	5
Men employed.....	250
Horse power of steam.....	200
Value of manufactories.....	\$1,000,000
Box manufactories—paper.....	4
Men, women, and boys employed.....	40
Number of boxes made annually.....	625,000
Value of manufactories.....	\$30,000
Box manufactories—cigar.....	3
Men, women, and boys employed.....	170
Number of boxes made annually.....	3,000,000
Value of manufactories.....	\$135,000
Brass foundries.....	8
Men employed.....	300
Value of manufactories, including copper used (500 tons).....	\$600,000
Breweries.....	44
Men employed.....	350
Beer made annually—barrels.....	300,000
Hops consumed annually—pounds.....	550,000
Barley consumed annually—tons.....	20,000
Aggregate value.....	\$2,000,000
Broom manufactories.....	5
Men employed.....	110
Brooms made annually—dozens.....	60,000
Value.....	\$250,000
Broom-handle manufactories.....	1
Men employed.....	6
Handles made annually.....	800,000
Value.....	\$12,000
Brush manufactories.....	3
Men and boys employed.....	26
Value of manufactories.....	\$60,000
Candle manufactories.....	3
Men employed.....	120
Candles manufactured—boxes.....	175,000
Value.....	\$450,000
Clothing manufactories.....	12
Men and women employed.....	4,000
Value, including overalls, suits and underwear.....	\$3,000,000
Cigar manufactories.....	200
Men, women, and boys employed.....	4,000
Cigars made annually.....	107,000,000
Cigarettes.....	7,000,000
Cement pipe manufactories.....	2
Men employed.....	115
Aggregate value.....	\$300,000
Cracker manufactories.....	6
Men employed.....	280
Horse power engines.....	108
Aggregate value of manufactories.....	\$1,800,000

Chemical works	3
Men employed	72
